RICHARD WEGENER,
Accountant, Mining Secretary,
AND GENERAL AGENT.
No. 204 Montgomery St., Southeast cor. Montgomery and Pine Sts., San Francisco. 11-m

The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—Eds. Press.

Sales of Mining Shares

For the week previous to Saturday, Aug. 13.

By the San Francisco Stock and Exchange Board, and Pacific Board of Brokers.

IMPORTANT DISCOVERY
— IN THE —
Photographic Art.

Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.

[PATENT APPLIED FOR.]

THE UNDERSIONED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privilges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

☞ The public are invited to examine specimens at my Gallery. ☜

5-tf **JACOB SHEW.**
315 Montgomery street, near Pine.

SCIENTIFIC AND MINING JOURNAL.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

Mechanical and Patent Department.

Free Lectures.—The Pacific Machinists' Union, of this city, are making arrangements to give a course of free lectures, designed es pecially for the beaefit and improvement of the meehanics nud workiag meu. The first lecture of the course will be given hy Snpervisor Rowell, who will he followed by Professor Barstow, Dr. W. Ayer, nnd other gentlemen of established reputation nnd ability, who are well kaown in this community. The project is a most exeellent one, aad cannot fail to result in much substantial good. The time of commeaeement aad the place wbere tbe lectures will be given is not yet deeided npon. The snbject of the first lecture will be "Mechaaical Force." Tbe other subjeets and speakers will in time he duly announced.

The Mechanics' Fair.—The managers of the Meehanics' Fair urge npon all persons who intend to exhibit, to forward their applieations to the Committee, at the earliest possible mo ment, as the space at their command is heiag rapidly taken up. The sooner applieations are received, the better for all concerned, as it will enable the Committee to organize and arrange the different articles offered, and give to eaeh the position aad room hest caleulated to show its merits most effectively. There is no time to loose in this matter. A day or two may disappoint an exhibitor ia securing space in the Pavilion.

A New Fire Escape hae been patented hy A. T. Bellentine, of New York City. The invention coneists of a ladder combined with oae leaf of a window ehutter so as to be conceeled within it, being slid up within it by means of a wrench, and when desired the looseniag of a catch allows it to slide to the ground. The catch or locking appnratus is connected to a fnlse window-sill in such n way as to draw it ont and mnke it project from the true sill as soon as the ladder ie released from the shutter, thns forming a plntform from which to stop on the ladder.

Laroe Boilers.—Messrs. Coffey & Rideon are building two enormons hoilers for Holliday's new steamer, now on the stocke at Hunter's Point. These hoilers nre sufficiently large to nllow a horse and rider to pass through them, provided the rider would stoop a little. Each hoiler is twenty-two feet ten inehes ia length and nine feet four inches in diameter longitndinally, of eliptieal shape. They are intended to generate steam for a three hundred horse-power engine.

New Amaloamatino Pan.—Mr. Walter L. Strong, of this eity, has filed a eaveat through the Patent Ageacy eonnected with this office, for a new amalgamating pan, in which the mullers are caused to revolve ia opposite directions, thns breaking the current nnd producing a thorough and constant mixiag of the pulp.

Desulphurizino Ores.—Mr. Hezekiah Bradford, assignee to Horatio Bogard, of New York city, has obtained a pateat for a new apparatus for deculphnrizing ores, tbe claims in relation to which are stated as follows in the specification papers:—

I claim, first, moving the metallie oree grndually from the cooler to the hotter portioas of a hearth, substantially as epecified, so that the desulphuriziag operation is gradually performed as set forth.

Second, I claim the introduction of steam, or of steam aud hot air combiued, into a chamher over a hearth on which the ore ie gradually heated, substantially as and for the purposes specified.

Third. I elaim a serics of stirrers moved by a chain, in combinatiou with tbe de-sulphurizing hearth, for the purposce set forth.

Fourth, I claim a flap in combination with the stirrers and desulphurizing heartb, for allowing tho stirrers to enter and leave the chamher as specified.

Fifth, I claim a water vessel, to cool the chains and stirrers, as set forth.

Sixth, I claim the arrangement of the circulating pipes, and vessels, in combiuation with the boiler, as described aud for the purposes eet forth.

Business men in New Bedford are giving their attention to manufacturing. Several large factories are building.

Another Quartz Crusher.—Messrs. David Gay and John H. Perkins, of Long Bar, Yuba county, have obtained a patent for a quartz crusher, wherein the attaehment of a water wheel to the side of the erushing wheel, together with a peeuliar combiuation of water conduetiag nprons, is claimed. We are unable to obtain any iatelligible idea, either of the principle or utility of this invention, from the description givea in the pnblished report in an eastern paper. If all Californin inventors would communieato their inventions to us, nad' transact their business tbrough this offiee, it would be greatly to their advaatege, aad would be the means of introducing their improvemeats more directly to the attention of the public. For the short time in which our patent ageaey has been doing busiaess, we have no canse to complaia of a want of patronage—indeed, we have reason to congratulate onrselves apon the surprising inerease of our husiaess in tbnt department. But we desire to see all California inventions presented to the Patent Department and the publie through this office.

Since the above was in type we have met with the following more particular description of the above machine, which is called a "Hydraulic Quartz Crasher:"

"In this novel quartz crushing machine the common Chillian traveling crushing wheels are employed, and the patentees have hit upon the aovel idea of plneing water buckets npon the sides of the wheels, thus converting them into water wheels. The buckets are supplied from a small tank above, which rotates with the wheels, the tank being filled hy a suitable conducting trough. Whea the water is let on, the wheels travel ground in the usual circular quartz trough, without assistance from any other motor. The water is prevented from eatering the quartz trough hy an iageaious arrangement of aprons.

Low's Grain Separator.—Leonard Low of Saerameato has received a patent for a new grain separator of his invention. The *Union* says of it:—

Previous to the fire which deetroyed the Piouecr Mille, Low had constructed oae of his machines, though imperfect ia some respeets. After running with euccess for eeveral months it was destroyed with the building and machinery last fall. On the re-erection of the mills, duriag the piesent season, Low pnt up the improved separator which has been running steadily for some two months, aad works with complete success. It consiste of a series of sieves adjusted on a circular frame, supported by an upright shaft running through the center. Some of these sieves pitch toward the center aad others towards the eireumferenee. Some separate the barley and coarser material, others toward the dust and dirt, aad yet others the broken graine of wheat, etc. The frame does not revolve, but receives a horizontal oscillating motion which effectually keepe the grain astir aad hringe all the eieves in play. The peenliar eoastruction of tbis machine, and the easy motion with which it works, frees it entirely from the jarring effeet which constitutes an objection to many of the separators heretofore ia use. The points on whicb the patent is granted, are: 1st. The arraugement of the inclined screeas in quadrant sets aroand the center shaft substaatially as described aad shown. 2d. The combination of the screens and clutes when the same are arranged aroaad a center shaft and operated by oscillatiag motion substantiinlly aad in the manaer and for the purpose described. 3d. The adjustable etrips in combination with the screea supporters for the purposes of adjusting tbe inclination of the screens substantially as described. 4th. The hopper in combination with the telescopic nozzle and cross-head for the purpose of adjusting the feed of the grain substantially ns described.

Explosion of Gun-Cotton.—Dr. Phipson has addressed the following to the *London Mining Journal*:—"I see in the newspapers tbat a terrible explosioa of gun-cotton.accompanied by loss of life, has lately occurred in the works of Messrs. Prentice & Co. It is supposed to have been caused by a spark from some steel machinery. Photographers will remember that, a year or so ago, the photographic chemist Dorubach lost his life by an explosion of gun cotton, while packing this substance into a cask by means of a wooden pole. Since this sad occurrence I have alrendy twice stated that the explosion which killed M. Leon Dorubach was evidently caused by an eleetric spark. Persons who handle gun-cotton are apt to forget (or, perhaps, are not always aware) that it is one of tbe most electrical substances known, and that friction, far too slight to develop heat enough to enflame it, will develop in gun-cotton so considerable an electric tension that electric eparks may be obtaiued from it."

CAST IRON STEAM BOILERS.

Much interest has been taken by engineers duriag the past two years in the experiments wbich havo been in progress with a new kind of steam boiler, known ns "Harrieon's Cast Iron Steam Boiler," invented some few years ngo in Philadelpbia. These boilers have been nt work for several yeare ia some of the east ern cities, and for over two years in London aad Manehester, England, and according to all accounts, with complete success. The merits of this hoiler were reeently fully eanvassed nt a meeting of the Institution of mechaaical Engiaeers of Birmingham, Eng., where its advantages nppeared to be fully acknowledged. Full reference was made to its successful use in Great Britain.

This boiler is constructed of a large nnmber of hollow east-iron spheres of small diameter, in order to provide great strength against burstiug, and to allow of being safely worked at considerably higher pressures of steam, and to obtaia a larger extent of heating surface in proportion to the weight and external dimensions of the boiler. The spheres are connected by hollow necks, and are cast in sets of four together; a series of theso castings are secured together all in one plane, by long bolts ruaaing through the iaterior of the spheree, the joints being turned and faced by maehinery all to exactly the same gauge, so as to be completely water-tight and steam-tight when the bolts are screwed up. This series of spheres is fixed vertically over the firegrate, formiug one section of the boiler; and a number of these sections are placed side by side nnd end to end, according to the extent of boiler power that is required. The sectioas aro elevated nt the front end to such an inelination ae allows all the spheres to empty themselves when the water is ran off from the lowest point of each section; and this iaclination is fouud to afford ample natural circulation of the water, the feed water being introduced at tbe lowest extremity in all tho seetione, while the steam is taken off from the highest by means of transverse feed and steam pipes eonnected ta each of the sections. The boiler is filled with water to eboat two-thirds of its content, the upper spheree being employed for drying the steam. The spheres are each 8 in. outside diameter, and ½ ia. thiek, and have been tested hy hydrnulic pressnre up to 1500 lbs. per square iach. without showing any signs of injury; aad ao case has occurred of aa explosion of any of the epheres, nor have tbey giveu any trouble from leakage at the joints. The boiler possesses eomplete freedom from accumulation of scale, as the whole of tho scale is washed out in small thin fragmeats when the boiler is blown oat at the end of each week, tho total quaatity of water contained in the boiler being very small compared with that in ordiaary boilers of the same power. The result of many months' eontinnous working of the boilers has heea fonad to be that no accumnlation of scale hae taken place ia the epheres, nor have their inner surfaeee required any cleansing since they were put to work; while ordinary boilers, working iu the same situatioa, and with the same water, have speedily become coated with a thick seale, requiring removal with a hammer. The new boiler has been found to give a good evaporative duty; and tho steam is completely dried nnd partly euperheated by the large extent of surface exposed to the heat from the fire by the upper spheres, which form the steam-room of the boiler.

At the meetiag ahove referred to in Birmingham, a speeimen wae exhibited of one of tbe sections of the boiler, and also of the feed and steam pipe connections at top and hottom of the several seetione. Samples were also shown of the small fragments of thia ecale blown out from the hoiler in regular working; and of the thick scale from the interior of an ordinary Lancashire hoilor, nsiag the same water.

A new hoiler for steam engines has heen patented by an Irish inventor of the name of Elsoa. It consists of a number of cast iron bottles, twelve inches in diameter and six feet in length, set in ovens, and connected in their steam and water spaces. Forty-two of these evolve a power of sixty horses. The advantages claimed are the cheapness of construction, durability and freedom from danger of explosion. The inventor is said to have applied his boiler with complete success.

We find the above going the rounds of the papers, both in this and the Atlantic States. The invention appears to be the same, in principle, as the American iuvention. by Harrison, which was made fully three years earlier, and which will be found fully described in auother column.

A Marvelous Mechanical Contrivance.—A Polander, named Herr Nndolski, has arrived iu this eity with a eabinet, manufactured by himself, which puts Lincoln's and the Davenport Brothers,' and all other eabinets entirely in the shade. A private exhibition of this wonderful eabinet was given in the leetnre room of Barnum's Museum this forenoon, preliminary to its public exhibition nt the same place during week. The eabiaet, as it appears on the stage before being opened, is a mahogany ease, four feet six inches in hight, three feet in width, aud two feet thick. From this compaet box, bnt little larger than a good sized traveling trunk, Herr Nadolski draws forth, one after another, the following articles, comprising a complete eet of parlor, diniagroom and bed-room furnitnre:

A judges large table, eight feet long; three books and ornaaent; six chairs; four large card tables; four ladies' work-boxes; a whatnot; a lady's work table, inlaid with straw; an artist's easel; four music stands; a smoking table; a smoking tray; a round toilet table; two Chinese fashion tables; two little fancy tables; two large Chinese lamps, lighted; a footstool; a Chinese toilet table; a faacy toilet table; a ehess table, made ont of forty-nine different classes of wood; a tea tray; a large chandelier, coataining twelve wax lights; a full sized bed aad bedstead, with hangings eomplete; four candlesticks, with lighted caudles; four small flower tables; four flower pots, with flowers; two Chiaese parlor candlestieks with candles n-light; five small Chiaeso lamps, a-light; fourteen fancy boxes; an embroidery frame; a dining table, twelve feet long; with twenty-four covers, laid complete; nine garden chairs; a writing desk; two rulers and bells; a rounnd bed table; a bed lemp; a swing cot; a little drawing room table. A little cese, measuring only four inches high, fourteen iaches long, and eight inches thick, containe 4 large dishes, 28 platee, 6 salt eellars, 30 drinking cups, 34 knives, 24 forke, 24 spoons, a large caadelabra, with 5 wax ligbts; a throne decornted, a lerge throae chair, a large table, inlaid with shelle and glass top, etc.

Each article in the above list is an exquisite piece of workmanship, and the wholo together presents an array of bousehold furniture sufficient to excite the envy of Mrs. Toodles, and to furnish stock in trade for half a dozen auctioneers. It is the most wonderful pieee of mechanieal ingenuity ever eeen in this country, and well deserves n visit from the curious.—*N. Y. Jour. Com.*

Bearino Surfaces.—The London *Mechanics' Magazine*, ia spoaking of hearing surfaces where high speed is employed, says:—

"The fact is, that the brasses will not permit of that amount of looseuese or play which may exist in any other bearings almoet, because of the destructive hammering action which ensues. It ie not eo easy to say why tightening a brass should make it heat; we find in every-day practice that a bearing which supports perhaps 1 cwt. per square inch, without undne friction so loag as it is left moderately elack, will become almost red hot in a few minutes, if an ndditional pressnre of not more than a few ponnds per square inch ie brought on it hy serewing down the cap. Until we ean give n eatisfactory explaaation of this phenomenon, it is not easy to eee how its occurrenee can be guarded against. Meaawhile, it is the source of all the troublo ever met with from a eonnecting rod end. The hest remedy appears to consist ia inerea-ing the surfaee very considerably, and providing an effectaal method of lubricatioa, either by n teleseope pipe from an overhead vessel of oil, in cases where tbe engine stands for a few hours out of the twenty-four, by boring a large cavity in the crank-pipe, aad filling it with tallow, a transverse apertnre conveying the lubricant when melted to the surfaces where its presenee is required. Attention to little matters of detail aad good workmanship are really all that are required to insure the success of any motor runniag at a high speed.

An Important Invention.—The *Piute* says William Frank Stewart, now in Virgiaia city, has nndonbtedly perfected a machine and chemical process hy which the waste of all quartz mills can be worked to yield nearly ae much gold and silver per ton as is saved hy the mills. Experiments have lately been fully and satisfactorily made at one of the beet mills in Gold Hill.

A Torpedo boat is coastructing at East Haven, Connecticut. She will be homb proof, covered with iron plates of a greater thickness than those upon the monitors, aad provided with powerful machiuery.

The annual Fair of the San Joaquin Valley Agricultural Soeicty will be held in Stockton, commencing on Tuesday, September 14th, and continuing four days. Hon. S. W. Brockway, of Mokelumne Hill will deliver tbe address.

New Stamp Duties.

The following is a corrected copy of the new schedule of stamp duties under the revenue law which took effect on August 1st, 1864:—

Acknowledgment of deeds.....exempt
Affidavit.....5 cts
Affidavit in suits or legal proceedings.....exempt
Agreement or appraisement (for each sheet or piece of paper upon which the same is written).....5 cts
Assignment or transfer of mortgage, lease or policy of insurance, the same duty as the original instrument.
Assignment of patent right.....5 cts
Bank checks, drafts, orders, etc, at sight or on demand 2 cts
Bills of exchange (foreign) drawn in but payable out of the United States, each bill, or set of three or more, must be stamped.
For every bill of each set, where the sum made payable does not exceed $100, or the equivalent thereof in any foreign currency in which such bills may be expressed, according to the standard of value fixed by the United States.....2 cts
For every additional $100 or fractional part thereof, in excess of $100.....2 cts
Bills of exchange (foreign) drawn in but payable out of the United States (if drawn singly or in duplicate) pay the same duty as inland bills of exchange.
[The acceptor or acceptors of any bill of exchange or order for the payment of any sum of money, drawn or purporting to be drawn in any foreign country, but payable in the United States, must, before paying or accepting the same, place thereon a stamp indicating the duty.]
Bills of exchange (inland), draft or order, payable otherwise than at sight or on demand, and any promissory note, whether payable on demand or at a time designated (except bank notes issued for circulation and checks made and intended to be, and which shall be presented forthwith for pay't) for a sum not exceeding $100..5 cts
For every additional $100, or fractional part thereof..5 cts
[The warrant of attorney to confess judgment on a note or bond is exempt from stamp duty, if the note or bond is properly stamped.]
Bills of lading of vessels for ports of the United States and British North America.....exempt
Bills of lading, or receipt for goods, to any for'n port 10 cts
Bill of sale of any vessel, or part thereof, when the consideration does not exceed $500.....50 cts
Bill of sale exceeding $500, and not exceeding $1000...1 00
Bill of sale exceeding $1000, for each $500, or fractional part thereof.....50 cts
Bill of sale of personal property (other than ships)...5 cts
Bond, personal, for the payment of money. [See Mortgage.
Bond, official.....$1 00
Bond, for indemnifying any person for the payment of any sum of money, where the money ultimately recoverable thereupon is $1,000 or less.....50 cts
Bond, where the money recoverable exceeds $1,000, for every additional $1,000, or fractional part thereof.50 cts
Bonds—county, city and town bonds, railroad and other corporation bonds and scrip are subject to stamp duty. [See Mortgage.]
Bonds of any description, other than such as are required in legal proceedings, and such as are not otherwise charged in this schedule.....25 cts
Certificates of deposit in bank, sum not exc'd $100..2 cts
Certificate of deposit in bank, sum exceeding $100....5 cts
Certificates of stock in an incorporated company....25 cts
Certificates, general.....5 cts
Certificates of record upon the instrument recorded, ex'pt
Certificates of record upon the book.....exempt
Certificates of weight or measurement of animals, coal or wood, or other articles, except weighers' and measurers' returns.....exempt
Certificates of a qualification of a Justice of the Peace, Commissioner of Deeds, or Notary Public.....5 cts
Certificates of search of records.....5 cts
Certificates that certain papers are on file.....5 cts
Certificates that certain papers cannot be found.....5 cts
Certificates of redemption of land sold for taxes.....5 cts
Certificate of birth, marriage and death.....5 cts
Certificates of qualification of school teachers.....5 cts
Certificates of profits in an incorporated company for a sum not less than $10, and not exceeding $50.....10 cts
Certificates exceeding $50, not exceeding $1,000....25 cts
Certificates exceeding $1,000, for every additional $1,000 or fractional part thereof.....25 cts
Certificates of damage, or otherwise, and all other certificates or documents issued by any port warden, marine surveyor, or other person acting as such.....25 cts
Certified transcripts of judgments, satisfaction of judgment, and of all papers recorded or on file.....5 cts
[N. B.—As a general rule, every certificate which has, or may have, a legal value in any court of law or equity, will require a stamp duty of 5 cts.]
Charter party, or letter, memorandum, or other writing between the captain, owner or agent, of any ship, vessel, or steamer, and any other person, relating to the charter of the same, if the registered tonnage of said ship, vessel or steamer does not exceed 150 tons.....$1 00
Charter party, etc., exceeding one hundred and fifty tons, and not exceeding three hundred tons.....$3 00
Charter party, etc., exceeding three hundred tons and not exceeding six hundred tons.....$5 00
Charter party, etc., exceeding six hundred tons....$10 00
Check, draft, or order for the payment of any sum of money exceeding $10, drawn upon any person other than a bank, banker, or trust com'y, at sight or on demand 2 cts
Contract. [See Agreement.]
Contract—Brokers.....10 cts
Conveyance, deed, instrument, or writing, whereby lands, tenements or other realty sold shall be conveyed, the actual value of which does not exceed $500.....50 cts
Conveyance, etc., exceeding $500, and not exceeding one thousand dollars.....$1 00
Conveyance, etc., for every additional five hundred dollars or fractional part thereof, in excess of one thousand dollars.....50 cts
Entry of any goods, wares or merchandise at any Custom House, either for consumption or warehousing, not exceeding one hundred dollars in value.....25 cts
Entry exceeding one hundred and not exceeding five hundred dollars in value.....50 cts
Entry exceeding five hundred dollars in value.....$1 00
Entry for the withdrawal of any goods or merchandise from bonded warehouse.....50 cts
Gauger's returns, if for quantity not exceeding 500 gallons gross.....10 cts
Gaugers' returns, exceeding 500 gallons.....25 cts
Indorsement of any negotiable instrument.....exempt
Insurance (Marine, Inland and Fire) where the consideration paid for the insurance, in cash, premium notes, or both, does not exceed $10.....10 cts
Insurance (Marine, Inland and Fire) exceeding $10 and not exceeding $50.....25 cts
Insurance (Marine, Inland and Fire) exceeding $50..50 cts
Insurance (Life) when the amount insured does not exceed $1,000.....25 cts
Insurance (Life) exceeding $1,000 and not exceeding $5,000.....50 cts
Insurance (Life) exceeding $5,000.....1 00
Insurance (Life) limited to injury to person while traveling.....exempt
Lease of lands or tenements, where rent does not exceed $300 per annum.....50 cts
Lease of lands or tenements exceeding $300, for each additional $200, or fraction thereof in excess of $300...50 cts
Leases of lands or tenements, perpetual, subject to stamp duty as a "conveyance," the stamp duty to be measured by resolving the annual rental into a capital sum.
Lease of land or tenements, clause of guaranty of payment of rent, incorporated or indorsed, five cents additional.
Manifest for Custom House entry or clearance of the cargo of any ship, vessel or steamer, for a foreign port, if the registered tonnage of such ship, vessel or steamer does not exceed 300 tons.....$1 00
Manifest exceeding 300 tons and not exceeding 600...$3 00
Manifest, exceeding 600 tons.....5 00
Measurers' returns, if for quantity not exceeding 1000 bushels.....10 cts
Measurers' returns, exceeding 1,000 bushels.....25 cts
Mortgage, trust deed, bill of sale, or personal bond for the payment of money exceeding $100 and not exceeding $500.....50 cts
Mortgage, exceeding $500, for every additional $500, or fractional part thereof in excess of $500.....50 cts
Pawnors checks.....5 cts
Pension papers, powers of attorney, and all other papers relating to applications for bounties, arrearages of pay, or pensions, or to receipt thereof.....exempt
Passage ticket from the United States to a foreign port costing not more than $35.....50 cts
Passage ticket from the United States to any foreign port, costing more than $35, and not exceeding $50.....1 00
Passage ticket for every additional $50, or fractional part thereof in excess of $50.....1 00
Powers of attorney to sell or transfer stock, or to collect dividends thereon.....25 cts
Power of attorney to vote at election of incorporated company.....10 cts
Power of attorney to receive or collect rents.....25 cts
Power of attorney to sell, or convey or rent, or lease real estate.....1 00
Power of attorney for any other purpose.....50 cts
Probate of will, or letters of administration, where the value of both real and personal estate does not exceed in the aggregate $2,000.....1 00
For every additional $1,000, or any fractional part thereof in excess of $2,000.....50 cts
Bonds of executors, administrators, guardians, or trustees, are each subject to a stamp duty of.....1 00
Certificate of appointment.....5 cts
Protest upon bill, note, check, or draft.....25 cts
Promissory note—[see bills of exchange, inland.]
Promissory deposit note in mutual insurance companies, when policy is subject to duty.....exempt
Promissory note, renewal of, subject to the same duty as original note.
Quit claim deed, to be stamped as a conveyance, except when given as a release of a mortgage by the mortgagee to the mortgagor, in which case it is exempt.
Receipt for the payment of any sum of money or debt due exceeding $20, or for the delivery of any property..2 cts
Receipt for the satisfaction of any mortgage or judgment or decree of any court.....exempt
Sheriff's return on writ, or other process.....exempt
Trust deed, made to secure a debt, to be stamped as a Mortgage.
Trust deed, conveying estate to uses, to be stamped as a conveyance.
Warehouse receipt for any goods, wares, or merchandise, not otherwise provided for, deposited or stored in any public or private warehouse, not exceeding $500 in value.....10 cts
Warehouse receipt exceeding five hundred and not exceeding one thousand dollar.....20 cts
Warehouse receipt exceeding $1,000, for every additional $1,000, or fraction thereof in excess of $1,000.....10 cts
Warehouse receipt for any goods, etc., not otherwise provided for, stored or deposited in any public or private warehouse or yard.....25 cts
Writs and legal documents·
Writ, or other original process by which any suit is commenced in any court of record, of law or equity...50 cts
Writ, or other original process issued by a court not of record, where the amount claimed is $100 or over...50 cts
Writs, or other processes on appeals from Justices' Courts, or other courts of inferior jurisdiction, to a Court of record.....50 cts
Warrant of distress, when the amount of rent claimed does not exceed $100.....25 cts
Warrant of distress when the amount exceeds $100..50 cts
Writs, summonses, and other process issued by a Justice of the Peace, Police or Municipal Court of no greater jurisdiction than a Justice of the Peace in the same State, exempt.
Writs, and other process in any criminal or other suits commenced by the United States in any State.....exempt
Official documents, instruments, and papers issued or used by officers of the United States Government.....exempt
Upon every confession of judgment or cognovit for $100 or over, except in cases where the tax for a writ has been paid.....50 cts

---

How to Repair the Silvering of Looking-Glasses.—The repairing of the silvering on the backs of looking-glasses has hitherto been considered a very difficult operation. A new and very simple method, however, has been described before the Polyteenic Society of Leipsic. It is as follows:—Clean the bare portion of the glass by rubbing it gently with fine cotton, taking care to remove any trace of dust and grease. If this cleaning be not done very carefully, defects will appear around the place repaired. With the point of your knife cut upon the back of another looking-glass around a portion of the silvering of the required form, but a little larger. Upon it place a small drop of mercury; a drop the size of a pin's head will be sufficient for a surface equal to the size of the nail. The mercury spreads immediately, penetrates the amalgam to where it was cut off with the knife, and the required piece may now be lifted and removed to the place to be repaired. This is the most difficult part of the operation. Then press lightly the renewed portion with cotton; it hardens almost immediately, and the glass presents the same appearance as a new one.

An Item for Housewives.—Cotton may be distinguished from linen in a cloth fabric by means of a microscope; the former fibres being flat, riband-like, and more or less contorted or shriveled, and the latter straight, round, and with cross knots at certain distances. These two fibrous matters may be also distinguished by the action, at a boiling heat, of a strong caustic lye, made by dissolving fused potash in its own weight of water. By digestion in this liquor, linen yarn becomes immediately yellow, while the cotton yarn remains white. The best way of operating is to immerse a square inch of the cloth to be tested, for a few minutes, in the above boiling hot caustic lye, to lift it out on a glass rod, press it dry between folds of blotting paper, and then to pull out a few of the warp and weft threads, when the linen ones will be found of a deep yellow tint but the cotton white or very pale yellow.—*National Intelligencer.*

What is Astrakan?—Many women the past winter have worn Astrakan without thinking what it is. Astrakan, as its name indicates, is an Asiatic invention. They couple a black ewe with a black ram. Before the dam has given birth to the young, she is killed and the lambs are taken from her womb. Their wool is jet black and of an extreme fineness. It costs very dear; there are Persians whose Astrakan bonnets are worth 500 francs ($100) a piece. This statement is worthy of notice by ladies who have false Astrakan—Astrakan the wool of which is long and dyed.—*Le Moniteur Illustre des Inventions.*

Cotton in India.—An old inhabitant of Berar informs the Bombay *Times* that such has been the influx of silver into the assigned districts of the Deccau, Hyderabad, and so greatly has the cotton crisis enriched the Combee cultivators, that one of them, in the performance of some vow, actually had a plowshare made of silver, plowed his field with it for some hours, and then broke it up and distributed the silver amongst five or six cultivators. The people were profoundly impressed by the event, and affirmed that such a thing was never heard of before, even in the Shastras.

Learning a Lesson.—A writer in the London *Star*, commenting upon Grant's campaign before Richmond, says, "all the military men of Europe may learn a lesson from what is in progress in those memorable fields in Virginia; just as our sailors have got very serious food for reflection in the sinking of the Alabama." From this, it would seem that our English cousins are disposed to learn a "lesson" from the defeat of the English pirate by the American cruiser. That the combat was in every respect an international one, is now well understood. It was an American built vessel against an English built vessel; American guns against English guns; and American sailors against English sailors.

Yankee Mechanical Skill and Perseverance.—The fighting qualities of Sherman's army are not the greatest of its efficient qualifications. Much of its success is due to the mechanical skill and ingenuity it possesses. A correspondent of the Cincinnati Inquirer, writing in sight of Atlanta, says that nothing surprises the rebels more than the rapidity with which all damages to the road, as they fall back, are repaired, and the shortness of time that intervenes till our trains are rattling on their rear:

"Yesterday, a prisoner remarked that they did not care for being driven back so much, 'but,' he said, 'to hear your d—d locomotives whistling the next day right on our heels, when we thought to delay you for weeks, surprises and vexes us.' The last rebel trains left Vining's Station, after they had just injured the road behind, on the 5th, at ten o'clock A. M. Yesterday, the 7th, our trains arrived at the same point, locomotives whistling most fiercely in the ears of the startled rebels, showing them that the damage had been repaired, and that our supplies and trains were again arriving at the front."

Superior Brick.—The Reese River *Reveille* says that a very superior material for making brick is found, in great abundance in Pleasant Valley, Summit District, near Austin. The brick made from it, is of a cream color, and when suspended and struck with a hard substance rings like a piece of steel. The *Reveille* further adds that it is only near Milwaukee, Wisconsin, that brick are burnt to such a color, the beauty of which has given to that city a peculiar and attractive feature. In Dana's Mineralogy, on the subject of bricks, those of Milwaukee are considered worthy of special notice. The reason he gives for their color is the want of oxide of iron in the clay. It seems that the clay of Pleasant Valley, of which there is an inexhaustible supply, is composed of the same material, which, together with the abundance and convenience of wood, will admit of the manufacture of brick to any desired extent, and of the best quality.

Accumulative Labor.—The best things and treasures of this world are not to be produced by each generation itself; but we are all intended, not to carve our work in snow that will melt, but each and all of us to be continually rolling a great white gathering snowball, higher and higher, larger and larger, along the Alps of human power. Thus the science of nations is to be accumulative from father to son; each learning a little more and a little more; each receiving all that was known and adding to its own gain, the history and the art of nations to be accumulative. Nearly every great and intellectual race of the world has produced at every period of its career, an art with some peculiar and precious character about it, wholly unattainable by any other race, and at any other time; and the intention of Providence concerning that art is evidently that it should all grow together into one mighty temple; the rough stones and the smooth all finding their places and raising day by day in richer and higher pinnacles to heaven.—*Ruskin.*

Double Flowers.—Nature never produces double flowers. They are considered among botanists as beautiful monsters. They are generally, indeed we may say always, the production of the skillful management of the cultivator. The Dutch gardeners have been very successful in this kind of production. The principle of doing it is to keep the plant growing rather stintedly on poor soil until the organs of flowering begin to show themselves, then pushing it by liberal watering with liquid manures. This operation is based on the physiological habits of plants. The first exertion of a plant is to get its growth, then it stops this part of the operation and makes flowers, after which the whole energy is bent on maturing and perfecting seed. This seems to be the great end and object of its life, and, this done, it ceases any further action, for the current season at least.

There is a curious fact said to exist a few miles south of Greencastle, in Putnam co., Indiana, where there is a family of six, all having the same birthday. The father and mother are each, 35 years old, the children respectively, 14, 11, 8, and 5 years old; their birthdays come on the 17th of May.

The insurance companies or their agents, in Virginia, (N. T.), becoming alarmed at what is supposed to be the number of incendiary fires occuring lately, have given notice that they intend to revoke all policies on wooden buildings.

A postman in the west of England has ridden the same pony for eighteen years, and he estimates that in this time man and horse have traveled 66,160 miles, which is much over twice the distance around the globe.

A bride's veil, worn recently at a Paris wedding, is said to have cost four thousand pounds.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributers as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:
Saturday Morning, August 13, '64.

FINANCIAL AFFAIRS.

The following is a statemcnt of the foreign commerce of New York for the fiscal year ending June 30th, which we derive from lato Eastern papers received by the overland mail:

	1861-62.	1862-63	1863-64
Imports Mdse.	$129,611,987.	$177,283,484.	$215,257,317.
Exps. Produce	133,706,060.	155,550,202.	165,095,576.
Expts. Specie	28,943,725.	52,018,240.	57,775,636.

The imports are $215,257,347 in gold, eqnal with gold at 160 premium, to about $350,000,000 in greeu backs, and the exports at the same rate, say 40 per cent. discount, are worth eomc $100,000,000 in gold, or $165,095,676 in Legal tenders, as officially stated. This statement shows that the imports of merchandise at tho port of New York, for the past year amount to about $115,000,000 in gold, or 115 per cent. more than the produce exports were. Thus verifying the axiom in fiuance, that an excess of government paper money causes imports to increase and exports to decrease, as an inevitable rcsult. The shipments of specie reach $57,775,636 seut in part payment of the $115,000,000 *apparently* due to foreign countries. The exports of specie from San Francisco to England and other foreign ports for tbe same period amount to $43,000,000, making an aggregate of $100,000,000 sent abroad from New York and thie city. At no former period in the history of tho conntry have the United States been so drained of the precious metals as during the past year.

The money market here, presents no new feature worthy of especial mention. Capital continues in excess of the demand for legitimate business purposes. The requirements of the mercantilo classes are light at this eeason of the year and uo pressure from that source is looked for. Unexceptional short time paper is wanted at 1½ per cent. a month nnd the littlc offering is quickly taken. The Supreme Court of this Statc will, it is said, early next week announce their opinion touching thc constitutionality of the Specifie Contract Law of California. The decision, we are informed, will be in favor of the validity of the act, but that etrenuous efforts bave been made by certain prominent polititious who have recently arrived from the East, to induce the Judges to change their views. The case to he decided was recently appealed from Judge Pratt's Court in this city.

The bankere report a light business in Eastern Exchange to-day. Currency Bills were sold at 135 and 140 per eent premium on gold. Telegraphic transfers, for some time past the most popular medium of remitanen East, are lower and were offered at 5½ per cent. premium.

The rceeipts of treasure from the interior and coaetwise ports, since last steamer day, amount to $1,800,000, one million of which came from Nevada Territory.

ANOTHER DIVIDENN.—The Consolidated Belcher, Baldwin and Abernethie Mining Companies have declared u dividend of $8 per ehare, or $25 per foot in the original Belcher stock, payable at their office in Virginia City.

THE COPPER INTEREST IN CALAVERAS.—The Napoleon Company have about 4000 tons of 3d class orc at the mine. By burniug a few tons in an ordinary kiln, they have been enabled to raise the per centage to 12 per cent. Preparations are now making for burning from 300 to 500 tons per month. From 150 to 200 tons per month of 1st and 2nd class orn are taken from the mine, in the process of siuking the shaft and in running the tunnel. The shaft is now sunk to the depth of 280 feet; at 290 a new gallery will be comoteneed. Work is also in progress to intersect the old shaft, which was abandoned on account of water, and which will be struck in a few days. It is expected that after the first of September from 700 to 800 tons per month, of Napoleon ore, will be shipped from this port.

The Calaveras company have struck their vein from four to five feet thick. The ore is very good, running to a high per centage, said to reach from tweuty to tweuty-five per cent. They are now shipping large quantities. The Table Mountain company are also shipping very largely. Vigorons work is also in progress at the Live Oak, near Telegraph City. From a letter reccived from the Superintendent on Tuesday we learn that the new shaft is down 60 feet with good indications. Excellent reports also continue to come in from the Union and Keystone, and other nines of lesser note, at and near Copperopolis. Thus it appears that the copper interest is constantly gaining ground in the estimation both of capitalists and the community geuerally.

MOUNT DIABLO MINES.—Mr. J. M. Casserly, Superintendent of the Kcokuk copper miue, at Mount Diablo, has placed upon our table several very fiue specimens of copper orn taken from thn Elmira, a newly discovered lodo, which has beeu opened only thirty days. Tho ore is a very good quality of sulphurets, intexmixed with black oxide of copper. It ie the best ore we have ever seen from Mount Diablo. Tbe Elmira is about three hundred feet below the Superior mine, in Clayton District. Both mincs are located within seven miles of a good coal minn, with a near and convenient intermedinte point, to which a good down grade may be obtained for both the coal and copper—a good locality for furnaces.

Mr. C. speaks very encouragingly of the copper mining interests generally of Mount Diablo. Tbe Keokuk is now working eight men, has a tunnel in 50 feet to the vein, from which an incline has been run on the vein upwards of 100 feet. Their first shipuent of ore is now on the way to this city. The Open Sesame has issued proposals for putting up machinery at the mine, and are now making preparations lor receiving thc eame, by elearing up the ground, making roads, etc.

COPPER NEAR VIRGINIA CITY.—The *Piute* of August 1st speaks of a bar of copper which the editor saw the day before, weighing 147 ounccs, with $3.08 gold and $2.28 silver in its compositiou—the bar being valued at about $20. This bar was smelted in a blacksmith shop from 57 pounds of ore, and is unprecedently rich. Thn owner of the bar did uot wish tbe locality of the ledge to be known at present, but says that a very large quantity of the "same sort" is in sight.

COPPER MINES IN TRINITY CENTER.—The Trinity *Journal* speaks encouragingly of the copper mining interest in Trinity county. Work is activcly progressing in the Copper Creek mine. Although the lead has not been reached yct, a considerable quantity of rich float ore has been taken out. The Company have completed a good road from Trinity Center to the mine—some eight miles Parties iuterested arc enthusiastic in the belief that they have got "a good thing." The assessments, so far, have beeu promptly paid, and the Company is free from debt.

Two or three miles east of the Copper Creek mine a ledge has been discovered and dubbed the "Rattlesnake." It was located by residents of Whiskytown, Shasta county, and the rock so far taken out is rich in copper. The mountain King" and one or two others are commanding much attention. Indications of copper may be found anywhere in the high bleak-lookiog range between the Trinity and Sacramento, and we shall not he surprised to hear that ledges as rich as any on the coast have been discovered before the end of the year.

A NEW STOCK FRAUD ATTEMPTED.

The detectives of Placer county have been engaged for several weeks in following up and ferreting ont one of the boldest and most infamous attempts at stock frauds, which has yet been attempted in this state. It appears that oue D. C. Williams, with several *aliases*, recently arrived at the Sportman's Hall telegraph station, beyond Placerville, passing himself off as a teamster, looking after certain teams which he had on the road. It appears, bowever, from snbsequent developments that he was in reality a skillful telegraph operator, and was there in connivance with parties in this city and Virginia for the purpose af obtainiug surreptitions telegraphic information which might be used by his principals in this city to operate with in miniug stocks. His first efforts appeared to be to loiter about the telegraphic instrnment and take down the messages as they passed. This he was enabled to do by sound, being an expert at the business. A number of messages were thus noted down by him, as appears from a letter found in his possession, by the officers, and directed to Messrs. Pease & Grim of this city. This letter appears to have been a first draft which was, or was inteuded to be subsequently eopied for mailing to its destination. It is but justice to Messrs. Pease & Grim to statc that they deny having any connection whatever, with Williams in this affair and assert that the letter referred to if sent, never reached them. Still it appears evident that he has been telegraphing and correspondiug with a uumber of parties in this city, who have undoubtdly been connected with him in this nefarions transaction. Subsequently or about the time he was taking these notes from the telegraph, hn made a bold attempt to briho the operator, a young mau about 18 years of age to whom he unfolded his plan of operation, offering him $300, down, and $1000, contingent upon his success. It was through the honesty of this young man that the villain was caught and exposed.

Tho main object of the plan was to secnre the earliest intelligence of tbo decision in a case in which the Potosi Mining Company was involved, and operate in this city on that information. It was arrangcd thut immediately after getting news of the decision, which was to be tclegraphed to him from Virginia, in cypher, that the wires should be cut to tbe east of the station, thns giving his confreres in this city ample time to operate to the extent of their inclination.

It would appear from thc intelligence communicated from Placerville by the correspondent of a morning paper, that letters and documents have been secured hy the officers, which fully set forth his plans, and implicate a nnmber of parties in this city. The writer alluded to says that the correspondence of Williams, while at the telegraph station was very extensive, the publication of wbich will in due time be made public and aside from the *expose* of high contracting parties, it will fairly "make Rome bowl." Ite publication at this time would he the means of overloading the steamer Golden City, hence for Panama to-day, and make the trip overland from Virginia City quite popular for a few days to come.

Williams was taken before Justice Bush, last Saturday, to answer to a charge of misdemeanor, and after an examination, was held to answer in the enm of $2,000. Being unable to procure bail, he was remanded to jail.

Mr. Gamble, euperintendent of thn Telegraph, has been most active in ferreting out this villainy, nnd it is mainly through detectives. put upon the track by him, that this scheme of rascality, without a parallel on this coast, has been thus nipped in the bud. It is to be hoped that tho most strenuous exertions will he used to bring to punishment and shame all parties connected with the affair. It is only by such etern and determined measnres, that the miuing community can be sifted of its villainy, and public confidence onee more restored to this important branch of business. Let the galled jades be made to wince.

THE first ox team crossing the plains this season arrived at Reesn River, August 4th.

ELECTION OF OFFICERS.

ARGENTORO MINING COMPANY.—Meeting, August 11th. Trustees, J. F. Schulthess, J. Britton, M. J. Newmark, J. H. Welch and John Reagan. President, J. F. Schulthess; Secretary and Treasurer. M J. Newmark; Superintendent, Fred A. Miller.

ADELAIDE CONSOLINATED SILVER M. CO.—Meeting, August 10th. Trustees, J. P. Bush, E. Livermore, C. W. Bush, L. B. Wooster, C. J. Ladd, L. Lazar and J. M. Miller. President, C. W. Bush; Secretary, Rodney Clark; Treasnrer, L. B. Wooster.

TORNADO GOLD & SILVER MINING COMPANY. Meeting, July 30th. Trustees, Elijah Livermore, A. L. Rhodes, H. P. Livermore, Joshua Barker and Charles Hamilton. President, E. Livermore; Secretary and Treasurer, Rodney Clark; Superintendent, C. Hamilton.

NOTE.—Secretaries are invited to send us reports of their elections, together with any facts or information which may be of general interest concerning their works.

AUSTIN, Reese River, bids fair to become, at an early day, a place of considerable importance. Her exports of treasure already exceed $50,000 per week. One year ago the building of a city at that point was considered almost a matter of impossibility from the apparent lack of building material. It was said that no clay could he found of which to make brick, while the lumber would have to be hauled 200 miles. Now the best brick clay in the world is found in its immediate vicinity in inexhaustible quantities, and there are several saw mills close by that make lumber out of the piñon, besides lumber yards that are supplied by mills a few miles distant, producing lumber in far greater quantities than it is needed. There is no further apprehension of any want of material for building the finest of structures, and slates in abundance for covering them.

THE LOCATION OF SOOKE, the new mining district recently discovered in British Columbia, is directly upon the shores of the Straits of Fuca, about ten miles from Race Rocks, or thirty from the Pacific Ocean. All vessels to Victoria or Puget Sound pass there—indeed Sooke is only about twenty-five miles from Victoria by water. Sooke possesses a splendid harbor—in fact, two harbors, one within the other, very much resembling an hour-glass, the upper harbor being thn larger, capable of containiug all the navies of the world; it is an immense inland basin.

The Sooke river is a small stream emptying into the north side of the outer harbor. It has many tributaries, small and large, one of which is named Leach River. The mouth of the river presents a curious appearance, being covered for a long distauce with immense quantities of rounded, water-worn boulders, among which the water finds its way almost without any distinct channel. About eight or ten miles up this river the good diggings commence, but how far they extend remains to be explored.

The diggings are very easily reached, as a steamer requires but two hours time to make the distance. A town site has been laid off at the entrance of Sooke river and trails from thence blazed out. The discovery of quartz mines has been reported, but not yet fully credited.

A FAMILY QUARTZ MILL.—Near the Devil's Gate is a little water mill, owned by a Mr. Lindsey, which is a very nice affair to have about the house. There is a water wheel, 32 feet in diameter, which drives two arastras, each eight feet in diameter. The expense of running is a mere trifle, being only the wear and tear of the water wheel and the occasional attention of one man—in fact, the wife of the proprietor runs the mill herself very frequently when her liege lord is about other business—and the concern grinds out about $8 per day, clear of expenses. Truly, this petite and simple mill is quite a snug little fortune to its owner.— *Virginia Enterprise.*

MUSIC is employed to lubricate our movements, as oil is used to lubricate the movements of machinery. We use music to dance by and to march by; we use it in hoisting, hauling and striking; we use it to lubricate our feelings, to express our joy and to sooth our sadness.

(From the San Francisco Weekly Stock Circular.)

MINING SHARE MARKET.

The Mining Shnre Murket exhibited a mnrked improvement this week, and a number of leading shures hnvo beca in better favor ut enhanced rates. Some speculativo stocks hnve also been more activn at better prices.

Recent devnlopements in prominont claims on the Comstock are regarded with much favor, and confidenco in tbeir permanency has been somowhat restored. If good pay ore csn bo fnnnd at the depth now attained it is thought that the continnity of tho Comstock lods in depth nnd width is well cstablished for somo time to come at least. The aggregate yield of bullion from Nevada Territury continnes lurge, aad the entire recsipt of treasurs from ths interior so far this month exceeds $2,000,000.

Gould & Curry has been in docided reqnest and was largely dealt in, opening at $1000, steadily advancing to $1600, receding to $1500, soller 60, rallying to $1550, then declining to $1300, and closing at $1375—52½ feet changing hands within this range. An impression has prevailed for soms tims past that material facts relative to tho actual condition of tbo mino were suppressed, whilo shareholders bave been debnrred the privilogo of personally examining the developments made in tbe several shafts snnk from tho lower level, they had been informed hy employees of ths Company tbat "littlo or no pay ore had been found, hut that probably enough was in sight to run tho mill for a month, and that it was hoped by crushing ores for other mines ths necessity for levying an ussessment might ho obvinted." Such damaging reports as these, it is well known, have bosn current here and elsewhere. for a long tims, and like rumors prejudicial to tho mine are still freely ventilated. We bavs the best anthority for stating that rich ores have hsen met with and are being extracted from tho sast, west, and north shafts, and that fair oro has been found in tbe south shaft, and tbat somo 60 tons nre daily taken from this portion of tho mins and sent to the mill exclusive of choice parcels rcserved for shipment to Europs. For several weeks past no ores have been taken from any other part of tho mine—the large body of good oro in the upper galleries (estimated at 8000 tons) not being disturbed. The recent additions und improvsmcats made to the Company's mill nrs a complete success, and the full capacity of this magnificent establishment of eighty stamps can at any moment be employed. Tbe tailings, carefully preserved in rosorvoirs at this mill from the rich ores worked heretofore, are now successfully treatsd, and soms $60 per ton ohtained from them. A number of tests hy the Patio process yielded less than $40, but other experimeats by tbe process now adopted were made and tbe result has thus far been satisfactory. These tailiags assay about $130 per toa and it is thought that they will yield at least $80 if properly treated at the mill. Tbe nmount on band is estimated at 16,000 tons which at tho present yield of $60 would be worth nearly one million dollars. They may also be worked again with profit.

Savags has been in hetter favor, advancing from $1000 to $1250 and $1300, receding to $1175, seller 30, and selling yesterday at $1150. This mine continues to improve, and at no former period were the prospects of tbe Company more flattering. From ths lower working level, n prospecting shaft has penetrated, thus far, a solid mass of ore to the depth of 70 feet, wbich shows no deterioration in any respect ns tbe shaft descends. It is believed tbat sufficient ore has been disclosed to employ tbe Company two years. 2,800 tons were extracted last moath, yielding a net profit of soms $80,000. 110 tons ars at present daily sent to differont mills, and the product for the current moatb will exceed 3,000 tons, in addition to which some first class ore will be set asido for a more careful treatment.

Potosi is in rather less request, and has fallen from $950 to $860, partially owiag to ths temporary injunction against the Company at the instance of the Bajazet. As soon as an argument can be heard it is thought that active operations will he resumed.

Ophir was moderately dealt in at fluctuating rates, declining from $500 to $425, rallying to $475, receding again to $450, then advancing to $525, and closing at $530 bid.

Challar was sold at $325 early in the week, hut rose on Thursday to $425, and was sold yesterday at $375. Advices from this mino continue favorahle, and activn measnres aro under way to connect the fourth and fifth levels. This will develop a body of ors 63 feet in depth and 180 feet in length.

Yellow Jacket is lower nnd wns offered yesterday at $450. An nssessment of $110 por foot was levind this week in lien of the former one of $30, which will more than cancel tho entire indebtedness nf the company. $250 per foot ($300,000) bas thus far been assessed and this wo believe is tho limit of their corporate powers.

Imperial opened nt $140, rose to $144, declined to $138, soller 30, and closed at about $132. A dividend of $6 per sharo was paid yesterday out of tho earnings of the past month, having somn $16,000 in the treasury of the company. Receipts of bullion from the mino are steadily increasing and a larger dividend is anticipated during the ensning month.

Lady Bryan has heen exceedingly sctive, nnd 1,300 shares changed hnnds, advancing from $3¼ to $5⅜, declining to $4½, and closing at $3½. Two tons of ore assaying $100 per ton, have heen sent to a mill in the Flowery District by way of an experiment.

Melones declined from $20 to $15, and then sold at $14. Wide West rose from $13 to $17, fell to $16, and sold yesterday at $13. El Dorado advanced from $1¾ to $3.

Nevada (J. G.) has heen sold nt $12½. Bullion at $30. Seneca at $10. Sheba at $35. North Potosi $42½. Golden Age & Empire, at $8.

North Americnn was sold at $25, hnt is now held at $35. Burning Moscow rose from $15 to $16½—105 shares changing hands. Legal Tender Notes have been dealt in at 38½ and 39, and were offered last evening at 39½.

The California Marble Company.

This Company hns heen organized for tho purpose of quarrying and developing ths native marhle of California, and bringing the same iuto market, for huilding, monumental, ornamental and other purposes. Ths chief ohject wbich the company has in view is to supply a geaeral want wbich bas existed bere for a length of time, in tbs article of marble, as well as to provide for futurc contingencies. Hitherto California has been dependent on Italy and Vermont for her supply of the material, which, at tbe best, oftentimes has been but precarious and nncertain, and as the demand multiplies, and the cost and difficulty of importation increases, persons are growing concious of tbe necessity of looking iu another direction to obtain an article so necessary and indispensnble. We need not look beyond the limits of our own State. Thc quarry of Indian Diggings, El Dorado county, contains marble to a vast and unlimited extent, and of qnantities which render it suitable for every purpose to which marble is applied.

The company's quarry has heen worked for tbe past few years to a limited extent, just snfficient to develop its resources. The surrounding country is heavily timbered, and a never failing stream of water flows through the ravine in which tbo quarry is situated. The numerous facilities at tbs command of the compauy, for quarrying and working the marble, and forwarding it to market, can scarcely be excelled. They have now in activo operation at the quarry, a mill for sawing the marble, consisting of a steam engine, hoiler and two gaags of saws. Thcy have also two additional saw gaags, which aro ia course of erection. When complete it is estimated tbey can turn out at least 6,000 feet per month, or about 45 tons of sawn marhle. The expcnscs of the mill for all charges per month, cannot exceed $500. The actual cost therefore of sawing marhls will hardly reach nine cents per foot; by adding to tbis tbe present cost of freight to San Francisco, $16 per ton, or twelve cents per foot, with an additional five cents for incidental expenses, and the total cost for quarrying, sawing, freight and landing at the company's depot, will amount to less than 26 cents per foot. This estimats is for sawn marhle. An equal qnantity of material in hlock, for ornamental nnd other purposes, could be produced and sent into market at less expense and proportionally large profit.

In addition to their saw mill at tbo qunrry the company own snd are about putting up at their depot in this city, an engine, boiler, and rubhing bed of twelvo feet in diameter, capable of rubhing 1,000 feet per day—the only machine of this kind now on this coast. This additional machinery will enable them to rnh and finish their marble for the market, as well as to mannfacture tilings and prepare ashlers work for tho fronts of houses. Tho last branch alone opens up a large field of operations, to tho extent of whicb it will he difficult to put n limit. From the facilities at their command the company can prepare and furnish fronts, at snch a reasonable figure ns to render it an object to builders nnd owners of real estate to select them even ss a matter of economy in preference to the imitation fronts at present in use.

As a legitimate hnsiness enterprise the California Marble Company offers every inducement for the investment of capital. Tho Marhle is of most excellent quality, nnd in respect to qnantity, nnlimited. It can be produced at very low rates, and must nlways command a ready sale at a very largs profit. Added to wbich is this great advantnge—the absence of serious competition. Ths present high tariff of $1.60 per foot on Italian marhle is prohibitory in its effect, while Vermont can hardly supply enough for Esstern consumption. Even with thoss drawbacks removed, the enterprise cannot fail of success in view of tbe daily increasing demand. The company bave already received orders from Victoria, Portlnnd, aad several of the interior towns, and it is reasonably anticipated that in a short time their hnsiness will extend throughout the entire Pacific Coast. It is their intention to keep a large stock always on hand, and this will in itself be certaiu to create a demand not existing at present. In every aspect that we view it, success seems certain; as asidc from the patriotic motive tbnt must actuate nll Californians iu the encouragement and development of native productions, the most urgent motives of prudence, economy and profit will operate in favor of tbe introduction and genoral use of ths native marbls of California.

El Dorado County Fair.—We acknowledge the recsption of a complimentary ticket to tbe El Dorado County Agricultural Fair, which is to commeuce at Coloma, on the 30tb inst., and continue four days. Ws notice in the schedulc of promiums tbo following list of implements, for each of which is offered, as n premium, a Diploma and a volnms of the "Scientific American:"—Best Quartz Crusher, (model); Best Quartz Amalgamator, (model); Best Tunneling Machine, (model); Best Mining Pump, (model); Best Rifls Box, (model); Best Sluice, (model); Best Mining Pick; Best Drilling Machine; Best Blasting Apparatus; Best Hydraulic Apparatus.

Ths "Scientific American" is a most excellent paper, and well worthy the patronago of hoth miners and mechanics; hut we would respectfully submit, whether the "Mining and and Scientific Press" is not a more suitahls premium for a California Society to offer for meritorious *mining improvements*. Wo prosums the matter never suggested itself to tho officers of the Society. We throw ont this hint merely *as* a suggestion.

California Marble.—Tbs proprietors of ths Marble Quarry at ths Indian Diggings, shipped last week, thirty sets of grave-stones to Portland, Oregon, in fulfillment of a contract. Tho stones were polished and lettered in tbe finest style. The sams cutters have contracts for over forty other sets. Tbe proprietors of tbis quarry, as will bs noticed elsewhere, filed articles of incorporation on Monday last.

New this Week.

Mosquito Quartz Mining Company, Mosquito Gulch, Calaveras County.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 10th day of May, 1864, an assessment of five dollars per sharo was levied upon the capital stock of said Company, and that at a meeting of the Board of Trustees of said company, held on the 9th day of August, 1864, it was ordered that said assessment should be payable on the 10th day of September, 1864, in United States Gold Coin, to the Secretary of said company, at the office of said Company, No. 433 Montgomery street, in the city and county of San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 10th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will ho sold on Monday, the 26th day of September, 1864, to pay the delinquent assessment, together with the costs of Advertising and expenses of the sale. By order of the Board of Trustees.

EM. FENARD, Secretary.

Office, No. 433 Montgomery street, in the city and county of San Francisco. 7 4t

Tellurium Gold and Silver Mining Company, Pine Grove District, Amador County, California.

Notice.—There are delinqaent, upon the following described Stock, on account of assessment No. 7, levied on the 13th day of July, 1864, the several amounts set opposite the names of the respectivo shareholders, as follows:

Names.	No. Certificats.	No. Shares.	Amount.

AT SAN FRANCISCO,

—AND—

Ladies' and Gentlemen's

Equestrienne Exhibition!

THIS GRAND EXHIBITION WILL be held at the BAY VIEW PARK, commencing September Second and continuing until the Eleventh, during which time the Mechanics' Fair will also ho in progress—the Great Pavilion of which will be open every evening—so that persons from a distance can attend both Fairs during their visit to the City. For particulars and Premium List see large posters and California Spirit of the Times.

7-td BEN. E. HARRIS, Secretary.

LEANDER RANSOM,

Civil Engineer and Surveyor,

Having been connected with the public works of tha State of Ohio for 20 years, and the public surveys of the State of California for 7 years. Also STATE LOCATING AGENT, and as such having the sale of

600,000 Acres of State School Lands,

At the low price of $1.25 per Acre. Terms; Twenty per cent in cash and the balance on a credit of several years.

7v9-tf Office, 328 Montgomery street.

MECHANICS' INSTITUTE.

INDUSTRIAL EXHIBITION, '64.

NOTICE TO EXHIBITORS,

THE EXECUTIVE COMMITTEE WILL BE PREPARED at the Pavilion, on Union Square, to receive Goods intended for Exhibition on the Twenty-Second of August, and none will be admitted after the 31st of August.

By order of the Committee.

O. B. PORTER.

N. B.—Newspapers publishing previous notices for the Fair will please discontinue them and insert the above instead. 7v9d

BOOKKEEPING.

YOUNG MEN CAN ACQUIRE A COMPLETE BUSINESS Education by taking a course of Bookkeeping and Commercial Calculations at the Counting rooms of Prof. Lury, 305 Montgomery Street. The course of study prescribed for his students is more extensivo and thorough than any other in the city. Penmanship taught on the Spencerian system. Charges reasonable. 7-2m

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the Mining and Scientific Press, from January 1st to July 1st, can be procured on application to the office.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

The Desert of Sahara.

The discoveries of recent African explorers have dispelled many of the popular notione concerning the great desert of Sahara. It used to be described as a nearly level sandy plain. This plain. it is now ascertained, does not exist, except at its eastern and western extremities. The central portions riee, in the form of terraces, to 900 or 1200 feet ahove the valleys of the Atlas and Soudan. They are interspersed with ravines and granite hills. Barth epeake of monntains 4,000 or 5,000 feet high. In geueral, however, the snrface of the desert is flat or slightly undnlating; in some places covered with a thick bed of sand, in others hard and flinty. Every aspect confirms the opinion of Humboldt, that the desert is the bed of a former sea, elevated hy geological convulsions. The traveller, almost at every etep, meets with monnds of fossil ehells and other debris of marine animals. There are immenso deposits of rock salt, in some places as pure as marble, and so compact as to serve in the construction of honses. Soudan derives salt from this sonrce. The effloreecence of nitre and saltpetre is almost everywhere apparent. Lions, tigere, and other ferocious animals with which the desert has in imagination been peopled, are met with only in the forests of the oases, where alone they can find food and water. The lion is the king of the desert only in poetry. Man is the true wild animal with whom the traveller dreads an encounter, and bandite infest every caravan route in the Sahara. The Sahara is not always destitnte of water. In passing hetween the tropics, the sun carries with him heavily laden nimhus clouds, which, without any monntains high enough to condense their moisture and canse it to fall at intervals, descend occasionally by their own gravity, and drop their watery treasures in gushing torrents, which fill every ravine. It is a deluge which lasts hut for a moment; the water disappears in the permeable eoil as fast as it came, and forms extensive sheets of water a ehort distance below the surface. This fact has heen revealed by numerous sonndings. Already excellent artesian wells, sunk by French engineere, havo created verdant oases in places where every vestige of vegetation appeared to be etcrnally buried heneath the sand. Bnt these hidden lakes, on which the desert partly reposes, are not a recent discovery. From time immemorial the Arabs have snnk in the opcn desert wells several hundred feet deep, till they met the watery bed, which they called the suhterranean sea.

HYDRAULIC WHEELS.—The Central Mining Company, at Deadwood, Sierra county, says the Mountain *Messenger* are abont having one of Fredenhurr's hydraulic wheels pnt np on their claim. The Union Company, at Howland Flat, contemplate doing the same thing for hoisting their dirt, it heing much cheaper at first cost and the expense of rnuning it being only a trifle, compared with ranniug the engine. Other mining companies who want power and can get a small force of water should consnlt Fredenburr at Howland Flat concerning his whecl, which is cheap, durable and practicable.

DANGEROUS PLAYTHINGS.—A short time since a hoy in Worcester, Mass., held one of the little red halloons, which are now so popnlar among juveniles, over a fire to dry, it having got wet in a shower. It very soon exploded, accompanied by a loud report. The father of the lad was prostrated to the floor and stnnned. These balloons are filled with carburetted hydrogen, and should nevcr be carried near the fire. Tbis gas is scarcely less safe ahont a fire than gnnpowder.

SEIZURE OF ARMS.—Tho Schooner Matilda was seized at Half Moon Bay on Friday night last, while endeavoring to leave tho harhor with abont 4000 etand of arms on hoard, in contravention of law.

THE Mendocino *Herald* saye that tho streams in that vicinity, on whicb the mills are built, are eo low that the mills have either stopped or rnn but a few houre per day. The consequonco is, that, with barns and granaries full of grain, pcople thcro are likely to become short of bread, or bring it from abroad.

SOAP FROM COAL OIL.—Tho Oil City *Register*, of Penneylvania, has seen a good article of soap manufactured from coal oil. It is claimod that soap manufacturod from this oil will remove all kinde of stains and dirt. and do more work than any other, and in less time.

Mr. A. J. Godfrey, aged fifty, a native of Maine, was killed at Condemned Bar, in Yuba county, on the first instant, bythe caving of a tunnel in which he was at work.

Office of the Company No. 325 Montgomery street. 1tf

THE ALABAMA BEAT AGAIN.—The Alabama not being satisfied with the recent defeat by Capt. Winslow of the Kearsage, says the Reese River *Reveille*, concluded to take a dry-land fight in the land of silver bricks. There are two silver mines here bearing the names of the above vessels. The Kearsage had ninety-seven pounds of rock crushed, which yielded forty-seven ounces of crude bullion, while the Alabama had one-fourth of a ton worked, which only yielded sixty-three ounces, so the famous Alabama was agnia beaten. Both are excellent mines, and if properly managed and developed will pay largely.

LEMONADE FOR THE SICK.—Two teaspoonfuls of arrow-root or corn starch, in a quart pitcher, wet with a little cold water; add three table-spoonfuls of white sugar, the juice of half a lemon, and a small piece of the rind. Stir all quickly, while you pour boiling water till the pitcher is full. When cold, this drink is more nourishing and less apt to be injurious than lemonade made in the ordinary way. Try it.

MINING DECISION.—Judge Sawyer, in the case of Agard vs Noapareil Mining Company, has decided that the verbal assurance of the Company's President that the stock was unassessable was a sufficient guarantee, and granted an injunction against the sale of such stock for delinquent assessment.

SEMME'S corsair, which lies at the bottom of the English channel, rejoices in a most significant name—the A-la-ba-ma—which, translated from the original Tuscaloosameaas "Hero we rest."

FLUME BURNED.—Twelve hundred feet of the flume belonging to the Spanish Ranch Water Ditch, Plumas county, was burned a few days since, caused by a lot of Chinamen starting a fire in the woods, and leaving without extinguishing it.

A London compositor has lost his life by touching a boil on his face with his fingers, they being covered with the dust from new type. The boil swelled to an enormous size, and the young man died in about ten days.

THE Visalia *Delta* learns that immense damage is being done by fires, on the line of the new Owen's River Trail. These fires, result from the sheer carelessness, or worse, of the hog men.

THE costume of the Spanish ladies has not changed for two hundred years. Sensible—very.

REPRESENTATIVE Cole remains in the East until the close of the next Session of Congress.

WHY they are called "Strawberries" is thus explained. This ruddy and delicious fruit, was picked a long time ago in England, by children, and strung upon straws or grass and sold at the rate of so many strings for a penny. Hence the name.

THE latest prodigy among the Paris savans is a hen which astounded her owner by laying, not her accustomed egg, but a membranous pouch, enclosing a little dog, perfectly formed—but dead.

THE Virginia City *Herald* remarks that in that city, because of the great altitude, water boils at 200 degrees Fahrenheit. Two hundred and twelve is the boiling point on the lowlands.

ADMIRAL SIMPSON, of the Chilian navy, has gone to New York with power and funds to contract for the construction of several monitors for his Government.

PRECOCIOUS.—A boy only nine years old is now in the Nevada jail on charge of horse stealing. He was caught in the act, and exhibits all the hardiness of an old hand at the business. He was arrested in Grass Valley, where his parents reside. He has for some time been considered a very bad boy, naturally of thievish propensities.

W. T. GARRATT,
City

HYDRAULIC PIPES AND NOZZELS
For Mining purposes, Iron Steam Pipe furnished with Fittings, &c. Coupling Joints of all sizes. Particular attention paid to Distillery Work. Manufacturer of "Garratt's Patent Improved Journal Metal."
☞ Highest Market price paid for OLD BELLS, COPPER AND BRASS. ☜ 6tf

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of the ores worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked separately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled— "For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them are such as to merit interest, or are to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

19-tf

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

NEW VOLUME.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "SLIGHT COLD" in its first stage; that which at the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. *"Brown's Bronchial Troches"* give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in pocket and taken as occasion requires.* Agents for California 1-1m REDINGTON & Co., San Francisco.

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.

14t W. A. H. TOWN, Secretary.

Caution.—Libertad Gold and Silver Mining Company, District of Ures, Sonora, Mexico.

The following certificates were sold for delinquent assessments on Saturday, July 16, 1864, and will not be transferred on the books of the company:

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Pacific Powder Mill Company, Marin Co., California.

NOTICE.—A special meeting of the Stockholders of the above Company, will be held at the Office, No. 708 Montgomery Street, San Francisco, on Saturday, the 20th day of August, 1864, at 7 P. M., for the purpose of amending the By-Laws. By order of the Trustees.

4-4t A. H. MEYERPETER, Secretary.

READY ROOFING

READY TO NAIL DOWN.

READY ROOFING
At less than half the cost of tin roofs.

READY ROOFING
More durable than Tin.

READY ROOFING
Suitable for steep or flat roofs.

READY ROOFING
For all kinds of buildings, in all climates.

READY ROOFING
Easily, cheaply, and quickly put on. Needs no coating over with cement after it is nailed down.

READY ROOFING
Made of a strong woven fabric, thoroughly saturated and covered upon both surfaces with a perfectly water-proof composition, and put up in rolls ready for use—40 inches wide, and 75 feet long.

WE ALSO MANUFACTURE
Liquid Cement,
FOR LEAKY TIN ROOFS.
Much cheaper and more durable than oil paint. Also,

Compound Cement,
For Leaky Shingle Roofs,
Which will often save the cost of a new roof.

Samples of Ready Roofing and Circulars sent by mail when desired. Favorable terms made with responsible parties who buy to sell again.

6-tf 73 Maiden Lane, N. Y.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJUSTING WRINGER. No wood-work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $0.50. No. 1, $7.50. No. F. $8.50. No. A. $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,

No 13 Platt Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the best Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST PUTNAM'S WRINGER. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co:—

GENTLEMEN. I know from practical experience that Iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use. Respectfully yours,

JNO. W. WHEELER. Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.

New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.

6-tf

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press

COMMENCES
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

DEWEY & CO., Publishers.

O. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

NEW YORK AND PHILADELPHIA
ORNAMENTAL IRON WORKS.

THE SUBSCRIBERS HAVING FORMED A CONNECTION with Messrs. Woon & PEAOT, of Philadelphia, under the above title, are prepared to furnish every description of

ORNAMENTAL IRON WORK,

Cast, Wrought and Wire Railings, for enclosing

CEMETERY LOTS, DWELLINGS, PUBLIC SQUARES, &c

Verandahs, Circular & Straight Stairs, Doors, Window Guards, Stable Fixtures, Fountains, Vases, &c.,

Also, having purchased of the late firm of Hutchinson & Wickersham, Canal street, their entire stock of

BEDSTEADS, CRADLES, FURNITURE, &c.,

They now offer to the public, at their New Warehouse, the most extensive stock of Ornamental Iron Goods to be found in the United States. They have also purchased of the NEW YORK WIRE RAILING CO., the patent right and machinery for making

Wire Railing, Farm Fence, Window Guards,

GRATING, COAL SCREENS, &c.,

And will continue the *Exclusive Manufacture* of the same at their Works.

CHASE & CO.,
(Opposite St. Nicholas Hotel,) 524 Broadway, New York.

Orders may be sent through the AMERICAN ADVERTISING AGENCY, 389 Broadway, New York. 6

ENLARGEMENT.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduced important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinions and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be able to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensue. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in references, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent secured by combined efforts. For this reason we only charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted, the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instalment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloths, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	16
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C..	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the vender, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

THE MINING AND SCIENTIFIC PRESS is published every Saturday morning. Each number contains SIXTEEN PAGES of SIXTY-FOUR COLUMNS, issued by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very fair

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheapor than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

San Francisco, June 23, 1864. 1-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process, that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, are less liable to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

Lloyd's New Amalgamator

Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arrastra. From 60 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15¾ ozs., Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 75

The assay being made by Messrs. Mollier & Co.

From 2½ pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Hewston & Co.

The value from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $ 5 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $33 54.2 per ton; and over the works at this mill, $62 54.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $9.19, Silver, $1.82, amounting to $2.71-100—equal to $361.33-100 to the ton—the assay being made by Messrs. Mollier & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Grand Lode, San Francisco District, Arizona Territory, worked for C. W. C. Rewell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2.6.13-100. Assay made by Messrs. Mollior & Co. 100 pounds of the same ore, worked by Deetken's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.58-.00—equal to $111.60 to the ton. Difference in favor of Lloyd being $114.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kinsell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

ENLARGEMENT.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

By order of the Board of Trustees.

T. A. MUDCE, Secretary.

Office, 523 Clay street, San Francisco, August 6, 1864. 5

Wellington Gold and Silver Mining Company, Wellington Ledge No. 2, Santa Catalina Island.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 16th day of July, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable on the 15th day of July, 1864, in United States gold coin, to the Secretary, at his office, No. 605 Sacramento street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Wednesday, the 17th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay said delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. O. GARDNER, Secretary,

Office, 605, Sacramento Street, San Francisco.

POSTPONEMENT.—The advertisement of delinquent stock on the above assessment, is postponed until August 20th, 1864, and the sale thereof is postponed until September 3d, 1864. By order of the Board of Trustees.

3-5t S. O. GARDNER, Secretary.

Well Partridge Mining Company, Weaver District, Weaver's Placer Diggings, Arizona Territory.

Notice.—There are delinquent, upon the following described stock (of said company), on account of assessment No. 1, levied on the 5th day of January, and assessment No. 2, levied on the 8th day of February, 1864, the several amounts set opposite the names of the respective shareholders as follows, viz:

And in accordance with law, and an order of the Board of Trustees, made on the 25th day of June, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on the 22d day of August, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

R. K. ALLEN, Secretary.

Office, No. 16 Metropolitan Block. 6-3t

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the nnqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for pateuts, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It lt e sterling periodical, and deserves encouragement.—*Territorial Enterprise.*

New This Week.

Animas Silver Mining Company, Ventanas, District of San Dimas, State of Durango, Mexico.

And in accordance with law, and an order of the Board of Trustees, made on the 14th day of July, 1864, so many Shares of each parcel of said stock as may be necessary, will be sold at the office of the company, No. 521 Clay street, San Francisco, on the 27th day of August, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

M. G. ELMORE, Secretary.

Office, 521 Clay Street, San Francisco. 7

La Traviata Gold and Silver Mining Company, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 12th day of, July, 1864, an assessment of 50 cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. AUG. KUNAST, Secretary.

Office, 540 Washington street, San Francisco. 3-4t

POSTPONEMENT.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, August 20th, 1864, and the sale thereof is postponed until Saturday, September 3d, 1864. By order of the Board of Trustees. AUG. KUNAST, Secretary.

Office, 540 Washington street, San Francisco. 7-1

Gold Rock Gold and Silver Mining Company, Murphy's Camp, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 30th day of May, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company; and that at a meeting of the Board of Trustees of said company, held on the 9th day of August, 1864, it was ordered that said assessment should be payable on the 10th day of September, 1864, in United States gold coin, to the Secretary of said company, at the office of said company, No. 433 Montgomery street, in the city and county of San Francisco.

Any Stock upon which said assessment shall remain unpaid on Saturday, the 10th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 26th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees

EM. FENARD, Secretary.

Office, No. 433 Montgomery street, in the city and county of San Francisco, 7-4t

Oxford Beta Tunnel and Mining Company, Silver Hill, Esmeraldn District, N. T.

NOTICE.—There are delinquent upon the following described stock, on account of Assessment levied on the 11th day of July, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
D D Everts	158	10	$5 00
Sidney Lemon	160	15	7 50
H Montfort,	152	5	2 50

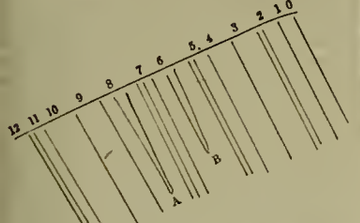
THE MATHEMATICS OF MINING.

NUMBER II.

BY O. W. EASTON.

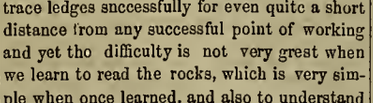
We will introduce at this point an approximate plan of the rocks on the western flank of the Sierra Nevada, in something of their consecutive order, as alluded to in a former number, and which will be still further elucidated in this; for in this fact of the consecutive order of the rocks upon the earth's surface, and their differing character and relations, as is shown by the annexed diagram, lies the apprehension of the science of geognosy, as applied to mining.



The above diagram is intended to represent a section of the western flank of the Sierra Nevada, from the summit toward the valley, exhibiting the consecutive order in which the rocks occur.

0, represents granite, at the summit of the Sierra Nevada mountains; 1, micacious rock—primitive; 2, marble 1500 feet wide; 3, granite from three to five miles wide; 4, talcose slate; 5, marble with copper on its west wall; 6, talcose slate; 7, talcose trap, with gold quartz on its west wall; 8, talcose slate; 9, greenstone trap—a true trap; 10, primitive rock, a species of granite; 11, marble, with copper, on its westerly side; 12 talcose slate. In this way the rocks are arranged all along the mountain side, continuing through various changes to the valley, and if fully portrayed on this plat would reach the gold belt at Clarksville, and still further west, the copper belt of Amador. A and B are fissure veins of gold bearing quartz in the country rock of talcose slate.

In my former number we examined the traps somewhat. We will continue. The belt of gold bearing trap of El Dorado county is a narrow belt of massive talcose trap. Its course N. N. W. and S. S. E. How far it continues I cannot tell, but it is probably very extensive in length. The amount of surface exploration which can be achieved by one pair of eyes and legs sustained by a comparatively "Shakspearean" purse, is limited. This subject is one more fitting a State survey, with a corps of observers in the field. It would be a grand help to mining if we had a geological map of the State, extending along the flank of the Sierra Nevada, with the space ruled into meridians, parallel with the axis of the mountains, say of five or ten miles apart, from the summit to the sea, and also ruled at right angles, checkerboard like, and the rocks across the various intersections of the meridians marked on the map, commencing at the summit with granite and gneiss, and on a direct line to the valley all the geological changes noted. The lines should also show the towns and mining camps through which they passed. Thus, for example, if ten miles south of Georgetown, in El Dorado county, on the Placerville line of exploration, we found the order of rocks we have already partially described, the miner would be able by running out the lines, both northerly and southerly, to find a ready clue to the same rocks, at miles distance from any given point. If then the mineral line passed through Georgetown, and so northward, and if at that point there was to be found the same consecutive order of rocks, then, by apprehending the question of topography, it would be an easy matter to find the same ledge of metal bearing quartz. But if there were a change in the rocks, if the belt of trap which is the key note of the system was missing, it would be a useless expenditure of time and labor to look for the continuation, at that point, of a rich mine, which might be known to exist in a parallel direction miles away. Hence it would be absurd to look in Plumas county or Del Norte for the continuation of the identical copper mines of Calaveras county at Copperopolis, for in the space between we have El Dorado and Placer counties in which the copper is found associated constantly with a marble hanging wall and granite or black talcose slate foot wall; whereas the Copperopolis mines have an amorphous greenstone, talcose trap for their hanging wall, and serpentine, primitive, for a foot wall; so the Newton mine, in Amador, lying between the two counties, El Dorado and Calaveras, in Amador, has a talcose, amorphous greenstone trap for a hanging, and black talcose slate for a foot wall, thus showing that there are many changes in the character of the rocks of the earth's surface in comparatively short distances, unless the traps are not persistent, as is seen in the geology of the section described, and as the metals are directly connected or related with them, as is very evident, then if they change, are not to be found or are different in character and associated with other primitive rocks, it will therefore be impossible to find the belt of metal beyond its own associated rocks. We all know how extremely difficult it is to trace ledges successfully for even quite a short distance from any successful point of working and yet the difficulty is not very great when we learn to read the rocks, which is very simple when once learned, and also to understand topography.



The upper line in the above diagram represents the topography, or surface of the country on the line of the ledge. The lower line represents the actual outline of the quartz in the ground. By this is shown where the ledge is to be found near the surface, and also that it lies deep in the depressions between outcrops.

Let us examine this question of topography somewhat as shown in Fig. 2. It is well known to most miners that the highest point of a hill, which lies on the course of a ledge, is the place at which the ledge will be found nearest the surface, and that exploration should not be conducted in the depressions on the line of the ledge. This simple, uniformly persistent fact is one of the strongest proofs of the volcanic origin of quartz ledges, as it is very evident that "the upthrow of the ledge makes the hills." Another persistent peculiarity is that the ledge will be found at or near the surface, once in about every 1,500 feet for a continued space, and moreover there will be a set of parallel veins which will lie at a quite uniform distance apart from the main vein as in the belt of Amador gold mines and also in the El Dorado gold mines, which crop out alternately; that is the out crop of the spur veins will be in line of the place of greatest depression of the true ledge. See Fig. 3.

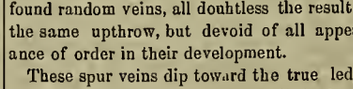


Fig. 3 represents a bird's eye view of the gold bearing ledges of Amador and El Dorado counties. The upper line is the true ledge, A, B, C and D being the outcrop of the chimneys. The lower line is the fissure vein, only 80 feet distant on the west. The chimneys A, B, C and D alternate with those of the true ledge. This same system will be found to apply to the gold mines of El Dorado county. On the east of the upper line are also to be found random veins, all doubtless the result of the same upthrow, but devoid of all appearance of order in their development.

These spur veins dip toward the true ledge from which they came, and yet it is by no means certain that they really join that ledge, but at the bottom are rather scattered, and split up and lost among the slates. If a ledge of gold, silver or copper lies in the same character of rock on both its sides, it is evidence that it is a fissure or spur vein, and is not to be depended on to yield continuously. It will not answer to run tunnels at a great depth in the hope of striking the lodge for the chances are that the ledges do not extend to any great depth downward, but are superficial. Still such ledges oftentimes pay better than the true ledge, for a while, and then suddenly fail, being lenticular in their character, running out in length and depth. Amador county is one of the finest gold mining counties in the State, yet because of this system which obtains there, and the difficulty of finding the true ledge, which is so precarious, mining there has resulted in very many disastrous failures, and a few brilliant successes.

In copper mining the same principle will be found to hold true. The outcrop of copper is iron in slate, usually, when it is in a talcose slate district, and is called by the Germans the "Iron-hat." Excepting with peacock ore which lies in quartz and has no iron outcrop, the other sulphuret copper ores have an oxyd of iron outcrop, called "gossan," and when found in primitive rocks on both sides, will be the outcrop, of copper in limited quantities and not a true vein, but when associated with a trap rock hanging wall, the ledge will be found permanent and the copper will be reached when a shaft is sunk *in* the gossan, near the hanging wall, in about 50 feet.

This opinion is entertained that the Copperopolis belt of copper is very wide, 40 miles or more, extending north and south the whole length of the State. Some of the facts pertaining to copper mining, as already given, seem to conflict with this theory. I can only say that all theories and speculations must recognize and be based upon existing facts. One fact is very patent to any one who has visited and studied Copperopolis mining, and that is, that prospectors for the great copper ledge supposed to exist to the north of the Keystone mine have thus far—I think I am not mistaken—failed to find it, and for miles north, on the supposed range, the surface of the country is full of unsuccessful prospecting holes, and in two cases steam works are in operation, and I think unsuccessfully, as they doubtless are too far east—are on the east side of the green-stone trap hanging wall, and hence they cannot find it, of course, because nature has placed it elsewhere. Such is the correct literal statement of fact with regard to the search for the northerly continuation of the Newton mine. As yet they have not found it; and the very first shaft sunk on the northerly location was 150 feet or more too far east, and hundreds of feet too far south, simply because in the former they did not recognize the trap hanging wall and in the latter they did not apprehend topography, or in other words the outline of the surface as the effect of the upthrow of the ledge. In my next I will describe somewhat the silver mines of Washoe.

VIEW OF THE PAVILION.—The view of the Mechanics' Pavilion, the structure in which the approaching Fair is to be held, is in the hands of the artist, and in a forward state of completion. It will be ready for delivery by the last of the coming week, and will constitute one of the finest specimens of the lithographic art which has ever been produced in this city. It is being drawn on stone by Mr. Geo. H. Baker, and will be published by the proprietors of the MINING AND SCIENTIFIC PRESS.

AGRICULTURE IN REESE RIVER.—Reese River bids fair to become quite productive in agriculture. There is no reason why such should not be the fact. The climate is very similar to that at Salt Lake, where agriculture is on a par with almost any portion of the globe. Quite a number of gardens have been cultivated with good success the past season in the vicinity of Austin. We notice from the *Reveille* that green corn has recently been selling freely in the streets of Austin. There need be no lack of garden vegetables where corn can be raised.

ARCHITECTURAL.—The Ellemada Tunnel Co., at Reese River, is of an architectural turn of mind, and so names its ledges Tuscan, Ionic, Doric, etc.

BOGUS GOLD DUST.—It is said that scarcely a parcel of Boise gold dust reaches the Dalles, that is not "doctored." The dealers in the article have immense trouble with the swindlers.

GUN COTTON IN MINING.

Gun cotton as a substitute for gunpowder occupied the attention of the scientific world for some time after its discovery. The early experimentors found such a want of uniformity in its character and so much danger in its use that most of them abandoned the attempt. For fifteen years past, however, Baron Von Leuk has been experimenting in Austria, both in its manufacture and also—at first on his own account and afterwards on a larger scale by government aid. From the lengthy report upon Austrian gun cotton, of Mr. J. Scott Russel, to the British Association of 1863, we gather the following facts. "The great waste of force in gunpowder constitutes an important difference between it and gun cotton in which there is *no* waste. The waste in gunpowder is sixty eight per cent. of its own weight; and only thirty-two per cent. is useful." The waste is expelled from a gun unconsumed. "Bat gun cotton can be exploded in any quantity, instantaneously. This was once considered its great fault. Baron Von Leuk has discovered the means of giving gun cotton any velocity of explosion that is required by merely the mechanical arrangements under which it is used. In his hands it has any speed of explosion, from one foot per second, to one foot in one one-thousandth of a second, or instantaneously. The instantaneous explosion is made use of when it is required to produce destructive effects on the surrounding material.

The form used for blasting, is gun cotton thread spun into ropes up to two inches in diameter, and hollow in the center. It combines great density in the speedy explosion. As regards mining uses, the fact that the action of gun cotton is violent and rapid, in exact proportion to the resistance it encounters, tells the story of its far higher efficacy in mining than gunpowder. The stronger the rock the less gun cotton, comparatively with gun powder, is necessary for the effect; so much so that while gun cotton is stronger than gunpowder as three to one in artillery, it is stronger in the proportion of 6.274 to one in a strong solid rock, weight for weight." (Later authorities say more than eight to one compared with gunpowder.) "Its power of splitting up the material is regulated exactly as wished"—by causing the same amount of gun cotton to occupy a larger or smaller amount of space.

To blow up the gates of a city, a very few pounds of gun cotton, carried in the hands of a single man will be sufficient; only he must know its nature. In a bag it is harmless—exploded in a box it will shatter the gate to atoms. Against the palisades of a fortification a small box containing twenty-five pounds merely flung down close to it will open a passage for troops. In actual experience, on palisades, a foot in diameter and eight feet high, piled in the ground, backed by a second row of eight inches in diameter, a box of twenty-five pounds cut a clear opening nine feet wide. To this three times the weight of gunpowder produced no effect whatever except to blacken the piles. Against bridges: a strong bridge of oak, twenty-four feet span, was shattered to atoms by a box of twenty-five pounds, laid on its center. The bridge was not broken; it was shivered. As to its effects under water: in the case of two tiers of piles, in water thirteen feet deep, ten inches apart, with stones between them, a barrel of one hundred pounds of gun cotton, placed three feet from the face and eight feet under water, made a clean sweep through a radius of fifteen feet, and raised the water two hundred feet! In Venice a barrel of four hundred pounds placed near a sloop in ten feet water, at eightsen feet distance, threw it, in atoms, to a hight of four hundred feet. All the experiments made by the Austrian Artillery Committee were conducted on a grand scale, as were also the trials for blasting and mining purposes made by the Imperial Engineers' Committee."

If by the substitution of gun cotton for gunpowder in blasting in our mines, drill holes one-third the size or one-third the number now used will do the same work, its introduction would assuredly be one of the greatest improvements in mining. That it will do this its advocates assert. Of the objections to and advantages of its manufacture and use we shall speak in our next issue quoting from the report of another member of the same committee.

That "Masonic Baptism."

Some three months since, a morning paper announced a "Masonic Baptism" as having taken place the evening previous in one of the Masonic lodges of this city. Several papers enquired what a "Masonic Baptism" was, and among others the *Evangel*, the Baptist paper of this city, made very particular enquiry. No paper on this Coast thought it worth while to notice the query, or perhaps none was able to answer; but a writer on the Atlantic side, noticing the item which was copied into the Eastern papers, sent to the *N. Y. Chronicle* the following communication, which gives in full the information desired:—

To the Editor of the *Chronicle*:—In your issue of the 9th inst., there appeared an article from a California paper, giving an account of a *masonic baptism*, which you very properly characterized as extraordinary, and requiring explanation.

Will you allow me space to say that the word "baptism" is not used in its literal sense as describing a religious ceremony, but in the figurative one, as when we say of a regiment, that it has been *baptized* in fire, or "Revolutions are the *baptism* of tears and blood." The ceremony has not the slightest resemblance to that used by various denominations of Christians, by immersion or sprinkling, no water being used, but is simply the formal adoption of the son of a mason by the Lodge to which the father belongs. The word baptism has been a most unfortunate selection, because in its general acceptation it wounds the susceptibilities of a large portion of the Christian world, and it would have been better for all concerned if the proper word—adoption—had been put in its place. The ceremony, like many other foolish things, originated in France, and has no more connection with free masonry than the late Bishop Hughes had with the church to which you belong. It can never take root in this country, for we look upon masonry as too serious to be made the plaything of children, even those of larger growth, and our inculcations expressly forbid even the discussion of topics calculated to interfere with the religious convictions of any one.

Fraternally,
JOHN. W. SIMONS,
Past Grand Master.

LO, THE POOR EDITOR!—It is said that the tables of mortality show that the lives of editors are comparatively short. The exacting toil which the editor pursues, rarely broken by seasons of relaxations, shatters his nerves and exhausts his vital energies. When other men sleep, he is at work in close room, surrounded by the stifling odors of damp newspapers, and his constitution must be adamant if he does not break down before he sees fifty years. Nothing but great success, and ability to lighten his toil by employing assistants will save him from this irresistible doom. True, there are occasional exceptions in some newspapers, whose editors consult their own ease more than they do the wants of their readers, but no editor who possesses the ambition to be up with the times can expect to live out the full measure of his days. And yet, notwithstanding the labor, the toil, the anxiety of the editor, and his constant efforts to please, his patrons often find fault with him for some unlucky word, or for expressing his honest opinions upon some subject which does not meet the taste of petulent readers. Such is human nature. So many and so various are the characteristics of men with whom he is thrown in contact, that no editor can escape being the subject of fault-finding. He learns to expect it, and takes it philosophically when it comes, although some men seem to imagine that he can easily be annihilated by the breath of their nostrils—by the mere expression of their dissent to his independence, and the words, "stop my paper." But they find him taking the matter with the utmost indifference, as nothing but the most ordinary transaction in the world, and keeping on his course the same as before. Irate patrons would not be astonished at this, if they know how "used to it" the editor has become.

NEW SILVER DISTRICT.—A correspondent of the San Andreas *Register* says some citizens of Murphys have lately discovered silver mines of great promise on the head of the west fork of Walker's river, directly south of Silver King district, some twenty or thirty miles from Silver Mountain.

Practical Instruction.

In that most admirable report of Agassiz in relation to the museum of comparative zoology, the great naturalist gives an interesting sketch of his method of training young men to the pursuit of natural history. He puts them at work among the specimens themselves, studying facts, tracing analogies, developing differences and mastering principles; for says he, "I have satisfied myself long ago that the general and most elementary principles of one science are better understood when illustrated from nature than when explained in a mere abstract manner. To me there is a world of wisdom in that remark.

The divorce between text book instruction and particular knowledge is one of the great curses of American education. We know accomplished divines who cannot tell the differences between a chestnut and an oak. We have seen more than one excellent Greek scholar who was incapable of distinguishing between a field of growing wheat and one of rye. A large portion of our college graduates are ready to confound iron pyrites with specimens of gold ore; and we have known numbers who have made capital recitation in chemistry during their collegiate course, who never really learned, are now in entire practical ignorance of the appearance, characteristics, and uses of the simplest chemicals. We have seen more than one young man who, after twelve years' good schooling, and under accomplished teachers at that, could not draw an ordinary note of hand or calculate a simple sum at interest.

It is this ignorance of every day things which makes our scholars the sport of your rough business men. They get plundered in the market and cheated in the store. They are taken advantage of by their grocer, and imposed upon by their butcher. Conscious of their ignorance of what many a wide-a-wake eight year old is familiar with, they shrink from coming in contact with men in business ways, and go through life one-sided. We do not believe it would hurt a statesman to know how to sew on a button or handle a hammer. We are sure that no divine will be worse for being familiar with the secrets of the kitchen and the pantry; and we are quite certain it does not hart an editor to be a judge of flour or of good beef. Ours is a practical people, and we need a more thorough every-day education of our young men and young women. The highest society is the most thoroughly self-helping. It is compatible with the highest culture to be able to wait on one's self. For ourselves, we would as soon be handed over to the executioner as be dogged by a valet. But in order to free men from imposition and fit them for every-day duties they must be trained to them in their youth. A child will learn by observation and by touch a thousand things in his early years without effort, which it would take weeks of hard labor to secure at a later period. We coop our children too much in school-rooms. They waste too many precious hours over tasks that, dwadling over them as they do, do the mind more harm than good. They should be surrounded more with objects and less by text-books; taught sizes, forms, qualities, colors, actual contact rather than hard labor to acquire abstract descriptions. We hope some day too see a radical reform in the methods of teaching, and to see children practically inducted into the secrets of nature, and acquiring by actual observation and experiment an amount of valuable knowledge which no mere study of text-books can possibly bestow.—*Washington Chronicle.*

MORTALITY IN HOSPITALS.—The destructiveness of war is horrible enough under the most favorable view that can be taken of its ravages. Its fatality, however, is often exaggerated, and many have visions of the hospitals, as if they were places haunted every hour by death. But this, for the most part, is not true. For instance, in nine hospitals, six in Baltimore and three in Annapolis, having in the aggregate nearly five thousand patients, there was during an entire week only one death. Undoubtedly this was an exceptional week. But even allowing a much larger percentage, the fatal cases would not exceed those among the same number of people in any community. Leaving out of the account the severely wounded, the result from time to time of terrible battles, it may be assumed, we believe, that the chances of recovering in the military hospitals are as great if not greater than anywhere else. It is the concentration of disease that gives rise to the erroneous popular impression in regard to the excess of mortality in these institutions.

WELL PAID LABOR.—A gentlemen just down from Owyhee, whose statements may be relied upon, informs the Dalles *Mountaineer* that the regular wages paid men for working in quartz claims is $7 per day; a large number of hands are employed at this figure, and a still larger number could find employment. Truly the Northern country may be said to be the workingmen's paradise.

Purification of Gold.

At a meeting of the Chemical Society in London, some three years since, an interesting paper was read, on deteriorated gold, by Mr. M. Warrington. He found that a large quantity of gold sent from the Bank of England was singularly deficient in ductility; it was so "rotten" that it could not be rolled or subjected to the usual process of coining. He found by analysis that the specimen contained 92 per cent. of gold, 4 per cent. of silver, and 2 per cent of tin, and a small proportion of antimony. The presence of this latter metal was supposed to be the cause of the alteration in the usual mechanical character of the gold, and it was no easy matter to extract it economically without loss of the precious metal. After several experiments Mr. Warrington found that oxide of copper when melted with the gold, in the proportion of about ten per cent., removed the antimony; the copper parting with its oxide to the antimony, which then rose to the surface as a powder, and could be cleared off. When, however, this process was attempted on a large scale by the metallurgist at the mint, it was not found to answer, and Mr. Warrington was again applied to. The gold had been melted in the usual black lead or plumbago crucibles, the carbon of which had combined with the oxygen, and thus prevented the proper action of the oxyd of copper on the antimony present. On the substitution of clay crucibles for those of black lead, the process was found to be very efficacious, and the difficulty was removed. Mr. Warrington having observed in the course of his paper that there was difficulty in accounting for the presence of the antimony, another member stated that when at the Australian gold fields, he noticed large quantities of almost pure antimony in veins close to the quartz from whence the gold was obtained, therefore there could be but little doubt how the gold became deteriorated. In papers read by other members of the society, they stated, as result of experiments on a large scale, that gold is to a certain extent volatilized during the progress of cupellation, a small proportion of the metal having been found deposited in the flues of the furnace; and that gold is also in a slight degree soluble in pure nitric or nitrous acids. In the course of the discussion, after the reading of these papers, one gentlemen mentioned that he was in Australia soon after the introduction of the quartz-crushing machines, when he observed great difference in the amount of the produce of the amalgamated gold on different days; and on examining the "tailings," or refuse of the mill, he perceived a quantity of gold had passed through without amalgamating with the quicksilver. This led him at once to suspect that the surface of the gold was covered with some noctuous substance that obstructed its combination with the mercury, and on treating it with an alkali, he found that the metals readily combined. He consequently recommended the mixture of wood ashes with the powdered quartz, by which means the daily product of gold has been equalized, and in some instances greatly increased. On afterwards subjecting the tailings to the same process, more gold was extracted from the refuse than had been obtained when the powdered quartz was first operated on.

RELIGIOUS ATTITUDE OF THE AGE.—On the other hand, there is an evil side to the religious attitude of the age. It is the disposition to accept as a finality that condition of hesitation and uncertainty which in the nature of things should be one of transition. There is an unavowed feeling current through the higher minds of the age, that a definite Faith is an unattainable good; that the larger a man's mind, and the broader his grasp of the great facts of life, so much the more cloudy must be his creed, so much the feebler must glimmer for him the ray of Light Divine whereby earth's pathways are cheered for humbler souls. It is not merely that men do not now hope to reduce all the awful mysteries of theology to half a page of formularies. It is not merely that they have ceased to look for celestial manna of infallible doctrines, rained down by Book or Church, for mortals to gather up and be fed. They no longer hope to have any theology at all. They no longer look with filial confidence to the Father of Spirits for that bread of life without which our souls must faint and perish. Here is the real weak point of faith, properly so-called; not the faith in books or churches, but in the ultimate intuitions of human nature; those intuitions which tell us that the Creator cannot leave unsatisfied the greatest want of his noblest creature, while He openeth His hand and fulfilleth the desire of bird and brute; those intuitions which tell us that all which has glorified and hallowed the past, which has exalted man into the martyr, and purified him into the saint—the religion which has been the source of everything most beautiful and everything most holy, cannot be a dream and a mistake.—*Fraser's Magazine.*

ON the night of August 6th, an attempt was made to burn Summit City, in Alpine county, by setting fire to Casy's private boarding house.

Passing Under a Cloud.

The Pacific coast is passing through a panic of extreme severity. Business stagnates, stocks sink in value, people despair. What does it all mean? Whither does it tend? What is to be the result? The answer is simple. The war has not caused it, for those States which lie nearest to the seat of war exhibit a material prosperity and vigor such as has not been witnessed since the opening of the rebellion. The cause is local, to be sought for at home; to be explained by the conduct of our own people. The prosperity of the Pacific States depends largely upon the wealth of our mineral products. To destroy these would be very much like laying the axe at the root of the tree. Has this been done? Has the dreadful truth been made known that our mines are a sham, that our silver and gold are no more? God forbid! In every community will always be found a class of men who make it their business, by apparently honorable means, to obtain a living out of the credulity and greed of their fellows. Men of this class swarm in the Bay city, overflow the precincts of Montgomery street, and elbow you in the Brokers' Board. They are mostly men without means, and with but little more principle. Ingenuity, device, deceit, are their weapons. Their wallets are stuffed with mining certificates, they carry with them a little cabinet of specimens. Here is a specimen of ore taken hap-hazard, here is so much stock in the mine—you cannot make a better investment. The assessments will be light, if any; the mine will soon pay its way, and then your fortune is made. Now it is undeniable that hundreds of mines are incorporated by these people which have scarcely any existence, and often not even a locality. Any lithographer will furnish the certificates, and the specimens are readily obtained from bona fide mines, or carefully selected from paying ore. The principle is not a new one. You may find it more or less existing in all the industries of life. In the present instance it has been pursued with a vengeance. Thousands have been invested by the unsuspecting, whose minds have been captivated with the idea of rapidly accumulating fortunes, till at last the thing has run itself out. The blindness could not continue. The people found they had been imposed upon. Confidence was destroyed, and in consequence the whole fabric of our mining system is brought low. The good suffers with the bad, for men have no means of discerning the one from the other. They say if the Big Elephant be a lie, why may not the Gould & Curry and the Ophir be the same? And now we are lying for the time being helpless beneath the incubus of want of public faith. And yet, what is the fact? Have these dishonest men the Alladdin's lamp by which they can transmute the gold and silver veins of these mountains into dross? Will our shafts refuse to send up their hars of precious metal at their beck? Let any man fix a steady gaze upon this panic fear, and it will vanish like night before the sun. It is too unreal to have a continued existence. For, in truth, the the metallic formations of our present and future prosperity lie deep and firm all around us. We do not yet know the half of their secret. What we should do is what every honest miner does, who is by his own hard toil working out his own independence. We should frown upon these worthless, unprincipled men who are discounting honest labor, and casting suspicion upon these matchless mines, in their unworthy efforts to climb to wealth. And this can be easily done. Most men can readily acquaint themselves with the true prospects of a mining claim, and if this cannot absolutely be done they can at least exercise the same judgment they would exhibit in any other investment, and, first of all, be sure of the character of the agent with whom they deal. In fine, there is no legitimate cause for the present lack of confidence in our mineral treasures; the fog is even now thinning away, and before fall, the Reese River district, at least, will be sending substantial arguments from its door which shall convince the world of her stability, and, by inference, of the wealth of this whole vast section of the country.—*Reese River Reveille.*

Poverty a Relative Term.—Bulwer says that poverty is only an idea, in nine cases out of ten. Some men with ten thousand dollars a year suffer more for want of means, than others with three hundred. The reason is, the richer man has artificial wants. His income is ten thousand, and by habit he spends twelve or fifteen thousand, and suffers enough from being dunned for unpaid debts to kill a sensitive man. A man who earns a dollar a day, and does not run in debt, is the happiest of the two. Very few people who have never been rich will believe this, but it is as true as God's word. There are people, of course, who are wealthy, and who enjoy their wealth; but there are thousands upon thousands, with princely incomes, who never know a moment's peace because they live above their means. There is really more happiness in the world among working people, than among those who are called rich.

The Close of the Week.

These Saturday nights are the world's most genial half-way houses; the arbor with its welcome shade of the summer time; the old-fashioned fire-place, with blazing logs, of a winter's night that is windy and stormy and lonely; the place to stop at and be at rest; to court at and be happy in, shutting up the business of the week like a safe or a book with the addition of a lock and key. Heaven pity those who have no home to go to of a Saturday night—no place to lounge in, comforted by the thought that on the morrow they may be their own property, in spite of their employers and in spite of their own ledgers. Home, just thou. is heaven, almost; it is the concentrated genius of all that poets and painters, with pen and brush, have said about it, bearing in mind the sweet song of poor Payne, and not forgetting the pity for him which should show itself at such a time because he never had a home. Eternity's ages are shorter than the weeks of time; gray hairs should almost follow the setting of a Saturday night's sun, remembering the work of the week and its bearing upon our after life. Time moves on, but after death there is no time; God only can comprehend the space of the great hereafter. And so, as we mark these great weeks by almanac and clock, we are living centuries; our work of a week, trivial and great, sends its influence, for or against, through all the centuries which will not be recorded. May it be so with us all, that after the brief candle of our existence has gone down in the socket of the grave, we may rise from this last Saturday night to that better life which is a never ending Sabbath, a rest perpetual, and a happiness so great that the whole world cannot hold it.

Be What you Dare.—I tell you you may be mentally as great as you please. If you are not, it is your own fault. Do not say you have no genius for this branch of study, or for that branch. I tell you that you have a genius for any branch of knowledge if you only *will* to have it.

If there is any science you would like to master, no matter what that science be, and you should feel discouraged because of the difficulties which appear to start in the way, then remember that others, with more difficulties than you can possibly labor under, have mastered that very science. And why may not you? I tell you again, you may be mentally as great as you please. You *have* the ability. Begin, therefore, this very day, use what means you have just now for the accomplishment of your noble purpose. More means and opportunities will open up afterwards in ways of which at present you have no idea.

I would have every young man and woman, yes, and every child, form, from this moment, a firm and ardent belief, that you may rise to eminence in any science, in the study of which you have a desire to engage. It is a promise given mentally to the whole human race, that you may be what you dare to be; therefore, dare to be eminent in that branch of study on which your heart may be set.

The Specific Contract Law Sustained.—The gratifying announcement has been made during the past week, of a decision by the Supreme Court of California, sustaining the validity of the Specific Contract Laws of the State. The decision was made upon the agreed case carried up from this city on appeal, and settles the matter fully so far as the Courts of this State are concerned.

Whaling in the Bay of Monterey.—The schooner Caroline E. Foote arrived at Santa Cruz, on Tuesday of last week, having succeeded in capturing five humpback whales during the last fortnight. The whaling business on this Coast, especially in and about the Bay of Monterey, is assuming quite an importance, and is proving very profitable to those engaged in it.

About the Army.—The resignation of Major General Fremont promotes General Butler to the third in rank of Major Generals, going by date of commission. It also leaves a vacancy in the regular army, which will probably be filled by the appointment of General Sherman. The resignation of General Buell also leaves a vacancy in the volunteer service, which will be filled by some worthy soldier. In the regular army, McClellan is the senior, Major General Halleck the second, Butler the third.

The new placer gold diggings lately discovered at the headwaters of the San Joaquin are exceedingly limited. The best claims pay from six to eight dollars per day.

The four companies at Fort Churchill, N. T., are ordered to leave for Camp Douglas, Utah Territory.

Milling in Washoe and Reese River.

We often hear it remarked that were our mills as capable of working ores as are those of Virginia and Gold Hill, we would be in a much more prosperous condition. We think that such a comparison does our millmen great injustice. The mills of that section are far more numerous, contain a great many more stamps and pans, have far greater power, and of course are capable of doing a vast deal more work than the mills of Austin. That they are capable of doing better work than our mills, we do not believe, and know that as a rule they do not do near as well. The rock furnished the mills of Washoe is of poor quality but immense in quantity, and it is therefore necessary to work it rapidly and cheaply. Valuable ore, such as is raised at Austin, is not attempted to be worked in Virginia, but is usually sent to San Francisco and Europe. We see it stated that one of the principal mills has contracted to crush one thousand tons of rock and return 65 per cent. of the assay value, less $20 per ton. Should the ore taken out be worth $100 per ton, the return would be $15, or for rock worth $50, the return would be $12.50. This is probably a fair sample of the working of the ores in Virginia, and the prices asked. Such returns for large quantities of poor ore are very good, and without doubt satisfactory; but such returns would not satisfy the miners of Austin, and they are besides willing to pay much higher rates for much better work.

The ore from the Esther claim, assayed value upwards of $1,700 per ton, was worked at the Pioneer mill at a cost of $100 per ton, and to within fourteen per cent. of the assay; the return being about $1,400, while at the Washoe rates it would have been but a little over $1,000. The mills of this city are willing to contract to work ore to within twenty-five per cent of the assay of the rock, and of course must charge higher prices than where the rock is of less value and worked with less care.

More than all, that our mills should not be rated less capable than those of Virginia, is that the managers of them are graduates of that school, know all their ways of working, and have made many improvements thereto. We do not contend that our mill men are perfect in their art; some we think are very deficient, but in general, we believe that their varied experience has given them a better knowledge of the means and mode required for successfully reducing rich ores than any of the same class on the Pacific Coast, outside of the most scientific establishments of San Francisco.—*Reese River Reveille.*

Cabinet of Minerals.—Mr. Shannon, of the firm of Shannon & Thornton, says the Reese River *Reveille*, is making a collection of choice specimens from our most prominent mines. When completed, the cabinet will be presented to the Mercantile Library of San Francisco, where it will constitute a perpetual exhibition of the wealth of Reese River. The owners of mines, in assisting Mr. Shannon in the formation of his cabinet, will have a fine opportunity of advertising their claims in a most conspicuous and desirable place.

The San Francisco Business Directory and Mercantile Guide, published by B. F. Stillwell & Co., is a neatly printed and bound work of 384 pages, containing the advertisements of many of our enterprising business men, interspersed with original and selected reading matter containing local and original information. A large edition has been printed and gratuitously furnished to all hotels, steamboats, literary societies, etc.

Increasing their Capital.—The Cinco Señores Gold and Silver Mining Company have filed, in the office of the County Clerk, their certificate for the increase of their capital stock from $500,000, to $1,000,000; which will also increase the number of shares from twenty-five hundred, to five thousand, being each of the value of $200.

Two More Rival Water Companies, one called the Clear Lake Water Company, and the other to be known as the Lake Merced Water Company, have filed papers of incorporation during the past week. There seems to be no danger but that our city will continue to be supplied with pure water, and at cheap rates.

Women possess as much intellect as men, but their tenderness and modesty unfit them for the duties of a public life.

A curious specimen in the shape of a three legged chicken, was recently brought to life on a ranch near Monterey.

Impurities in the Atmosphere.

Some curious facts have lately been developed in reference to the impurities floating in the atmosphere. Mr J. Samuelson has been investigating the traces of animal life in the dust of the air, and gives the following as part of the result of his observation:

"He had taken rags imported from various countries, and shaken the dust from them into distilled water, which he then exposed to the atmosphere; and after describing generally the character of the living forms he had discovered in this pure water, he stated in detail the forms of life found in each kind of dust, and among them were some new species of rhizopoda and infusoria, and an interesting ciliated, worm-shaped form, which he believed to be a collection of the larvæ of some other infusoria. The general result of the microscopical examination of these fluids was as follows: In the dust of Egypt, Japan, Melbourne, and Trieste, life was the most abundant, and the development of the different forms was rapid.

In conclusion, he observed that if he was correct in supposing the germs of the living forms that he had described to be present in the dust conveyed by the atmosphere, and in distilled water, it was worthy of notice that these germs retain vitality for a long period, of which he could not pretend to define the limit. In his experiments they outlived the heat of a tropical sun and the dryness of a warm room during the whole Winter; but in Dr. Pouchet's case they retained their life 2000 years, for he obtained his from the interior of the pyramids of Egypt, and they survived an ordeal of 400 deg. of heat. He suggested whether the great rapidity with which these germs are multiplied might not account for the spread of epidemic diseases. He did not profess to have any acquaintance with such diseases; but might it not be desirable to subject the atmosphere of hospitals to the microscopic test?"

Professor Wyman, of Cambridge, has published an account of other kinds of bodies which he found in the dust floating in, or deposited from the atmosphere:

"The dust was obtained either from the floor of an unoccupied attic, or from plates of glass covered with glycerine and exposed to currents of air. The organic matter detected by the aid of the microscope consisted of various minute fragments of vegetable tissues, such as woody-tissue, spiral-ducts, hairs, pollen, etc. A few starch granules, resembling those of wheat, and giving the usual reaction with iodine, were occasionally found.

In a dust from an attic over a frequently occupied college recitation room, human cuticle and epithelium scales from the mouth were detected. The lecture-room and attic communicated freely by a ventilator. There were also found, less frequently, however, various spherical bodies; some of them spores of cryptogamous plants, and others resembling the eggs of some of the smaller invertebrate animals. Professor Wyman was unable to identify the bodies in question, except that in one instance he detected the spores of a confervoid plant. As these were found before the conferva were beginning to be developed, it is probable that they came from plants of the preceding year, and had been carried about by the winds after the drying up of the stagnant pools, in the latter part of Summer or Autumn. Some of the egg-like bodies appeared to contain an embryo, which could not be referred to any particular species.

One of the spores detected was especially interesting from its resemblance to pus and mucous corpuscules; so close was the resemblance that one might be readily mistaken for the other. The fact is important, when considered in connection with the recent attempts made in Germany to establish the presence of pus in the atmosphere, and in this manner explain the transmission of certain forms of disease. The existence in the atmosphere of a large number of spores of cryptogamia, gives a probable explanation of the transmission of certain of the algæ and fungi, which infest the bodies of men and animals."

A Beautiful Thought.—A writer whose life has passed its meridian, thus discourses upon the flight of time:

"Forty years once seemed a long and weary pilgrimage to make. It now seems but a step. And yet along the way are broken shrines, where a thousand hopes have wasted to ashes; foot-prints sacred under their drifting dust, green mounds where the grass is fresh with the watering of tears; shadows even which we would not forget. We will garner the sunshine of those years, and with chastened step and hopes, push on toward the eve.

Recent advices received at the State Department contain the important announcement that upwards of ten thousand Swiss emigrants now await passage to the United States at Havre and other European ports.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, August 20th, 1864.

A much better feeling has pervaded the share market this week, and nearly all prominent stocks were actively dealt in. A number of speculative shares were buoyant at enhanced rates and are still in favor. An impression prevails among many dealers that a turning point has at last been reached, and that prices will continue to improve. Productive claims, with scarce an exception, are all thought to be more promising than for some time past, and their increasing yield of Bullion, together with more economical and judicious management than heretofore will not only tend to restore confidence, but materially stimulate the market and revive speculation. The decision of the Supreme Court affirming the binding force and validity of our Specific Contract Law, has given greater ease to the money market, and some important loans were made this week based upon mining stock collaterals.

Gould & Curry opened at $1,400 on Saturday last, rose to $1,500, receded to $1,450, advanced to $1,510, fell to $1,460, rallied to $1,560, then dropped to $1,400, seller 30, again rose to $1,460, declined to $1,360, sellers option, and closed last evening at $1,460; 99 feet have changed hands within this range. Advices from the mine are favorable, and there would appear to be no change in the character of the body of ore found in the drifts from the lower shaft. The prospecting shaft is now down 105 feet and will be sunk 400 feet deeper as soon as practicable.

Savage continued to improve early in the week and was in decided request, advancing from $1,190 to $1,400, sellers option 30 days, receding to $1,300 and held last evening $1,275; 20 feet were sold at these rates. The receipts of Bullion from this mine have been heavy so far this month and exceed $110,000. The quantity of good ore daily sent to the different mills for reduction is larger than ever before.

Potosi rose from $775 to $900, and was sold yesterday at $875. Judge North has removed the restraining order issued against this Company at the instance of the Bajazet, and active operations have been resumed. The order of injunction against the Bajazet has also been dissolved, and the Company are at work again at a point some 150 feet above the lower working level of the Potosi mine.

Belcher has been inactive at about $850 to $875. This Company are drifting north and southwest of their ledge, at a depth of 350 feet, and they will soon cross-cut and breast out which will enable them to remove a large body of fine ore. The pay vein at this depth is 15 feet in width.

Chollar has materially improved and large sales were made, advancing from $375 to $525, buyer 30, receding to $500, and closing at $500; 106 feet changed hands. In drifting to the southwest from the 4th level a vein of fine ore six feet in width has been reached, which promises to reveal another chimney of pay mineral in this mine. This new deposit improves as the drift extends, and is located about 40 feet north of the "burnt croppings" and 100 feet west of the west line of the Potosi Company. In the 4th level work is energetically progressing, and a number of mills are constantly employed in crushing ore hoisted from this portion of the claim.

Ophir has been very largely dealt in at fluctuating rates, receding from $520 to $500, advancing to $570, dropping to $500, then rallying to $540, again declining to $515 and $500 and selling at the close at $475. 58 feet have changed hands at these rates. Recent developments are said to be somewhat encouraging and the prospects of the Company are regarded with rather more favor.

Yellow Jacket was sold at $450. Empire Mill and Mining Company is offered at $550 and Sides at $175. Uncle Sam was moderately dealt in at $210, but is now not offered under $250.

Hale & Norcross was sold at $300. This Company have drifted from their 545 feet level a distance of 50 feet and momentarily expect to reach the lode at this point. The clay wall has been penetrated in drifting from the 500 feet level above.

Imperial is in rather less favor and has declined from $133 to $125 seller 30, closing at $130 asked—155 shares were sold. Receipts of Bullion from this mine continue large.

Burning Moscow has been in request and rose steadily from $14½ to $20—117 shares changing hands. A small force is regularly employed in developing this claim.

North Potosi was exceedingly active at fluctuating rates—opening at $40, advancing to $60, receding to $55, again rallying to $62, then dropping to $50, selling yesterday morning at $55 and closing at the afternoon Board at $35. Up to the present hour no decision has been made by the Referee in the case of the Gould & Curry vs. this Company.

Wide West has continued in request and 468 shares were dealt in, advancing from $25 to $20, declining to $17, rallying to $19½, then receding to $15, selling yesterday at $19 and closing at $18. A recent crushing of ore is said to have yielded $65 per ton.

Lady Bryan steadily declined from $3¾ to $1½ and sold yesterday at $4¾—an assessment of $3 delinquent. 805 shares have changed hands.

Melones fell from $17 to $13½ and then rose to $17. Experiments are being made in this city with a quantity of ore thought to be valuable.

Sheba suddenly fell upon the announcement of an assessment, to $6, but has since risen to $20. The Company's 20 stamp mill will soon be at work. 1,000 tons of second class ore, assaying $100 to $350, are now on hand at the mine—12½ tons of first class ore were forwarded to Europe last week worth over $1,000 per ton. The recent assessment of $20 per foot reduces the indebtedness of the Company to about $14,000.

Baltic has risen from $10 to $13; Nevada (J. G.) was sold at $9; Golden Age & Empire at $7; Seneca at $12; Bajazet at $15 and Real Del Monte declined from $17½ to 14½.

Spring Valley Water Company was sold at 36 per cent. on amount paid in. San Francisco Gas was dealt in at $85, and State Telegraph at $33.

The aggregate sales of stock since Saturday last amount to $322,479.25.

Sales of Mining Shares

For the week previous to Saturday, Aug. 20.

By the San Francisco Stock and Exchange Board.

Mechanical.

American Experiments on Steam Expansion.

Mr. George V. Hecker, of 239 Cherry street, New York, has been for some years occupying toward scientific investigators the same munificent position, which in the case of Boulton, has forever connected his name with the department of steam engineering. The experiments of Hecker and Winterman are now most deservedly attracting attention as, of old, did those of Boulton and Watt. These experiments are being made to ascertain the actual advantage of working steam expansively, in a cylinder, both with and without a jacket of steam. It is with great pleasure, therefore, that we announce that they have resulted in showing that there are conditions within ordinary reach, where part of the theoretical gain due to using steam expansively can be realized.

These experiments are conducted under a test of the work done, which is so well approved by Mr. Allen, the head of the United States Government Commission, that it will form the standard measure in the experiments of that body, thus making both series, in this respect, easily comparable. Ready adaptation to different work, uniformity and accuracy are its recommendations. The cylinder employed is made of steel plate 1-10th of an inch in thickness, and is surrounded by a similar plate, the space between being 3-8ths of an inch thick. The whole is then secured in an ordinary cast-iron cylinder. The experimental engine has a cylinder ten inches in diameter, with two feet stroke. Experiments are tried with the space between the two cylinders filled with steam, and then under the same conditions without steam in this space. The engine is also worked as a condenser. For each experiment the engine is run constantly thirty hours, observations being recorded every hour.

We annex particulars of experiments when the space between the two cylinders was not filled with steam. In the first experiment of thirty hours the steam was cut off at—

⅞ths of the stroke.	⅔ds in the next.
½ in the next.	¼th in the next.

The regularity with which the engine was kept at constant duty is shown in the total number of revolutions of the engine and of the fan during each thirty hour's run. The total number of the revolutions of the engine during the thirty hours when the steam was cut off at—

⅞ths was 77,668	⅔ds was 77,625
½ was 77,627	¼th was 77,634

The fan is driven by a gear from the engine shaft, and the total number of revolutions of the fan during each experiment was in the—

⅞ths cut-off 123,229	⅔ds cut-off 123,128
½ cut-off 123,132	¼ cut off 123,147

The following are the results. The number of pounds of water evaporated during the thirty hours in which the steam was cut off at—

⅞ths was 16,622	⅔ds was 14,981
½ was 14,568	¼th was 12,826

The pounds of fuel consumed, adding the coal and wood together, and deducting the ashes, were—

⅞ths cut-off 1,635	⅔ds cut-off 1,401
½ cut-off 1,374	¼ cut-off 1,245

In all of these experiments the steam was condensed, and the space around the cylinder was not heated with steam from the boiler. It will be seen that, under these conditions, a given amount of work could be done with considerable economy in the evaporation of water and in the consumption of fuel by working the steam expansively; the saving in cutting off at a quarter instead of seven-eighths being about 25 per cent. These were the mean initial pressures in the several experiments—

⅞ths cut-off 30.6	⅔ds cut-off 33.3
½ cut off 38.1	¼ cut-off 53.9

On these experiments the *Scientific American* remarks: "Had the experiment with the cut-off at seven eighths been tried with a smaller cylinder—a cylinder of such size as to yield the required power with steam at the pressure of 53.9 pounds per square inch—the result would have been different. As the proportion of the back pressure is similar in working steam at high pressure, the advantage must have been less favorable to the short cut-off.

In all investigations the great danger is of drawing a general inference from too few facts, and this is especially the case in regard to working steam."

A workman named Lehman, employed at Goss & Lombard's foundry, Sacramento, met with a serious accident Wednesday afternoon. While holding a piece of lead for a fellow workman to strike, the sledge-hammer missed the mark and struck Lehman's right hand. The three first fingers were badly crushed by the blow.

Brodie's Amalgamating Barrel.—James Brodie of San Francisco has obtained a patent for the use of blocks of wood, arranged endwise, as a lining to the amalgamating barrel, thereby greatly reducing the wear and tear by the friction of the ores, etc. We have already alluded to the introduction of this improvment at one of the mills in Virginia City.

A Mechanical Feat.—A steel driving-wheel tire, of a locomotive belonging to the San Francisco and San Jose Railroad, was welded recently by Mr. Newsomo, foreman blacksmith of the Union Foundry. His arrangements were such that he needed but three helpers on the work. The time is not far distant, we trust, when first class locomotives, entire, will be turned out of our machine shops.

First Anniversary of the Trades-Union.—A Committee has been appointed by the Trades Union to devise a suitable manner of celebrating their first anniversary, during the ensuing month. Within the first year of its existence, fourteen different branches of mechanical industry have united, and they hope during the next year to embrace every class of mechanics in the community. The objects of the Union are certainly praiseworthy, and we hope the celebration will prove worthy of the occasion.

A Novel Use for Corn.—American ingenuity has discovered a novel purpose to which corn can be put, namely, for stretching boots and shoes. The boot or shoe is well filled with corn, and made sure by such tight tying that none can escape. It is then immersed for several hours in water, during which the latter is distended by the gradual swelling of the grain. After being taken from the water a coating of neat's-foot oil laid on, and left to dry, renders the boot or shoe ready for wear.

Effect of an Air Blast on Heated Iron.—If a piece of iron is filed while hot, the filings appear to increase in temperature as they fall to the ground. This appearance is no doubt real; for if a piece of iron be taken welding hot from a forge fire and subjected to an air blast, its temperature may be kept up for some time, and the iron wasted away by the action of the blast. Nail makers formerly made use of this fact to keep their iron hot, by having a small bellows fixed in front of their anvils to blow upon the iron while they were working the same.

The Fire Alarm Telegraph.—The *Alta*, in allusion to the introduction of the Fire Alarm Telegraph system, which will soon be inaugurated in this city, says that the contract calls for a deal of work, which must be done in the most approved and workmanlike manner. The wires will extend from the main station to every engine house in the city, besides branch stations in all parts of the town. Five large bells will be sounded instantaneously by the machinery, and on the instant each engine house bell can be rung. This grand plan also embraces a police telegraph, a detective quick as lightning, and as sure as rapid. This must prove an invaluable auxiliary to Chief Burke's already efficient staff.

Too much praise cannot be bestowed on Mr. Street for the promptitude and energy he has displayed in bringing about this business arrangement, which, when carried out, will promote so materially the safety and security of both life and property.

The cost of the new Atlantic cable, now manufacturing, will be £700,000.

A New Patent for Separating Silver and Gold from Lead.—Mr. Edward Boelbaek, of Newark N. J., has obtained a patent for a new method of seperating gold and silver from lead, which is thus described in his specifications:

I claim, first, Melting the lead which contains the silver and gold in a furnace with an inclined hearth, and drawing it off into a kettle containing, or to contain, a proper quantity of zinc to take up its silver and gold, instead of melting it in the kettle, as and for the purposes herein described and set forth.

Second. Casting the mixture of lead, silver, zinc and gold, after it has been sufficiently stirred for the zinc to take up the silver and gold, into pigs or masses of suitable form and size to re-melt in the furnace.

Third, Placing these pigs or blocks of lead, zinc, silver and gold, in a furnace with an inclined hearth, and then subjecting them to a low degree of heat, sufficient to cause the lead to melt and run off, but not sufficient to melt zinc, silver and gold.

Fine Machinery.—Messrs. Devoe, Dinsmore & Co., of the San Francisco Steam Engine and Machine Works, have almost completed an overshot water-wheel, twelve and a half feet in diameter, twelve feet wide, and of eighty-horse power, which is to be used in a cotton factory in Sonora, Mexico, and is to drive seventy looms. This wheel was designed by Messrs. Brodie & Co., is made entirely of wrought iron, and is pronounced by competent judges to be the best piece of workmanship yet turned out on this coast. It is the first of the kind ever constructed on the Pacific. Its weight is twelve tons. Also, Messrs. Devoe, Dinsmore & Co., have manufactured a fine thirty-horse power steam engine, with pump and hoisting gear, for the Nahulia Mining Company, Mexico, by order of their agent and engineer, Mr. George Hirra. This machinery, together with the iron water-wheel and two complete quartz mills, (both of the latter built for Mr. Hirra, and to be used in Mexico,) will be shipped on the next steamer. The seventy-horse power engine and hoisting gear ordered by the Minerva Mining Company, Gold Hill, Nevada Territory, has at last been completed, and may be seen at the San Francisco Machine Works. This is doubtless the finest engine ever constructed in San Francisco, and is well worthy of inspection by such as are conversant with machinery, and able to judge of mechanical excellence; it is beautiful enough for a parlor ornament.—*Call.*

Quartz Mill Model.—Mr. John Wilvert, of Clifton, says the Reese River *Reveille*, has invented and constructed a model of a quartz crushing battery. The model consists of a framework of four upright posts standing in a plank; these posts are connected together at the top by cross pieces, the frame being about eight inches long by four wide and eight high; one end being the battery frame, in which are four stamps of squared wooden arms with iron heads. A short distance from the battery frame is a fulcrum shaft, on which are placed as many levers as there are stamps. In the proportion of twice the distance from the battery to the fulcrum shaft, is the cam shaft to operate on the levers in lifting the stamps. The battery is similar in many respects to one lately constructed by Gaston although Wilverth claims his as entirely original, having made the plan several years since. The features claimed as new and valuable, are placing friction rollers for the levers to act upon in lifting the stamps and attaching rollers also to the cams that bear down upon the levers. The superiority of this over the old method can only be proven by trial. We have a strong desire that the new inventions may succeed, to the utmost anticipations of the projectors, but as yet reluctantly confess that we cannot see their advantages.

Washing Machine.—A. Beebe, of the firm of Crowkite & Beebe, on J street, and Frank Wetzel, who works in the same establishment, says the Sacramento *Bee*, have recently been inventing a new washing machine, for which a patent has been asked. Those now manufactured are boxes 22 inches long, 22 inches deep and 18½ inches wide. On the bottom of the box are four cast steel springs, and on these springs rests a concave washboard, having twenty rollers. In the box revolves, when washing is going on, a fluted drum or cylinder, fifteen inches in diameter, and its length the width of the box. It will be seen that, covered by these springs, the clothes, be they large or small pieces, must get a regular amount of pressure, and are placed in conflict with two circular washboards. The first washing machine of this kind, made by Beebe & Wetzel, has been in use forty days, and has done the washing of four families with perfect satisfaction to all interested. In fact all the housekeepers who have tried this machine acknowledge its superiority, and will testify to its excellence. One of these washing machines will be on exhibition at San Francisco during the approaching Mechanics' Fair.

Forms of Domestic Utensils.—It is an axiom that whatever is truly great or practical is always based on simplicity. The beautiful outlines observed in Greek and Etruscan vases, and other domestic utensils have caused, much abstruse geometrical investigations into conic sections, etc., under the impression that those beautiful forms of art had been thus eliminated. A few years since, however, Mr. Dwyer, a member of the "London Decorative Art Society," commenced a series of observations and comparisons in which he fully established the fact that the ancient fabricators of those elegant domestic utensils, instead of diving into the intricate depths of geometry for the exquisite forms which they produced, merely copied the works of nature in some of her simplest and most unassuming forms. He showed that the leaves of the laurel, the apple, the geraneum, the thornbeam, the privet, etc., contained in their outlines precisely the forms which were developed in some of their beautiful works of ancient decorative art. Ancient architectural decoration is well known to have sprung almost exclusively from the natural productions of the forest and garden. Nature has ever been the great teacher of man. Her lessons are the very essence of simplicity, and she never yet led her pupils astray.

Labor—Ancient and Modern.—The great Egyptian pyramid cost the labor of about 200,000 men 20 years; the same amount of labor could now be performed by 20,000 men in five years.

A Seamless Keg.—It is said that an ingenious mechanic in Hartford, Conn., has invented a "seamless keg," turned out of a solid piece of wood.

White beans are the cheapest and most nutritious food which can be eaten. Beans and pork furnish nearly all the elements necessary to human subsistence. A quart of beans at eight cents and a pound of pork at twelve cents will feed a small family for a day. Four quarts of beans and two pounds of corned beef boiled to rags, in fifty quarts of water, will furnish a good meal for forty men, or one and a quarter cents a meal.

An enterprising but ignorant South American has sent to an Albany locomotive shop for one hundred "cow catchers." He expects to use them in taking wild cattle on the plains of Paraguay, in place of the lasso.

As usual in the Massachusetts State Prison, the 4th of July was celebrated in fine style, and on the vote being taken, the prisoners were found to be unanimous for liberty.

The less a man does the more fuss he is apt to make. A hen with one chicken does more scratching than if she had a family of fifteen.

Goats.—Another drove of goats arrived at Gold Hill, a few days since. The ready sale met by the first drove has encouraged the importation of that style of horned cattle.

It is a beautiful saying of somebody that gratitude is the music of the heart when its chords are swept by the gentle breeze of kindness.

A severe drouth is prevailing in Minnesota. The ground is said to be dried several feet below the surface. Wells and cisterns are dry, and the streams and lakes alarmingly reduced.

A salute of 100 *anvils* was fired at the Dalles, (Oregon), in honor of the passage of the bill providing for the establishment of a Branch Mint at that place.

Gen. Robert Toombs, formerly Senator in Congress from Georgia, and then General in the rebel army, is now a private in a Georgia regiment.

A preacher in Stockton appends to the notices for his religious services, "no collections."

The Territorial *Enterprise* of the 11th inst., contains nearly six columns of names (big columns and small type) asking Judges North, Turner and Locke to resign forthwith.

The Nevada Constitution is to be submitted to the people on the first Wednesday in September.

Release of Mr. Weller.—Mr. Weller was released from imprisonment at Fort Alcatraz, on Wednesday last, on his taking the oath of allegiance and entering into bonds in the sum of $25,000, to keep the peace, and in all things conduct himself as a good law-abiding and loyal citizen of the United States.

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

CALIFORNIA.

The Nevada *Transcript* says that Mr. Tallmaa is experimenting in roasting copper ore at Spenceville, which, if successful, will bring into the market a large amount of low grade ore which will not pay on account of the immense cost of transportation. He proposes by the roasting process to expel the sulphur and other constituents of the ore, lighten the weight, thereby raising the per cent. Hundreds of tons of this low grade rock have been taken out, and if measures can be devised for its reduction, considerable money can be realized.

A nugget of pure gold, weighing 16½ lbs., was found a short time since on the North fork of the American river, near Michigan Bluffs, Placer county. The run for the week on this claim was $5,400, only eight men being at work. The Democratic *Press* of this city remarks upon the above facts, that hundreds of men are leaving California for mines in other parts of the country, but we doubt if they will find anything better than our own placer mines. There are millions of dollars worth of gold in our own State—it only requires stalwart arms to bring it forth.

The Jackson *Ledger*, of Amador county, says that the Garabaldi company, located about one and a half miles north of Drytown, formerly Hunt, Paggio & Co., is thought to be a rich lode. Uncle Billy Rogers, better known as Garabaldi, recently bought into the above claim, paying for one seventh of the same the handsome little sum of $500, hence a change of name for the company. They have a shaft down some fourteen feet and are taking out gold bearing rock that prospects from $50 to $75 per ton.

MARIPOSA COUNTY.—The Mariposa *Gazette* says that during the past few weeks there has been quite a mining excitement in that region, caused by the reports of rich and extensive diggings on the head waters of the San Joaquin, about 120 miles to the east. A large number have gone there, but during the past week many have returned, and report the amount of mining ground very limited in quantity, and not rich. There are but few claims, and they are situated in a cañon, the soil is not deep, and the pay dirt far from being extensive. Two or three companies are working Chinese, and manage to take out an amount averaging from two to three dollars per man. This is certainly not very encouraging. Many who went there will return, while others are prospecting beyond the locality of the above diggings. The whole thing is a very sizeable sell.

The Downieville *Standard* says that the returns of the Keystone mill, from a run of twenty-three days, and crushing 300 tons of rock, was $5,500.

The Quincy *Union* learns that the Batte Ledge company are taking out rock which assays as high as $800 per ton. We trust their rock will prove rich—although very little idea of the value of gold bearing rock can be learned from assay.

MOUNT DIABLO.—The Contra Costa *Gazette* says that, notwithstanding the prevailing depression in mining interests generally, an increased activity seems to be manifested in the mines about Mount Diablo. The miners there continue to push on their work with unabated zeal, and increased confidence in the ultimate success of their labors in developing valuable and permanent veins of mineral. The Mount Zion company have let a contract to run a tunnel on the vein, for 300 feet. It is supposed by some that the ore taken from this tunnel will be sufficient to pay for the labor performed. Should this be the case, the contractor will realize a clear gain of the price paid him per foot for the work.

In the Keokuk Company the quality of the ore grows better as the tunnel extends, and sanguine hopes are entertained that it will soon become a paying mine.

The Summit of Zion have not only run a tunnel some 270 feet in length, but are now engaged in sinking a shaft on the vein at the extremity of the tunnel, and most excellent prospects are obtained. The company have full confidence in the value of the vein.

The *Gazette* speaks very highly of the newly discovered Elmira lode, to which we alluded in our last, and pronounces the ore taken therefrom the best yet ever obtained from the Mount Diablo mines.

Work has commenced on the Pioneer, by running an incline on the vein. It is quite evident that the tunnels heretofore run have gone too high, going over the lead. By sinking it is expected to reach paying ore in a very short distance.

There are many other claims upon which work is being done. The Surprise is very highly spoken of by those familiar with it; the Superior is taking out very good ore, and a number of others.

REESE RIVER.

Reports from Reese River still continue favorable. If reports from that region are to be credited, Reese River will soon become a noted country for wealth and progress. They claim that their mines are rich at the outcrop and grow richer as they descend. We quote the following from the *Reveille*.

New mills are constantly going into operation. Since our last issue we learn that J. W. Earhart & Co., have their new four-stamp quartz mill in successful operation, which is doing work satisfactorily to those concerned. The proprietors will run it by horse power in a few days and expect to crush 1,000 pounds per day. The stamps weigh 50½ pounds each. Mr. Earhart will build one for the Harding & Diekman mine next week. These we presume are *progressive* hand mills.

J. L. Overton & Co., will build a four-stamp quartz mill, to be propelled by water power, about seven miles east of Austin.

The *Reveille* says that the four-stamp hand quartz mill owned by William Richards & Co., was put to work on the 4th inst., and did as well as was anticipated. It will crush between four and five hundred pounds per day. We hope to see many of these mills in operation. It requires but a small capital and is a splendid investment. Let's have more mills speedily—steam if we can, but hand ones if we must.

The new roasting furnaces at the Oregon mill have been completed, and the carpenters are engaged in erecting a furnace building over them, which will be finished in a few days. The company have on hand, ready to amalgamate, $35,000 worth of crushed and roasted ore, but cannot run to within more than one-eighth of the capacity of the mill on account of the pans being worn out. New tubs will be there and ready for use by the 1st proximo, when they will turn out the silver bricks in quality and quantity that will astonish the natives. The new furnaces will not be used until the new tubs arrive and are put up, as they cannot amalgamate all the ore that is now roasted.

The Oregon mill, says the *Reveille* of the 2d inst., is now working rock that yields $1,500 to the ton. There was 3,407 ounces of bullion left at the assayers from this mill yesterday.

The Oregon, one of the best lodes belonging to the Oregon Mill and Mining Company, has been allowed to lie idle a great portion of the season, but is now being worked again. It may be classed as among the best of the Reese River ledges.

IMPORTANT SALE OF FEET.—The proprietors of the O'Hara ledge, in the Amador District, seven miles from Austin, recently sold to Henry D. Bacon of St. Louis, Missouri, six hundred feet in that ledge for the sum of $32,000. Mr. Bacon is now on his way to Mexico. On his return to Reese River, which will be soon, he will commence the erection of a mill.

J. D. Emmersley having a claim and wishing to test the quality of rock in it purchased a two-stamp mill, constructed by Mr. Atchinson, and is now running it steadily, near D. E. Buel's new residence.

The Buel North Star, recently shipped a very nice brick weighing 600 ounces, being the first that has ever been taken out of the mine, and will not be the last by many thousand dollars.

The Whitlatch Union, up to the 9th inst., had been under its present superintendent but six weeks and the mine had scarcely begun to be developed, yet in that short space of time they had sent forward bullion to the amount $15,000.

The Florida Company have shipped a fine ingot, valued at $400, obtained from between one and two tons of rock. The company have been taking out some very fine sulphuret rock, but were so troubled with water that they have found it necessary to suspend work on the deep incline. They are now taking out some very rich chloride from near the surface.

The Savage claim, located on Austin Hill, is said to be from twenty inches to three and a half feet in width and is throughout remarkably rich. The company is taking out very rich ore. They have recently put up steam hoisting works, the first and only work of the kind in Reese River.

The Esther mine shipped $3,000 worth of bullion on the 2d instant, and will still continue the good work. They have hardly commenced developing the mine yet, and have taken out bullion to the amount of over $6,000.

John Van Valkenberg sold a few days since ten feet in the Fenian Star ledge at $24 per foot, which is considered a very good sale considering the depression of the stock market and that the claim is as yet almost undeveloped.

The Gov. Seymour Company shipped a fine silver brick last week, and the Whitlatch Union sent forward two of the same sort.

OUTSIDE MINES.—All the above noticed mines are located in or directly in the vicinity of Austin. Following hard upon these home developments are those of many of the outside locations. One of the latest and most favorable of these was made in the Ruba lode at the little village of Pizarro, in San Francisco Cañon. The claim consists of only eight hundred feet and is opened by an incline one hundred and twelve feet in depth. At this point water was reached simultaneous with the striking of a rich vein of ore of antimonial sulphurets of silver. The lode is thirty inches in width and furnishes a large lot of first-class ore. A lot of five tons has been brought to a mill in Austin for working and large results are anticipated.

Mr. Boyd, superintendent of a number of claims in Smoky Valley District, exhibited to the editor of the *Reveille* some rich sulphuret ore taken from a ledge lately struck in a tunnel which he is running.

THE PLEIADES.—J. C. Elster arrived in Austin on the 10th inst., with a load of quartz weighing four thousand pounds, from the Pleiades claim in Ione, for the Union mill. Two wagon loads from the same claim and for the same mill arrived two days before.

ESMERALDA.

The Utah Company, on the 8th instant, according to the Esmeralda *Union* paid off all the hands employed in the mine, about thirty in number, in United States coin, without having to levy an assessment for that purpose. Many are disposed to believe that this company has levied its last assessment, and that hereafter the mine will at least pay the expenses of the company.

The Toledo Company is making satisfactory progress, considering the exceedingly hard character of their rock.

THE WIDE WEST.—This mine, says the *Union*, once a general favorite with stock speculators and adventurers, and mining capitalists, is again coming into public favor; and the consideration it receives, and assuredly merits, has not originated from the legerdemain tricks of transmutation practiced with stocks at Broker's Boards, before an observant, though credulous public, but from the acquisition of better information respecting the condition and probable prospects of the mine and mill. With perseverance unflagging, by the employment of men of greater skill and experience to direct operations about the mine and mill, and the practice of better economy, the evil day of the company has passed and a brighter one is succeeding. Through the skill of their new and efficient superintendent, Mr. Leeds, a never failing supply of water has been obtained for the mill, thereby augmenting the value of the property fully fifty per cent; and in his late selection of foreman he has given another evidence of sound discernment, while also of fidelity to the interests of the company. Let other mining companies adopt the policy of the Wide West, viz: employ skillful and industrious superintendents—not men who loiter half their time in the streets, about saloons, or confine themselves to their offices—but active, energetic men—feeling not a languid, apathetic, but vital interest in the welfare and prosperity of the company employing them, and our word for it the company so doing will have occasion to levy fewer assessments on stockholders, and the sooner will become self-sustaining if not dividend-paying.

WASHOE.

The Bullion Company, according to the *News*, from which we condense the following items, has the best machinery and the deepest shaft of any in that vicinity. It is right on the range between the Virginia ledges and the Gold Hill ledges, and yet, we believe, it has never struck anything of much account. It seems almost impossible to miss the lodge which is being sought for, and it is not very easy to account for not striking it before. The general opinion is that the ledge sinks between the Chollar and the Alpha, and that it can be found by the claims lying between only by going very deep. The Crœsus has struck it, but will have to go deeper to get pay rock than the claims north of it have done. The probability therefore is that the Bullion, the Omega, Minerva, and the Superior, will all have to go down 500 or 600 feet to find the ledge, where it will yield pay ore. The company has the necessary machinery to enable it to go down to the required depth.

The work of prospecting, says the Virginia *Enterprise*, has by no means been suspended on the many promising claims about Gold Hill and American Flat. The Crown Point Ravine, the Ureka, Yolo, Jewett, Fair Play, Jackson, Astor and a host of others are actively engaged in the development of their several claims. They are all satisfied that they have a good thing, and are bound to find it or "bust"—pecuniarily—in trying.

The Crœsus Company have their drift down to a depth of 425 feet. The affairs of this company, says the *News*, are managed by men of integrity, honesty, and ability, and who have the confidence of people who have business with them.

The Original Hawkeye company has struck some very fine rock in its claim. The company is confident of finding pay rock. It is having no water in its works at present, and can drive work ahead with rapidity.

The Uncle Sam has struck more water. The water was struck in a drift which was being run from the shaft to the ledge at about one hundred feet deeper than the ledge has heretofore been worked. The company will have a gallery run in and will commence taking out pay rock again in a few days.

The tunnel in the Mary Queen of Scotts claim which was commenced only a few weeks ago, is now in about 110 feet. It has been run along very rapidly considering the fact that considerable part of it has been ran in hard blasting rock. The water increases rapidly, though in hard rock. When the tunnel has been run 200 or 300 feet farther, the supply of water which it will furnish if it goes on increasing at its present rate, will be nearly enough to supply a large mill.

The Milton continues to take out lots of splendid rock, and to supply two or three mills, the average yield of a number of tons of mixed rock which was worked at one of the mills, was about $35 per ton. That is pretty good, and is sufficient to leave a large margin for profit.

The Chollar Company is at work again. It has received its new shaft, put it in, and made all repairs and preparations necessary for a long run. The company is now hoisting the rock which has been taken out and stowed away in the mine, during the time the machinery has been lying idle.

The Belcher Company, according to the *Enterprise*, are progressing finely with their work. The last lot of rock taken from the lower part of the mine—amounting to six tons—was crushed separate from that taken out above, in order to test the value of the vein at the greatest possible depth. The ore was crushed at Hurd's Eureka Mill and yielded $770 per ton. The company have just ordered a new engine and boiler, to be used in connection with their present machinery whenever it may become necessary. As soon as their new machinery is started, the company will be able to supply more than twice as many mills as are present running upon rock from this mine—also to supply them with richer rock, as it will come principally from the lower level.

NEW DISCOVERY.—The Virginia *Union* of the 14th inst., speaks of some beautiful specimens of quartz shown by G. R. Godfrey, and taken from a lode discovered on the west side of Pueblo mountain, near its north end, which runs through the very heart of it, and is enclosed in a blue granite and limestone formation. The vein is one hundred feet wide, and these specimens are croppings knocked off with a shovel. He has prospected Pueblo mountain from one end to the other, and the mineral belt is fifteen miles long, and, at the north end, four miles wide, and his opinion is that it is the most extensive mineral bearing mountain yet discovered on this continent.

HUMBOLDT.

We clip the following items from the Humboldt *Register*:

The El Dorado Company is in excellent spirits. The workmen recently struck the Banner ledge, finding it six feet wide, and closely resembling the rich ore of the De Soto. The company is in excellent financial condition, and will undoubtedly arrange to work the ledge right along, furnishing ore to the Sheba mill.

THE EMPIRE.—This is the name of a ledge in Indian District, a short distance from Unionville, formerly held by the Freeman company. An incorporation was recently effected under the title of the Empire Company. A superintendent was elected, and work is to be commenced at once. The claim consists of 1500 feet, the stock divided into 1500 shares of $100 each. The ledge crops "high and clear," eighteen inches wide on the top, and the ore can scarcely be distinguished from that in croppings of the Moonlight.

The Inskip ledge is coming in again all right, at the end of the tunnel. Judging by common report, we suspect the work in this claim has not been very gloriously bossed. Practical men say the workmen could just as well have been taking out first rate ore during the past three weeks, and improving the mine at the same time—simply by sinking in the ledge, instead of running the mole hole they have, just under the grass roots. We hope to see it turning out brisk again, without any further delay.

THE best vinegar used in France is made from grapevine stalks.

☞ For sale by Carriers and Newsdealers.☜

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:
Saturday Morning, Aug. 20, 1864.

MONEY MARKET.

The most interesting event in financial and business circles this week, has been the decision of the Suprems Court affirming the validity of the Specific Contract Law. Two legal questions were settled by the tribunal of vital interest to California. The constitutionality of the act of Congress, authorizing the issuance of a currency and making it a legal tender for the payment of all debts, there being no contract for the payment of gold, was also sustained, and the lower courts were instructed to act in conformity with this interpretation of the law. This vindication of the sovereignty of the National Government, as well as the constitutionality of our own laws is received with much satisfaction in this city, and cannot fail to have a good effect in giving greater activity to capital, and inspiring confidence generally among business men. The large amount of money hitherto unemployed and lying in the vaults of bankers and others in San Francisco, because of the fear that the Special Contract Act could not be legally enforced, will now seek an outlet and result in stimulating many enterprises requiring the aid of capitalists, and also, have a tendency to lower the rates of interest for regular business purposes. The money market is already sympathizing with this expected movement and no stringency is visible in any quarter. The current rate in bank is still 1½ per cent. per month. The continued buoyancy in the stock market imparts a very cheerful feeling to all dealers in first class shares, many of whom can now obtain facilities from money leaders that were rigidly denied them a short time since. We learn of some important negotiations based upon mining stock collaterals at 2@2½ ₱ ct. per month, and in some few instances loans were obtained at 1½ per cent. per month, the margin from present market value being ample.

LAUNCHES.—We have had two steamboat launches, at the foot of Third street, the past week. The first, a new tug boat, intended for Puget Sound trade, was launched on Tuesday evening last. She is owned by Pope & Talbot, who have not yet determined upon the name of their new craft. Her dimensions are: length, 130 feet; beam, 26 feet 8 inches; depth, 8 feet 4 inches. Mr. D. Marcuci is the builder. The boilers were made at the Pacific Foundry. She carries two 16 inch cylinders of five-feet stroke, and is very stoutly built.

The second, was the fine steamer built for the Stockton trade, by the California Steam Navigation Company, a description of which has already appeared in the PRESS. She was successfully launched on Wednesday evening, and christened "Julia."

Legal Tender Notes.

San Francisco, Friday, Aug. 19..... 39 per cent.

A BIRD'S EYE VIEW OF BUSINESS.

A wonderful improvement is manifested in the various departments of general traffic since the confirmation of the validity of the Specific Contract Law. Confidence which was wavering has been restored—money long locked up, or buried in the sand is now offered at current rates of interest. Merchants find no trouble in obtaining all the money they want for legitimate business purposes. The North coast is drawing large supplies of merchandise from us, and at the same time remitting freely of Bullion.

North Mexico is also sending us full supplies of her treasure, and taking in turn liberal stocks of goods. Washoe and other distant mining regions will soon be heard from, for their fall and winter supplies. In the interim our merchants are busy laying in stocks and preparing for an active fall trade which must soon open.

Our stocks of general merchandise are large and prices in the main low. This is particularly the case in regard to all foreign goods, as well as those from domestic supply ports. The contrary is the case in regard to domestic produce—which is owing to the short crop.

Take it all in all, our gold prices compare favorably with the inflated currency rates ruling in the Atlantic States, and ought to satisfy every one that gold and silver is the best for California.

EASTERN FINANCES.

We are in receipt, per the overland mail, of New York advices to the 25th ult. At that date the money market was less stringent than for some time previously and continued ease was looked for. The Treasury Debt was paying out the compound interest notes very freely as well as the reserve of legal tenders. Mr. Fessenden, during his recent visit to Wall street, expressed himself opposed to any farther increase of the currency, but probably now feels that it is impossible to float his 730-100 loan on a tight money market and therefore he must make it easier before he can hope to have it taken at par. The most gratifying feature of the Stock Exchange was the increasing demand for government securities and the rapid recovery of the several descriptions which had been temporarily depressed by the stringency of money, the consequent depression of business, the general diminution of confidence, and the incertitude as to the future policy of the new Secretary of the Treasury.

The Bank statements of the three principal cities were as follows on the 19th of July.

	Depositors.	Loans.	Specie.	Circu'n.
New York,	$151,816,947	$199,043,887	$21,234,354	$4,724,538
Boston,	30,534,051	66,079,329	6,246,319	9,890,372
Phila.,	36,462,271	40,733,324	3,948,440	2,208,368
Total,	$218,863,269	$305,856,540	$31,429,113	$16,822,978

The following shows the aggregate national debt as compared with former official statements.

	July 19.	July 12.	June 14.
Total,	$1,796,213,366	$1,795,033,569	$1,719,395,168

QUICK TIME TO ARIZONA.—A lot of freight which left this city on the Sovereign, was landed at La Paz, Arizona, in just twenty-eight days from this port. It was taken from the mouth of the Colorado to La Paz in the steamer Cocopa. This expeditious delivery of freight in Arizona, and all along on both sides of the Colorado, is the result of the determined effort of persons in this city acting conjointly with others located on the Colorado, for the establishment of an opposition line of steamers on the Colorado river. Four boats are now running on that river, and freight which formerly occupied five and six months in transit, is now taken to its point of destination in less than one month, at about one half the former cost.

ONE of the most daring attempts at robbery and murder ever recorded, occurred in this city on Wednesday last, on Commercial street, a few doors from Montgomery. The attempt was made between two and three o'clock P. M., in the immediate neighborhood of the busiest and most frequented locality in the city. The perpetrators, for in all probability there must have been more than one, are not known.

BRING OUT THE FIGURES!

SACRAMENTO, August 17th, 1864.

EDITORS MINING AND SCIENTIFIC PRESS:—As your paper is devoted to the mining interests, and by exposing all wrong doing connected therewith you benefit the public, I desire you to make an *expose* of the way the officers of the Coso company have managed affairs. The mine has been assessed $43,200 within the past year, and now the stockholders are informed by the papers that a judgment has been rendered against the company for $17,000! I would like to have the officers of the company give an account of their stewardship. Perhaps they are honest and have conducted the affairs of the company properly, but as I am a stockholder, and in the dark, I call for a truthful statement. Let them show in your paper how the money has been disbursed.

A STOCKHOLDER.

We cheerfully give place to the above communication from a "stockholder" in the "Coso" mine. The information he desires should be given, promptly and in full. We have no personal knowledge of the amount of money which has been called for by this company, but presume our correspondent is correct. The amount which he names $43,200, would be just $12 per share. It is right and proper, without supposing that any part of this money has been improperly applied, that our correspondent, or any other stockholder in that mine should be informed as to the manner in which this large amount of money has been expended. The columns of this paper are at the service of the officers of the company free of charge, if they will give a statement of the affairs and condition of the corporation to their stockholders and the public. Since the recent extraordinary *expose* of the affairs of the Grass Valley company, by which the stockholders of that concern have been assessed to the amount of unknown thousands, for the benefit of private parties, or at least for no proportionate benefit to the mine, holders of mining stock generally have begun to discuss the affairs of the various companies in which they are interested, fearful that in other cases, also, figures may be made to mean other than that which they seem to read. People are casting about to see if some plan cannot be devised, by which, from time to time, stockholders may be advised of the manner in which the money that is drawn from them in the way of assessments, is being expended. In order to meet this sudden and urgent want, and to encourage the initiation of a practice which, more than almost any other, will put an effectual check upon a criminal or reckless expenditure of money by dishonest or incompetent mine managers, we hereby tender, for the time, the free use of the MINING AND SCIENTIFIC PRESS for such a purpose. This paper has now a wide and general circulation, both in this city and throughout the mines, and will be found a most convenient and appropriate medium for the communication of the information so earnestly called for at the present time. There is no law to compel the publication of such information, but such a course is both wise and proper. Let any one company set the example and others will follow; many freely, and eventually, under the pressure of circumstances, all which can make an honest showing. Those who cannot or will not allow the public to know what has been done with the money which has been collected from stockholders, should be set down as swindling institutions or, at least, as corporations from which all confidence should be withdrawn.

That money has been and is still being squandered with a recklessness, which scarcely has a parallel, is a matter of notorious fact. It is high time some decided steps were taken to put a stop to extravagant and unnecessary as well as dishonest expenditure of money collected in the way of mining assessments. No time better than the present for a general call for an account of stewardship. Mistakes may have been made—honestly made; considerate men will overlook them. But let woe betide the dishonest, swindling managers who have grown rich, or put money in their pockets at the expense of duped stockholders, who have paid their assessments with the expectation of an honest expenditure of the money so collected. Let the big companies be called to account as well as the little ones. Let it be demanded why the Gould & Curry suddenly fell off from $150 to $50 per foot, in its monthly dividends. Why is it that such reports as were given in the last *Weekly Stock Circular*, are freely circulated in the community without any attempt at explanation. There is good reason for believing that material facts relative to the actual condition of this mine are suppressed, from the fact that stockholders have been denied the privilege of personally examining the developments now in progress at the mine. For whose benefit are the damaging reports with regard to this mine allowed to go abroad? Are they founded on fact or are they not? A plain and honest answer to this last question can be easily given by the managers of the Gould & Curry mine if they choose. That answer would be worth hundreds of thousands of dollars to ontside stockholders who are now kept in ignorance with regard to the value and condition of their property, while the managers, who have the inside track, know exactly what to do, when and how to sell, and when and how to buy. Such reticence on the part of the management of that mine may be strictly within the bounds of law; but is it honest?

Take our progressive Companies. The Hale & Norcross officers perhaps decide to levy an assessment of $20,000 to-day, next month they levy $20,000 more, and perhaps $10,000 the next, and so on for one or perhaps three years. What becomes of this money? The directors may be honest and apply the entire amount judiciously and honestly. But why not let the stockholders know how and for what they expend the money? Explain why so much money is called for and no bullion returned out of which dividends may be declared. Perhaps if a fair and full statement were made the stock would go up instead of down—at any rate buyers and sellers could see more clearly how to act, and buying and selling the stock would partake less of the nature of gambling. Again let us take the Challar. Forty dollars a foot assessment, twenty dollars, sixty dollars; and so on until the amount has run up to $320 in all. Four hundred and forty-eight thousand dollars is a large amount to draw out of the stockholders of one mine before the first dollar is returned in the way of a dividend. It may be all right, perhaps, having that $50,000, more or less, for a house for the superintendent of a non-dividend but high salary-paying mine, to live in. So we might go on with numerous other, both big and little companies. What has become of all the millions of money that has been thus expended. A bare moiety, only, has been accounted for by those through whose hands it has passed, except perhaps, on the books of the company, which are seldom ever looked at by any but the secretaries and directors. Nobody else, of course, has time, and few the capacity to take a set of books and learn therefrom, without the aid of a balance sheet, where or how the money has gone. Now why not have all this information placed before the public, at frequent intervals? It can do no possible harm, and cannot fail to do much good. Its cost would be little or nothing; and absolutely of no account compared to the advantages which would be derived therefrom, even if the company were obliged to pay a good round price for spreading such information before their stockholders. A few companies have set an honorable and praiseworthy example in this particular. Why not make the neglect to do so the exception instead of the rule? Such a proceeding would make some terrible disclosures no doubt, but even the sick ones would be benefited, while the rotten, swindling, wildcats would be exterminated. Why not bring public opinion to bear upon the matter with a force which will compel such a course? It is the only course we can see for bringing our great mining interest out of the slough in which it is now struggling, and placing it upon a firm foundation. It is the only condition under which people will any longer consent to pay assessments in mining enterprises outside of their own personal control.

THE PAVILION AND FAIR.

The carpenter work upon the main portion of the Pavilion is nearly completed. The interior looks "grandly spacious." The nakedness of the walls and beams is being relieved by festoons, wreaths and dresses of evergreens. A large steam boiler is being set up on the outside of the building to generate steam for the propulsion of such machinery as may be placed on exhibition for working purposes. A new and extensive wing is being added to the west end of the main building, and is in a forward state of completion. This addition has been rendered absolutely necessary to accommodate the great demand for exhibition room which is constantly crowding upon the Executive Committee. The Pavilion will undoubtedly be filled to its utmost extent.

Mr. Porter, the Agent for the Fair, requests us to urge upon such as intend to bring articles for exhibition, to apply at the Mechanics' Institute, on California street, above Montgomery, as soon as possible, and enter their names, as there is not much time left, now, and it is necessary for him to begin very soon to apportion the departments in the Fair building and allot to each exhibitor the position in it which he is to occupy. This allotment will begin on Monday or Tuesday next. There are many who have been talking about exhibiting and intend to do so, but who, by a little longer delay may lose the opportunity of securing such space as they may desire. It is for the benefit of such in particular, and all others as well, that this especial notice is made. It should be recollected that Mr. Porter, after the present week, will have a vast amount of intricate business on his hands, and cannot possibly devote that attention to late comers, which would be desirable.

We would, in this connection, remind our interior exchanges of the propriety of calling the especial attention of their readers to the early opening of the Fair. The low rate of traveling on the Sacramento river, the grand entertainments that will be presented at the Mechanics' and Christian Commission Fairs, the wonderful mechanical curiosity in the shape of the huge iron Monitor which is fast drawing to a completion at the foot of Third street, and the numerous other attractions of our city, which offer great inducements to our friends in the interior to embrace the present opportunity to make a visit to the "Bay." The Grand Exhibition of the Mechanics' Fair will commence on Tuesday, the 30th inst. Access to the Pavilion is especially easy, as the horse cars from Kearny and Front streets pass directly by the Pavilion every five minutes, affording conveyance to visitors from four different extremes of the city.

FINE COPPER ORE.—Our attention was yesterday called to some fine copper ore—a lot of about two tons—which has just been received from a newly opened mine, known as the "Rising Sun," located on Moccasin Creek, Tuolumne county, about sixteen miles south from Copperopolis. The mine has only been opened by a tunnel, 70 feet in length, connected with a shaft which has been sunk on the vein 54 feet. The ore which we saw was all taken out in sinking the shaft, no drifting having yet been attempted. It is of a very superior quality of sulphurets, accompanied with black oxyd, occasionally showing the peacock color. The vein is from eighteen inches to two feet in width, the ore perfectly concentrated, without any appearance whatever of rock or muudic. The company is not incorporated, and is in the hands of only three parties—Daniel Munn and John Ford, residents at the mine, and Messrs. Hunter, Waad & Co., 612 Front street in this city. The ore can be taken out and delivered here for about $20 per ton. The entire mass as it is coming from the mine at present will assay over 30 per cent. The claim is 3,000 feet in extent, with croppings traceable for 1,200 feet on the surface. The proprietors certainly have a most promising thing They have no stock for sale.

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It is a sterling periodical, and deserves encouragement.—*Territorial Enterprise.*

IMPROVMENTS IN MINING.

Improvements in mining are often announced which, on examination, are found to be improvments in metallurgy—methods of reducing rather than of extracting ores. In California and Nevada, great and constant efforts are being made to work ores more cheaply or more profitably, while very little attention seems now to be given to diminishing the cost of mining. This labor seems to be regarded as inevitable, although it constitutes the major part of the cost of most metals

In "placer mining," great improvements have been made. The pan has given place to the rocker, the long-tom and the sluices; and then the hydraulic system was introduced. The change was all in one direction, viz: the substitution of water power for hand power. The greater efficiency of the methods thus introduced, is so far compensated for the exhaustion of our gold fields, that wages have remained almost unchanged in our mines for many years past. No similar improvement in underground mining have as yet been made in this State. And yet, it is by no means impossible that they *may* be made. It is certain that in no other country would their adoption be so profitable. A reduction in labor that would be regarded as trifling in Europe, would here pay for costly materials or machinery. Blasting constitutes a very large share of the underground work of the world. Europeans are actually engaged in improvements in this direction. We have given some report of their progress in another column, under the head of "Gun Cotton in mining."

The Sooke Mines—Trap Dykes.

EDITORS MINING PRESS:—The trap dykes and metamorphic rocks of the Pacific coast are entitled to consideration, as some of them are found to be metalliferous. They are more recent than the coal formation. The gold found at Sooke is near one of these dykes, which is the largest basalt dyke I have seen on the coast. It runs across the entrance of the straits of Fucca, from the American side, where some gold has been found; but not in sufficient quantity to pay for mining. All new places must have their excitement, and I think that the excitement with regard to Sooke will be short. There are mines of lead and copper on Vancouver's Island, which are more inviting than these gold mines. In Bellingham bay there is gold overlaying the coal. The quartz boulders noticed there I think are drift. There is a large coal field underlying Puget Sound, and running north to the Russian possessions, also some very large veins of lignite fifty feet thick. There are coal veins (bituminous) twenty feet thick.

Mount Diablo is another instance of the value of our trap dykes and metamorphic rocks. In fact the Coast Range seems to be nearly all more recent than the coal formation, and may be classed as a large "fault," to use a coal miners term. Wherever there is any considerable extent of country that is not broken by one of these upheavals, there coal will be found. In some places it has been "thrown" for the space of one half mile. But this subject is too important for my present time. We have scientific men on this coast. Is the subject not worthy their attention. Yours

CLAYTON.

A NEW IDEA—The Sacramento *Bee* says it has been suggested by a citizen of much practical experience, that in lieu of the present dredging machine used by the Navigation Company in stirring up the the deposit in the Sacramento channel, that a fire engine with proper length of hose and nozzle would throw on a stream of water with sufficient force to sluice out the channel to any required depth. This was the course pursued in removing the tough clay bed under the Aquilla, and it was crowned with perfect success? Why not try it?

TREASURY AND MERCHANDISE FROM MEXICO.—The John L. Stephens, which arrived on Thursday, brought from Mexican coast ports $208,985 in treasure; also, four hundred and fifty-two bags ore, forty-three bales cotton, and five bales cotton seed.

Among the ore by this arrival was 6000 lbs. of choice ore from the La Faverita. Ore from this mine will be shipped regularly, in future.

Mobile and Its Defences.

The recent announcement of the complete success of the Federal fleet in passing the defences of Mobile harbor, capturing two and investing the third of the three most powerful of the principal forts, gives particular interest to the following item relating to the defences of that harbor. The information given was furnished to the N. Y. *News*, by a French subject, who has been for a long time a dry goods merchant of Charleston, and who has recently found his way out of the Confederacy. In giving a somewhat extended notice of the general defences of the Southern Coast he described as follows those of Mobile harbor:—

The great Southern stronghold and port of Mobile, he found in the most complete condition of defense, declaring it to be superior in that respect to the fortified harbors of his own country, Toulon, Brest and Cherbourg. The rebels there have a continuous girdle of forts and works linked together, and line within line, commanding all conceivable points of access for a circuit of fully fifteen miles. In the forts commanding the outer approaches he saw and counted no less than fifty gigantic pieces or ordinance, after the latest and most approved English and French patterns, some of them throwing steel bolts of 150 lb., which their officers declared would go through any iron-side or monitor in the world, "as a bullet would go through a cheese." Aiding these defences were obstructions, torpedoes, and floating batteries at every available point, and to sustain them all, four huge iron-clads with a thickness within and without of eight inches of metal, fully manned and equipped with rifled ordinance, throwing explosive steel bolts. Our informant saw no less than eight other iron-clads and swift gunboats in progress of construction and nearly completed, and when he was in Mobile, although the garrison at that place was not 15,000 men in all, they derided the efforts of Farragut and Sherman, and boasted long and loudly of the part their fleet would play, ere the summer shall have passed, in the destruction of our blockaders and the recapture of New Orleans.

IMPERIAL DIVIDEND.—The Imperial Silver Mining Company of Gold Hill, says the *News*, have declared a dividend of six dollars per share, or one hundred and twenty dollars per foot, leaving a large sinking fund on hand. This company have been opening their mine for some time so as to get at the large body of pay ore, in quantity, and now can pay a regular monthly dividend to its shareholders. One by one the Gold Hill mines are falling into the line, and petering out monthly dividends, that will aid in restoring the confidence temporarily lost in good mines.

NOT VERY COMPLIMENTARY.—The famous English firm of Laird & Co., of Liverpool, were recently the subject of some remarks in the House of Lords, which were not particularly complimentary. The remarks were made by no less a personage than Earl Russel who said distinctly that this celebrated ship building firm were not to be believed when they give evidence, no matter how loudly they protest. The noble Earl says they are not so innocent of illegal transactions of the sort now charged to them, as to be credible witnesses, and accepting their testimony as truthful, would have been to open the road direct to a war with the United States. Quoting verbatim, his most emphatic words are: "They, (the Lairds) have done everything in their power, by fitting out ships, by engaging in contracts for supplying vessels of war to the other belligerent, to give the United States a just cause of war against this country."

THE San Fraacisco and San Jose Railroad is said to be paying $26,000 per month over running expenses. If so why is it that the stockholders are not getting dividends?

ON Reese River there are twenty-five hot springs, from milk warm to boiling hot, and they measure from ten to one hundred feet in diameter, and from one hundred to one hundred and eighty feet in depth.

The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also—ENS. PRESS.

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 56 & 57 Government House, Corner of Washington and Sansome streets, San Francisco.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

"Daily Mechanics' Reporter."

— OF THE —

INDUSTRIAL FAIR.

A FREE DISTRIBUTION AND IMMENSE CIRCULATION!

DEWEY & CO., Publishers.

THE PROPRIETORS OF THE MINING AND SCIENTIFIC PRESS, having been granted the publication of the above daily, at the MECHANICS' INDUSTRIAL FAIR PAVILION, will print the *largest and most extensively circulated* "Fair Paper" yet issued in this State. Every lady, gentleman and child visiting the Pavilion will be supplied with copies for themselves and absent friends as the sheets are issued from the press. It will prove a valuable record and illustration of the Grand Industrial Exhibition of 1864; its columns will reflect every event and incident of general interest transpiring each day during the Fair, and many copies will be preserved and bound by exhibitors and others. Inventors and Patentees having articles deserving of illustration, should make arrangements to have their engravings prepared at once.

☞ A limited number of advertisements will be received for insertion in the REPORTER, thereby presenting a rare and valuable opportunity to advertisers.

Application should be made early to

DEWEY & CO.,
Publishers and Patent Agents,
Office of the Mining and Scientific Press, Nos. 14, 56 and 57 Government House, Corner Washington and Sansome Sts.

MINING ACCIDENTS.—A rock weighing fifty pounds fell down the shaft of the Central Hawkeye claim, in Virginia, on Friday of last week, striking one Thomas Bean on the head and nearly killing him.

TO BE REFITTED.—Capt. Sayward who purchased the famous ship *Aquila*, is about refitting her. She is to proceed to Mare Island to be docked. It is said that she is to be made as "good as new," and is to go into the lumber trade.

SOMETHING WORTHY TO BOAST OF.—The Mormons boast that there are one hundred thousand people in Utah, and yet in all their settlements there is not to be found a drinking saloon, a billiard-saloon or bowling-alley.

TWO NATIONAL ACADEMIES.—On the 30th of June Senator Sumner introduced a bill for incorporating a National Academy of Literature and Art, and a National Academy of Moral and Political Sciences. The bill was read twice and ordered printed.

LOW WATER.—The streams every where are getting extremely low. The Carson river is so low that the mills that obtain their water from it have been compelled to suspend half their stamps, while a great many have stopped altogether.

THERE is a tax of five per cent. laid on the re-setting of diamonds. For simply changing the form of diamonds, worth five thousand dollars, the snug sum of two hundred and fifty dollars accrues to the Government, whereas if the owner wear them in their old settings they escape the collector.

PETROLEUM IN BRITISH COLUMBIA.—It is reported that several acres of ground have been discovered near Lillooet, in British Columbia, covered with black bituminous substance supposed by the finders to be petroleum, or coal oil croppings, as they call it. By others it is thought to be the ordinary asphaltum. A quantity has been sent to the Government house for analysis.

DROUTH EVERYWHERE.—California is not the only land suffering from the drouth. The New York Tribune of the 16th ult., says that the damage to farmers from the prevailing drouth can never be estimated in dollars and cents. It would go largely up among the millions, if it could be calculated. It prevails over a wide extent of country, reaching from Maine to Minnesota.

THE Stockton *Independent* suggests there should be a room, securely fastened, fitted up on the California Steam Navigation Company's boats, for the conveyance of lunatics to that city, so that they could be kept secure from contact with the other passengers.

ELECTRICITY APPLIED TO FISHING.—An exchange of the London *Field*, states that for some days past a stranger from Paris has been making experiments with electric light in fishing, off the English coast. The fish, attracted by the light, come in shoals to the surface of the water, where they are taken without any difficulty with the net. The steamer Ranier, of the coast guard service, has been placed under the direction of the stranger, to continue his experiments.

WHAT WE WANT TO MAKE TIMES GOOD.—The Esmeralda *Union* very correctly says that what is wanted to make times good over the mountains is, chief of all, that all litigation should cease and that companies at law may not be compelled to suspend work on rich ledges. The probability of the early approach of such a desirable event may be inferred from the information contained in the following item, which we clip from a late number of the Gold Hill *News*:—

We are told by Mr. Clagett, a lawyer of Virginia, that there are upwards of one thousand cases upon the calendar of the District Court of Storey county, awaiting adjudication. Judge North has left the Territory for his health, and under these circumstances—there have been but three civil cases disposed of since January—will anybody figure up and inform the public when the calendar will be cleared, when litigants will know what their rights and property are? The "issue" is, indeed, afar off, if the people submit quietly to be hamboozled with a Judge, who either will not, or, for reasons best known to himself, cannot hold Court; is there any wonder that there is a financial crisis upon the people, the end whereof seems to be in the far-off future.

OTIS V. SAWYER,

DECLIVITY OF RIVERS.—A very slight declivity suffices to give the running motion to water. Three inches per mile, in a smooth, straight channel, gives a velocity of about three miles an hour. The Ganges, which gathers the waters of the Himalaya mountains, the highest in the world, is only about 890 feet above the level of the sea, at the distance of 1,600 miles from its mouth, and to fall these 800 feet in its long course, the water requires more than a month.

The great river Majdalena, in South America, running for 1,000 miles between two ridges of the Andes, falls only 500 feet in all that distance! Above the commencement of the 1,000 miles, it is seen descending in rapids and cataracts from the mountains.

The gigantic Rio de la Plata has so gentle a descent to the ocean, that in Paraguay, 1,600 miles from its mouth, large ships are seen which have sailed against the current all the way by the force of the wind alone; that is to say, which on the beautifully inclined plane of the stream, have been gradually lifted by the soft south sea breezes, and even against the current, to an elevation greater than that of our loftiest spires.

FANNY FERN thus beautifully expresses the feelings of utter loneliness and desolation—the "strong yearning and passionate pain," of those who are written homeless: "We sometimes think it is only the homeless who can understand in its full meaning, the word 'Home.' Think what it must mean to those whose desolate hearts no smile cheers; who pass daily thousands of their fellow creatures intent on their errands of business or pleasure, to whom their life or death is a matter of no moment; who look into the pleasant windows as they pass, and see the well-filled table, while they hunger and thirst, but often more eagerly for companionship than food. Then think what it must mean when sickness and death shall come, and life ebbs slowly away, and the ear aches listening vainly for a friendly footfall, and the soul faints with longing for a kindly pressure of a loving hand, as the dark valley appears in sight. Ah! well for such when this poor life is over, and the brightness of another existence dawns upon the soul."

PEACE PROSPECTS.—The Washington editorial correspondent of an evening cotemporary appears to think that the acquisition of peace at an early day, and on the basis of honorable negociation, which will be acceptable to both North and South, is not at all an improbable event. Mr. Greely, of the *N. Y. Tribune*, also appears to share in the same opinion. In a late editorial referring to the part he acted in the recent attempt at negociation at Niagara, Mr. Greely intimates that he is in possession of more information in relation to the prospects of peace than he is at liberty to communicate, and closes his editorial with the following significant words:—"All that I can now add is my general inference that the pacification of our country is neither so difficult nor so distaut as seems to be generally supposed."

ANOTHER experiment in Artesian well boring is to be made in Los Angeles county by Phineas Banning. Hitherto such experiments have failed in that region.

THE LADIES' CHRISTIAN COMMISSION FAIR for the sick and wounded soldiers will commence at Union Hall on the 24th inst. We understand that the arrangements for this Fair have been made on the most extensive scale, and that it is confidently expected that the success of the undertaking will be proportionately great. The object is one which should commend it to the best wishes and active co-operation of every individual in the community.

A GREAT INDUSTRIAL FAIR!
—TO BE—
Opened in San Francisco,
—ON THE—
30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill. The successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked separately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

19-tf

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs, Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOWLEY
Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

NEW VOLUME.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "SLIGHT COLD" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. "*Brown's Bronchial Troches*" give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in pocket and taken as occasion requires.* Agents for California
I-1m REDINGTON & Co., San Francisco.

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.
14t- W. A. H. TOWN, Secretary.

Cuatlon.—Libertad Gold and Silver Mining Company, District of Ures, Sonora, Mexico.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First st., between Howard and Folsom streets,
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz Mill Machinery Mining Pumps, Amalgamators, Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.
*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.
All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.
tf. HOWLAND, ANGEL & KING.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Pacific Powder Mill Company, Marin Co., California.

NOTICE.—A special meeting of the Stockholders of the above Company, will be held at the Office, No. 708 Montgomery Street, San Francisco, on Saturday, the 20th day of August, 1864. at 7 P. M., for the purpose of amending the By-Laws. By order of the Trustees.

4-4t A. H. MEYERPETER, Secretary.

READY ROOFING

READY TO NAIL DOWN.

READY ROOFING

At loss than half the cost of tin roofs.

READY ROOFING

Moro durable than Tin.

READY ROOFING

Suitable for steep or flat roofs.

READY ROOFING

For all kinds of buildiags, in all climates.

READY ROOFING

Easily, cheaply, and quickly put on. Needs ne coating over with cement after it is nailed dowu.

READY ROOFING

Made of a strong woven fabric, thoroughly saturated and covered upon both surfaces with a perfectly water-proof composition, and put up in rolls ready for use—40 inch wide, and 75 feet long.

WE ALSO MANUFACTURE
Liquid Cement,
FOR LEAKY TIN ROOFS.

Much cheaper and more durable than oil paint. Also,

Compound Cement,
For Leaky Shingle Roofs,
Which will often save the cost of a new roof.

Samples of Ready Roofing and Circulars sent by mail when desired. Favorable terms made with responsible parties who buy to sell again.

READY ROOFING CO.,
6-tf 73 Maiden Lane, N. Y.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJU-TING WRINGer. No wood-work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $6.50. No. 1, $7.50. No. F. $8.50. No. A. $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,

No 13 Platt Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb-Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the be t Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST Putnam's Wringer. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co:—

GENTLEMEN. I know from practical experience that iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use. Respectfully yours,

JNO. W. WHEELER. Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.

New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.

6-tf

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultation and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of conscientious models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are objected to because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide: it will, however, generally inform the applicant whether a improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $15 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency or expense ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as rapidly as possible. When the drawings are ready we send them to the inveator by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 y'rs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and grounds covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

HUNT'S IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center af the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aglast purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Warks, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory, among which may be named the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Pinton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose far which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed far separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted ta refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to HUNGERFORD & PRATER, Proprietors.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

And in accordance with law, and an order of the Board of Trustees, made on the 25th day of June, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on the 22d day of August, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

R. K. ALLEN, Secretary.

Office, No. 16 Metropolitan Block. 6-3t

Important to Californians.—Many inventors lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are done the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

New This Week.

Heidelberg Gold, Silver & Copper Mining Company, Tomales Pais District, Marin County, Cal.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 13th day of July, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
R Merriman	58 59 60 215	160	10 00

Herrman Kutscher	232 233 234 235	200	20 00

And in accordance with law and an order of the Board of Trustees, made on the 13th day of July, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the Secretary, No. 522 Montgomery street, on Monday the 5th day of September, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent Assessment thereon, together with costs of advertising and expenses of the sale. B. ROTHSCHILD, Secretary.

Office, 522 Montgomery street.

San Francisco, August 20, 1864. 8

Henry and Barnard Consolidated Gold, Silver and Copper Mining Company, Weaver District, Arizona Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of July, 1864, an assessment of ten (10) cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States Gold Coin, to the Secretary.

Any Stock upon which said assessment shall remain unpaid on the 20th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday the 5th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. I. M. BLOOD, President.

GEO. W. GILDERSLEEVE, Secretary.

Office, 607 Market street, San Francisco. 4

POSTPONEMENT.—The advertisement of delinquent stock on the above assessment, is postponed until August 27th, 1864, and the sale thereof is postponed until September 12th, 1864. By order of the Board of Trustees.

8 GEO. W. GILDERSLEEVE, Secretary.

La Traviata Gold and Silver Mining Company, Calaveras County, California.

NOTICE.—There are delinquent, upon the following described stock on account of assessment levied on the 12th day of June, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
L Reupsch	13 14	17	$8 50

R Cisar	95	13	0 75
Mrs White	105	5	2 50
J Mihielle	93	30	15 00

And in accordance with law and an order of the Board of Trustees, made on the 13th day of August, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, on the 21st day of September, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

AUG. KUNAST, Secretary.

Office, 540 Washington street, San Francisco. 8-1

Salamander Gold and Silver Mining Company, Mill Valley District, Calaveras County, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of ten cents per share was levied upon the assessable capital stock of said Company, one-half payable on the 16th day of August, 1864, in United States coin, to the Secretary of said company, and the balance payable in thirty days from said 16th day of August.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 4th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

F. D. GALLAGHER, Secretary.

Office, No. 35 Metropolitan Block. 8-4t

San Francisco Moss Lodge Company, San Francisco District, A. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 16th day of August, 1864, in United States Coin, to the Secretary, at his office, No. 618 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 28th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

ROBT. T. POLK, Secretary.

Office, No. 618 Merchant street. 8-4t

Caution.—The public are hereby cautioned against negotiating for the following described Certificates of Stock of the Imperial Gold and Silver Mining Company, as the same were sold for delinquent assessments, on the 12th day of August, 1864, and will not be transferred on the books of the company:

Nos. 6, 10, 11, 12, 13, 14, 33, 34, 35, 47, 48, 65, 67, 68, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 86, 87, 88, 89, 90 95, 96, 107, 108, 17, 18, 19, 20, 21, 22, 52 53, 54, 55, 56, 57, 63, 30, 32, 123.

L. B. WOOSTER, Secretary.

Office, No. 410 Montgomery street. 7-2t

Pena Silver Mining Company, Location of Mine, Triunfo District, Lower California.

NOTICE.—There are delinquent upon the following described stock on account of assessment levied on the 21st day of July, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,
An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,
And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE IN Government House, Nos. 55 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

NEW YORK AND PHILADELPHIA

ORNAMENTAL IRON WORKS.

THE SUBSCRIBERS HAVING FORMED A CONNECTION with Messrs. WOOD & PEROT, of Philadelphia, under the above title, are prepared to furnish every description of

ORNAMENTAL IRON WORK,

Cast, Wrought and Wire Railings, for enclosing

CEMETERY LOTS, DWELLINGS, PUBLIC SQUARES, &c

Verendahs, Circular & Straight Stairs, Doors, Window Guards, Stable Fixtures, Fountains, Vases, &c.,

Also, having purchased of the late firm of Hutchinson & Wickersham, Canal street, their entire stock of

BEDSTEADS, CRADLES, FURNITURE, &c.,

They now offer to the public, at their New Warehouse, the most extensive stock of Ornamental Iron Goods to be found in the United States. They have also purchased of the NEW YORK WIRE RAILING Co., the patent right and machinery for making

Wire Railing, Farm Fence, Window Guards,

GRATING, COAL SCREENS, &c.,

And will continue the *Exclusive Manufacture* of the same at their Works.

CHASE & CO.,

(Opposite St. Nicholas Hotel,) 524 Broadway, New York.

Orders may be sent through the AMERICAN ADVERTISING AGENCY, 389 Broadway, New York. 6

ENLARGEMENT.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

MECHANICS' INSTITUTE.

INDUSTRIAL EXHIBITION, '64.

NOTICE TO EXHIBITORS,

THE EXECUTIVE COMMITTEE WILL BE PREPARED at the Pavilion, on Union Square, to receive Goods intended for Exhibition on the Twenty-Second of August, and none will be admitted after the 31st of August.

By order of the Committee.

C. B. PORTER.

N. B.—Newspapers publishing previous notices for the Fair will please discontinue them and insert the above instead. 7v9td

BOOKKEEPING.

YOUNG MEN CAN ACQUIRE A COMPLETE BUSINESS Education by taking a course of Bookkeeping and Commercial Calculations at the Counting rooms of PROF. LUTY, 305 Montgomery Street. The course of study prescribed for his students is more extensive and thorough than any other in the city. Penmanship taught on the Spencerian system. Charges reasonable. 7-2m

LEANDER RANSOM,

Civil Engineer and Surveyor,

Having been connected with the public works of the State of Ohio for 20 years, and the public surveys of the State of California for 7 years. Also STATE LOCATING AGENT, and as such having the sale of

600,000 Acres of State School Lands,

At the low price of $1.25 per Acre. Terms; Twenty per cent in cash and the balance on a credit of several years.

7v9-tf Office, 328 Montgomery street.

IMPORTANT DISCOVERY

— IN THE —

Photographic Art.

Jacob Shew's

CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.

[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

6-tf 315 Montgomery street, near Pine.

Lloyd's New Amalgamator Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 6 0 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15¾ ozs., Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 75

The assay being made by Messrs. Molitor & Co.

From 2 pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Hewston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $75 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 54.2 per ton; and over the works at the mill, $62 64.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $1.19, Silver, $1.52, amounting to $2.71-100—equal to $361.33-100 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. C. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2.6.13-10. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewstou & Co., yielded $7.58-00—equal to $111.60 to the ton. Difference in favor of Lloyd being $114.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kustell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

SCIENTIFIC AND MINING JOURNAL.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

VOLUME IX. Number 9.

THE INDUSTRIAL FAIR.

Tho work nf preparation for the Industrial Fair goes bravely on. Mr. Porter is at his post in the Pavilion, prepared to receive such articles as are intended for exhibition. Tho allotments of space npon the floor have been pretty generally made. Carpenters, machinists and others aro constantly busy puttiug up and arranging the heavy articles for exhibition. The eogines to furnish the motive power are olready set. Several cumbersome agricultnral implements, pumps, amalgamators, etc., are in the hoilding, nnd busy hands all around riog out the notes of preparation, that afford uomistakeable evidencs of the early approach of the opsning of the grond exhibition. The entirs length of the Pavilion is 375 fect, by 220 feet in breadth. The total arca covered is 55,000 square feet, snrmounted by a magnificent dome, the largest in iuterior diameter on the continent, and reaching to a height of 108 feet. Directly beneath this domo stonds a pyramidal framo work tower, or eircular flower stand, forty feet in hcight. This staud will be clad with benutiful flowers, and arouud it, on every side, fonntains of pure water will continually play. This will constitute, by far, the grandest floral display ever witnessed in California. The bnilding will bc lighted by 1000 gas burners, fed by nne and a quarter miles of pipe. There are four gas mains, about 800 feet in all, of 2½ inches in diamcter.

A large space has been set aside for the picture gallery, which has been divided into four halls, 100 feet by 25, each of which will be lighted by 50 gas burners in the evening. The light by day is most judiciously arrnnged, and cannot fail to fall npon the paintings with the best possible effeet. The entire wall room of the gallery comprises about 8,000 square fect. The picture gallery will form one of the chief features of the exhibition. Two of the departments will be devoted exclusively to oil paintings executed in California. Our resident artists have entered earnestly into the work, and are determined, that their portion of the exhibition shall be a credit, not only tn themselves, but to the State at large.

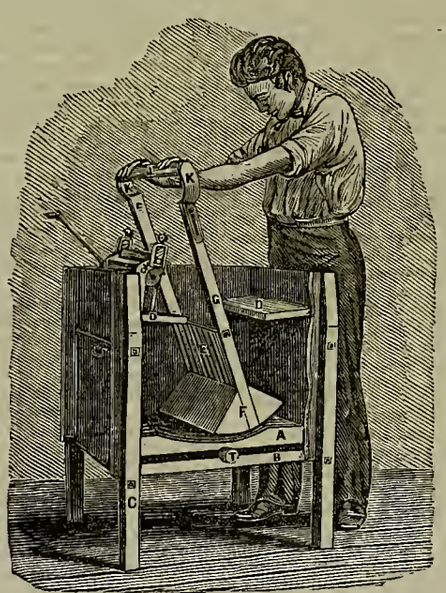
A refreshment room 50 hy 25 fect, exclusive of kitchen, has been put up, which will be fonnd a great convenience to visitors, to say nothing of the addition it will make to the receipts of the Institute. Of eourse there is no need that we should again assure onr readers that the exhibition is bound to be a great success. Everybody admits it. The city is already beginning to fill up with strangers, from the interior, and we shall expect to see them coming in next week, by thousands. Too great praise cannot be awarded to the managers who have eonducted the preparations for this exhibition, and to the Institute, as a body, who have devoted so much time and labor in preparing this grand entertainmont for the California public.

A new post offiee has been established at Roseville, Placer county, at the intersection of the Paeific and the California and Central Railroads—James Rice, postmaster.

GOLDEN STATE WASHING MACHINE.

This machine is ths invention of A. Badlam, Ssnior, of Saeramento, and is one of undoubted merit. The preliminary steps for obtaining letters patent for the same, have bsen made through the ogeney conneeted with this offiee.

The accompanying ent represents a sectional view, one side of the machins being takeo out to show ths interior, with a boy in the aet of working it. F is the dosher which strikes the two rolls of elothes; ooe on each side, thns keeping them revolving at eaeh stroke; A is a set of slats or bars 2½ inches in width by an ineh io thiekness, and are set edgewise about ⅜ of an ioch apnrt aud curved to with-



in four or five inches of their ends to correspond to the vibrations of the dasher. Beneath the slats and above B, the bottom of the box, is a water chamber one inch deep. Through this space the water rushes without interruption and from it passes up and down through the spaces bstween the slats and into the clothes, while the dasher is in motiou; after which this ehamber becomes the receptacle of the dirt as it settles away from the elothes, leaving them resting ou the edges of the slats for wringing. E is a set of pins placed in a row on the top of the dasher to keep tho rolls of clothes apart. T is tho handle whieh on being held revolves with the motion of the machinery in the two east-iron dogs, K K. The dogs have a slat and belt in them for the purpose of raising or lowering the handle, to inerease or lessen the power; serving also as weights to give force to the dasher. G is the brakes, 33 inches long; through tbese pnss a rod, 12 inchcs above tbe bottom of the dasher. The holes through which this fulcrum rod passes, are guarded by iron plates on botb sides of the box. D D are shelves, ssrving as dasb boards and preventing the water from splashing. C is the legs of the onachine; H is a wringer; T is the plug by which the dirty water is drawn off.

Persous who havo nsed this machine, pronounce it snperior to any in use. Already over one bundrod are in use in nud nbout Saeramento notwithstanding the short space of time it has been before the public. For cheapness, durability and effieacy, the patentce claims that there is no superior in the State.

Gun Cotton for Mining Purposes.

In our last number we gave an account of recent experiments with gun cotton, in Austria, showing its efficacy as a blasting agent. In this article we shall allude to the advantages of its use and manufacture. We quote from the chemical report upon Austrian gun eotton made to the Britisb Association by Dr. Gladstone:—

"Sincc tbe discovery of gun cotton by Schonbein, many experiments have been made with a view of introducing it to general use. Such serious difficulties, however, presented themselves, that the idea gradually eame to be abandoned everywhere but in Austria. Here, experimentation was kept up; and it having been reported on good authority that the experimenters had succeeded in overcoming many of the difficulties encountered elsewbere, the committee of tho Association applied to the Austrian Goverument for information on the snbject, whieh was furnished them. The following is a snmmary of the more important facts elicited:

In the first place, the gun cotton prepared by Baron Von Leuk, the inventor of the Austrian system, differs from the gun eotton generally made, in its eomplete conversion into an uniform ehemieal compound. It is well known to chemists that if cotton is treated with mixtures of strong sulphurie and nitric aeid, eompounds may be obtained varying considerably in composition, though they all eontain elements of tho nitric acid, and are all explosive."

The most complete combinatiou is formed by the Austrian chemists "triuntrocellulose," and consists of C_{12} H_7 $(3\,N\,O_4)$ O_{10}. This is of no uss whatever for the making of collodion, whereas ordinary cotton is ths sols source of collodion. It is, however, Von Leuk's gun cotton, ond he secures its production by sevsral precautions, of which tbe most important ars tbe cleansing and perfect drying of tho cotton before its immersion in the acids; the employment of the strongest acids obtaiuable in commercs; the steeping of the cotton in a fresh strong mixture of the acids, *after* its first immersion and consequent perfsct conversion into ordinary gun cotton; ond the continuance of this second steeping for 48 hours. It is then allowed to wash in a stream of pure water for sevsral weeks. The want of these prolonged processes seems to have been ths cause of the earlier failuros. Von Leuk's gun cottoo, thus prepared and freed from all trace of acid, is not liable to some of the objections urged against ordinary gun cotton. It has becn kept uninjured 15 years, although ordinary gun cotton is quite liable to spontaneons decomposition. It does not ignite until it is raised to 177° Fahrenheit; it absorbs moisture but slightly, and is entirely free from ash. The gases produced by its combustion are comparatively innocuous, thongh some varieties of *ordinary* gun eotton are said to have produced both nitrous fumes and prussic aeid.

It seems a disndvantage, as compared with gunpowder, that it explodes at so low a temperature as 277° Fahr. Yet ten years experience has proved that this temperature is sufficiently high to insurs safety of handling. It is an nrtificial temperature, and artificial temperatures aceidentally produced are generally high enough to ignite gunpowder. Its manufaeture and transportation is far safer than that of gunpowder. During the process of manufacture it is always immersed in liquid exeept during the final drying. At this stage of the operation it is placed in a rapidly revolving wheel or seive, and the water contained in it is driven out by eentrifugal force, It is then thrown out into the sun to dry. It can be stored under water, and dried in small quantities as it is wanted, for it is not injured by damp like gunpowder. Tbe main advantages of the Austrian gun cotton over gnnpowder are as follows:—

1. It is cheaper; not by the pound—but it costs less than an amount of gunpowder capable of doing the same work.

2. It is far more powerful—so that by using it, a smaller number or smaller size of drill holes are required to produce a given result tban wben gunpowder is employed.

3. It does not fill a mine or drilt with smoke aod tbus delay the miner until the smoke ean be expelled.

Its disadvantages are: 1st. That it is only prepared in a foreign country, and ean only be had by speeial importation.

2nd. It explodes at a much lower temperature than gunpowder and eonscquently require more care in handling—and especially in tamping in a drill hole.

In view of tho faet that its use in mining is constantly increasing in Austria, wbere it is known, is it not worth while for our practical miners to look into the subjset practically? A trial of it could in any event be but a trifling loss to any of the great mining companies at Virginia City or Gold Hill while its introduction might prove of incalculable value to them and to the whole mining region on this coast.

Correspondence.

[Written for the Mining and Scientific Press.]

Letter from Esmeralda---A trip to Bodie Mines.

Editors of Mining Press:—Perhaps it may be of interest to some of your readers to hear something late from the above named mines. In company with Mr. F. K. Bechtel, Mr. Daggett and Mr. Sanches, (who by the way is a banker here,) we all started in a coach and four for a ride of about eight miles, to see the celebrated Bodie mountain mines. After traveling about a mile and a half in a westerly direction we arrived in sight of the Real del Monte and Antelope quartz mills. As these fine works have before been fully described in your columns it will be sufficient now to say that these structures are model mills and a credit to the builders and owners, as well as to the section in which they are erected. They will compare favorably with any quartz mills in the Territory, and for durability, beauty of structure and cheapness of cost, will put to blush the famous Gould & Curry. They are built of brick and fire proof. After leaving these mills we traveled up a deep gorge, overhung with a rocky precipice, the hills surrounding which being covered with a dense growth of good fire wood make this a romantic and and delightful cañon through which to pass. In winding our way up this deep gulch we passed several fine quartz mills, pounding away as though the owners were determined upon setting something in circulation if it should be nothing more than the stamps, but I am credibly informed that the mills are all doing well, but on account of the scarcity of that most needful of all elements, water, they are unable to run only in the day time.

RAILROAD TO EAST WALKER RIVER.

Here allow me to state the only great objection I have found to this rich section is the searcity of water, and perhaps it would not be out of the way to say that this obstacle could be overcome by building a railroad from the mines to East Walker river, a distance of only about fourteen, miles where the best water sites for mills can be had. This is a feasible route and in my opinion will sooner or later be accomplished and the company that gets the road through will make it pay; for such lodes as are to be found in this section will not be allowed to lie dormant and useless on account of the want of conveyance of the rock to water. But to the subject of my trip.

THE BODIE MINES.

Well here we are in full view of the celebrated Bodie mountain. The first impression made upon my mind (and doubtless it is the same with all new comers) was that the mines would prove considerable of a humbug. The mountains which surround this rich district, the apparent scarcity of wood and water, and the idea that this was another exploded humbug which was being revived, I must confess had at this moment made a very bad impression on my mind, and I was almost ready to condemn the mines before I went any farther; but as I have learned by experience that it is better to be governed by practical examination than by the surroundings, I concluded not to express an opinion until I had examined both sides of the hill, the top, the bottom and the center, if it were possible.

THE SAN ANTONIO MINE.

While I was thus cogitating we arrived at the shaft of the San Antonio mine, owned and worked principally by Mr. Bechtel, of this place. The shaft is down about 130 feet. In descending into the mine, I was not able to see much of the formation, but on arriving at the bottom we found some twelve or fifteen hardy miners delving into the lode, which at this point is pitching slightly eastward. A "horse" is here thrown into the lode, which divides it, leaving the main ledge, where the men were at work, about three feet wide, and and fifty in length; but it is quite evident that when this claim is worked deeper, the numerous veins that are interspersed through the surrounding porphry, will come together and form a large lode or pay ledge. The quartz found in these lodes is principally gold bearing, and it is not therefore desirable that it should be so extensive or wide as is usual in silver bearing lodes. If I am rightly informed the assayed value of the bullion is about $12 per oz. and the rock assays between $50 and $75 per ton. Mr. Bechtel is having 100 tons of this rock hauled to a mill in the neighborhood to be crushed as a working test, from which he will doubtless receive a handsome return. I pounded out some of the rock in a hand mortar and the prospect was entirely beyond all I had expected, having got so fine a quantity of free gold out of it that I put it in a paper and brought it along with me as a proof of its great richness.

THE NEW MEXICO.

On leaving the San Antonio we next visited the New Mexico. The formation here is somewhat similar to that of the San Antonio, but giving more evidence of a water formation, being interspersed with a washed gravel. The quartz in the San Antonio claim is more crystalized, while the other is a decomposed quartz. Most of the quartz and also all the earth in and on this mountain appears very rich with gold, there having been placer mines worked here when water could be had, that paid well.

BODIE BLUFF CONSOLIDATED.

The next claim we visited is termed the Bodie Bluff Consolidated and is reported to have recently changed hands and been bought for a New York Company who intend erecting a quartz mill in the vicinity of the mine. The character of the rock is the same as that in the San Antonio. Work is suspended on this claim for a short time.

THE GEOGRAPHY OF THE COUNTRY.

Before I close I must give your numerous readers who have not yet visited this section some idea of the geographical position of Bodie mountain. Standing on the summit and looking south about twelve miles, the beautiful lake of Mono is distinctly seen, bounded on the west with a long range of the snow clad Sierra; to the east the White mountains are observed rising in their beauty, covered with a beautiful growth of timber. This most singular lake is fed from the melting snows and numerous springs flowing from the surrounding mountains. I suggested to Mr. Bechel that these streams and the lake would make good fishing ground, but was surprised when told that no fish are found in them. The water of the lake is alkalied and is filled with a sort of tad-pole which give feed for the numerous ducks and sea-gulls that abound there at this season of the year. The fact that this lake and its tributaries not containing any fish makes it the most singular body of water I have ever visited on the Pacific Coast. There are rocky islands in its center, that abound with guls, where quite a number of eggs are frequently gathered and brought to this market. They are said to be better and not so strong as those gathered outside of your Bay on the Faralones. The town of Mono lies directly south of this lake, where there are placer mines being worked to advantage. I have seen some of the dust. It is worth about $14 per oz. You will hear further from me after I have had time to visit other mines and localities.

A. Traveler.

Aurora, August 20, 1864.

What is My Country.—An old soldier, lately appealing to his son to go and fight for the government and Union, said: "Perhaps you have never thought what country means? It is all that surrounds you—all that has brought you up and fed you—all that you have loved. This country that you see—these houses these trees, those girls that go along there laughing—this is your country. The laws which protect you, the words you interchange with others, the joy and grief which come to you from the men and things among which you live—this is your country. The little room where you used to see your mother, the remembrance she has left you, the earth where she rests—this is your country. You see it, you breathe it everywhere. Think to yourself of your rights and duties, your affections and your wants, your past and your present blessings, write them all under a single name—that will be Your Country! We owe it to all that we are, and he who enjoys the advantage of having a free country and does not accept the burden of it, forfeits his honor, and is a bad citizen. Do for your country what you would for your father and mother."

Prices in India—It would appear from the following that a plethora of gold is about as bad in inflating prices as a plethora of paper. Late accounts inform us that prices are higher in India at the present time than they were a year ago by a hundred per cent. "The silver rupee, worth about fifty cents, will not buy as much as twenty-five cents in England. Articles of ladies dress there cost five times as much as they do at home. And yet India is draining Europe of specie and keeps it all.

[Written for the Mining and Scientific Press.]

Letter from Nevada City.

Editors of Mining Press:—The drought and distant mining excitements have done all the injury to this section of California that they are likely to do. Fruit and the trees, shrubbery and vines that have survived the water famine thus far will not be cut to perish late in the season. A large number of our people who have been lured away to Nevada Territory, Idaho, Colorado River, and other far-off places, by fabulous reports of mineral wealth, are returning in large numbers. Most of those who return confess that their efforts to develop silver mines with small capital have been a failure. Business in Nevada and Grass Valley is certainly improving. Not a decent dwelling in either of these places remains unoccupied for want of a tenant; while one year ago there were hundreds of houses and cabins "to let."

The uniform testimony of those who have returned from their laborious and fruitless toils in search of silver mines is, that wealth is more surely obtained here, in gold mining, than elsewhere in silver mining. And while they have faith that the undeveloped leads in Nevada Territory, for instance, are rich in silver, the great amount of capital required in their development, and the unpleasant features of a distant and barren country, are barriers that will require years of civilization to surmount. Here they are sure to find mineral wealth, if earnestly sought for, a fair recompense for their labor, and where, if they have not a home, they can make one and have it surrounded by those comforts and endearments that make life "worth living for." They come back with the determination to stay, and generally engage in quartz mining or prospecting, and already, we perceive, with good results to this all important branch of mining. The quartz mills here, with hardly an exception, are running and doing on the whole a safer, surer, and consequently a better business than ever before, and are producing more gold.

A new mill completed about four weeks ago on Diamond Creek, near Omega, I learn, cleaned up $14 to the ton during the past week. The Star mill near Eureka is now completed and was expected to commence operations to-day. Much interest is manifested in this city in regard to the success of this mill, as there are a large number of ledges in its vicinity, besides those owned by the Star company, that have every indication of being valuable, but their inaccessibility has hitherto prevented their being thoroughly prospected. The construction of the Star mill is likely to obviate this difficulty and open to miners an apparently rich mining region. Quartz mining is now being carried on with practical energy. Money is not squandered by individuals or companies in building expensive quartz mills and erecting a palatial residence for the superintendent or president to live in, before they have tested their claim, as they have in days gone by. Now, before they erect a quartz mill, they prospect their lead and ascertain the important fact whether it will pay or not. The hundreds of thousands of dollars thrown away here, years ago, in reckless and injudicious mining, has had the good effect to open the eyes and sharpen the judgment of quartz men, and has taught them that while the wealth of this country lies in gold-bearing quartz veins, the same can best be unlocked from its resting place by systematic, skillful mining. It is found to be much more economical to purchase machinery and sink one, two or three hundred feet on a ledge, proving its value in a measure, than it is to build a mill and then do the prospecting. Improvement in building mills and in the machinery used has kept pace with the times. For instance, a mill built seven or eight years ago near this city at an expense of nearly or quite $100,000 is not as valuable as one that could be erected now for one sixth that amount.

A new ledge was discovered, a few weeks since, near the old Butterfield mill, on Little Deer Creek, by N. M. Burnett, Sparks and two others. Forty-five tons were taken out and crushed yielding $1485, or $33 per ton.

I will here add that this city has been rebuilt so rapidly that traces of the great conflagration of last November can hardly be found, and the city can boast of better buildings than ever before. New buildings are still going up and we are all looking forward for the rainy season which will unlock the treasures of the hills and give us gold and water as a recompense for the effects of fire and drought which have borne heavily upon us during the past year. Our people deserve prosperity for their energy—for a season at least—and I trust they will get it.

Beaumont.

Nevada, August 20, 1864.

Copper Mines in Nevada.—The Nevada *Transcript* has the following favorable notice of the mineral resources of that county:

The confidence of those most interested in the copper mines of this county has not abated one whit. Work is being done on the best claims with flattering prospects. In the Well claim, located at Spencerville, the ore still continues to improve as they sink upon the lead. The shaft has been sunk to a depth of ninety-five feet on the eastern wall of the ledge. We understand that it is proposed to drift through the ledge as soon as a depth is reached where the value of the claim can be fully tested. A drift has been run through the lead at a distance of seventy feet. A miner of fifteen years' experience in the mines of England pronounces the Well lead richer than anything he has ever seen at the same depth. The Mammoth company has been taking out some excellent ore, but the work has been impeded by the large amount of water. J. J. Lyon of Sacramento, is putting up a pump capable of discharging 1,200 gallons of water per hour. The Mammoth will pay well some day. The stock of the company is owned mostly in Sacramento. From the Green Lead considerable quantities of ore have been shipped to Europe. No returns have yet been made from that country, but an advance of $62.25 made in San Francisco has lightened the assessment of the company considerably. The shaft is down about eighty feet on the west wall, and they are now drifting through the ledge. A great drawback to the development of the copper claims has been the want of capital. Many of the owners are poor men and after the first wild excitement passed away, capitalists became frightened. Assessments remained unpaid, and the immense cost of prospecting the ledges had to be borne by a few men. Now, every day or two, agents from San Francisco and Sacramento are traveling over the copper section inquiring what one and another lead can be bought for. Most of those who have been toiling for a year to develop the claims in that section refuse to sell.

Irrigation.—The Visalia *Delta* offers the following very correct and sensible suggestions with regard to irrigation:—In setting out trees bore a three or four inch hole down to water, immediately under the tree when planted, and fill it up with coarse sand, then put in your tree and it will never need any other irrigation than what will be afforded from the lower earth, on the principle of capillary attraction caused by the sun's rays upon the earth's surface.

We have practiced the above method of irrigation, and can with confidence recommend it to our fruit growers. They will find it much less expensive than surface irrigation, and one that will greatly improve the quality of their fruit.

While on the subject we would suggest a better and cheaper method of carrying water through lands, for irrigating purposes, than by ditches, viz: By the use of irrigating-pipes, which are made of a porous material to allow seepage, the clay of which bricks are made in this place, being, we think, of a suitable character. The advantages of this mode of conducting water, which would not be very much more expensive, in the first instance, than open lateral ditches, would be that, in the first place, there would be no wastage of water by evaporation and otherwise; and second, there would be no break in the fields, as the pipes could be buried so deep as to be out of the reach of plow and spade; and thirdly, they would require no repairs; when once laid they would be a fixture for a life-time. But the greatest advantage, in our opinion, is yet to be named, to wit: both ends of the pipe being open, it would, being pervious to water, be a perfect conductor of air, just where it is wanted, at the roots. It is a fact not generally known that vegetation needs fresh air to breathe, and that it is just as essential to its life and growth as to animal life. We are not quite sure that such conductors, of air, to the roots, without water, would be sufficient; but when both are supplied, it renders "assurance doubly sure,"

A Perilous Feat.—The Oil City *Register* describes a feat performed by Prof. J. B. Allen on the 4th of July. The *Register* states that Mr. Allen, who is not a professional gymnast, crossed the Alleghany river on Lay's ferry wire, an inch rope, suspended from a pole at each side of the river, the rope being eighty feet high and one thousand long, and not guyed in any manner, except by the wire of the ferry boat. The Professor's apparatus is described as consisting of a flag-staff set into the end of a piece of ordinary new gas-pipe, surmounted by an eight foot flag. This staff was thirteen feet above and nine feet below the wire. To the lower end of this was a balance weight of seven and three-quarters pounds. This staff was run upon the top of the wire by means of a pully-wheel, not fastened in any way to the wire. The Professor walked over by pressing against this apparatus with his balance pole.

[Written for the Mining and Scientific Press.]

NEW YORK CORRESPONDENCE.

BY FRANK WARDDELL.

NEW YORK, JULY 26, 1864.

EDITORS OF THE MINING AND SCIENTIFIC PRESS:—Yes! sad, sad indeed are my feelings thus to be called upon, as I am in this the first instance of my correspondence, to chronicle the fall of so true a soldier as Maj. Gen. McPherson, one of California's favorites. In the death of this officer, who was killed before Atlanta, on the 22d inst., the country loses one of its ablest and best servants, and the army an engineer who, by the general consent of his fellow officers, stood first and foremost in that department of the service. Gen. McPherson has been on duty in the West since the opening of the war. He was with Buell in Kentucky, and subsequently in the advance of our army through Tennessee. He had the important and difficult duty of keeping open, and in order, the Louisville and Nashville railroad. When the campaign against Vicksburg began last year, he was assigned by Gen. Grant to the command of the advance corps, and afterwards, during the siege of that place, commanded the center of our army. In that position he had the main direction of the siege operations, and was spoken of in the highest terms by Gen. Grant in his official report. Subsequently, Grant wrote a letter urging the confirmation of McPherson and Sherman as Maj Generals, and in it also spoke of both these officers with a warmth and appreciation which was remarkable in one whose language is usually so modest and guarded. After the fall of the city he remained in command there for some time, until he, with the greater part of his command, was transferred to Chattanooga. In the advance from thence upon Atlanta, begun in May last, he has borne a glorious and always prominent part. His corps has been foremost in the fight. His loss is a most deplorable one, and to his companions in arms, to the old army, and to the country, it is an irretrievable one.

REAL ESTATE IN NEW YORK.

There has been no speculation in real estate in New York, as a general thing, lately. Property can be bought for about the same price as before the war, with the exception of what I style fancy property, on Murray Hill, Fifth Avenue, or Madison Square, which, instead of going down, is sold for more than it was six months ago. Houses that last spring commanded, from thirty to thirty-five thousand dollars, are not now to be had at less than from forty to forty-five thousand dollars. The last house sold in Fifth Avenue, 25 by 100 feet, for which fifty thousand dollars was asked in the spring, has recently been sold for sixty thousand. In fact, the price of labor is so high, and first class houses so scarce, almost any price, within reason, can be obtained. The sales of one real estate house have been over six millions of dollars this season—sold to actual tenants and not for speculation.

DULL TIMES AND HIGH PRICES.

The times here are remarkably dull; little or nothing doing; stocks anything but active, and future prospects none too bright. Prices are exorbitant; shirts, for instance, $70 per doz.; clothing (black suit), $95; gents' kids, $3.50; boots, $12 to $16 per pair; first class hotel board, $5 per day; meats 25 cents per pound; sugar 30 cents; butter 50 to 60 cents; and other things in proportion. If something is not done, and soon at that, the poor classes will rise and demand that goods shall be put down to prices within their reach. Matters are beginning to look serious, and if a riot and uprising of the people is to be prevented, influential citizens must soon make a movement for the purpose. There is no use in arguing with hungry people; what they want is food, at fair prices, and that they will have, no matter what the dreadful result may be in the way of bloodshed.

MINING STOCKS AND STATE OF THE MARKET.

The excitement in mining stocks has all died out, with the exception of a few well known stocks. Parties will not so much as look into what you have to offer in the way of operations. The excitement only lasted here about three months, and during that time any and every thing could have been incorporated. All that was required was to advertise your scheme, saying such and such a company, with so many millions capital, will be formed, books open so many hours at such an office, and in the course of an hour or so the stock would all be taken up. What a contrast is now presented. People will not invest one dollar, no matter how promising the scheme. Take the advice of a disinterested party, and do not leave California with the idea of disposing of mining interests here, for, in modern parlance, the thing is now "played out."

A CALIFORNIA JEREMY DIDDLER.

J. Silversmith, of California notoriety, has been figuring around very extensively here, upon the strength of having once been editor of the MINING AND SCIENTIFIC PRESS; also, as the author of a "thousand and one" world renowned publications. No doubt he will try and dupe the New Yorkers, as he did the Californians about his European trip, to represent the mineral wealth of the Pacific slope. In the Pittsburg *Commercial*, of the 25th instant, I notice the following item:—"J. Silversmith, who is in New York, calling himself the "explorer of the Pacific Coast," is pronounced by the California papers to be a humbug and a forger." If a man can succeed with this kind of recommendations going the rounds, why, they are greater fools here than I take them for. This individual has hired a nice office located at No. 28 Pine Street, and styles himself "Stock Dealer" and Notary for Nevada Territory. How he came to receive the appointment from the Governor is really a mystery to me, as it is to many others who know of the artful dodges which he has performed in California upon so many occasions.

THE WEATHER, AND HOW FOLKS DO IT.

The weather is delightful and exceedingly pleasant, for this season of the year. The city, however, is not gay, for most of the *ton* are out of town. It could not be expected to be otherwise, especially if you desire to be considered fashionable. If your purse will not admit of this luxury, instruct your domestic to lock the front door of your residence, and to acquaint all callers that you are out of town. This she does by coming up from the lower door, which gives a more truthful appearance to the story. Readers may laugh, but nevertheless, the thing has actually occurred. Who wouldn't be considered fashionable?

DANGER.

New York streets are dangerous, just now. People are shot down by members of guards in pursuit of escaped bounty-jumpers. Stray bullets come from, no one knows where, often to enter the breasts of the unoffending citizens; and the use of firearms by the mob is the occasion of numerous accidents. Drivers seem desirous of running over pedestrians, and policemen calmly look on, with hands in their pockets, and wonder why the stupids didn't get out of the way. Moreover, when an accident happens, no one seems to consider it his business to attend to the sufferer. Surely this is a glorious state of affairs in a civilized country.

CALIFORNIA BROKERS IN NEW YORK.

The city is full of our Montgomery street "sharpers," all with their eyes wide open, and looking out for an opportunity to dispose of their *valuable* mining interests. I have conversed with many of them who seem sanguine of such an improvement in the times soon, as will enable them to take back with them to San Francisco a comfortable pile of Uncle Sam's currency. They do not look so much "at home" on Wall and William street as they did on Merchant, Montgomery and Washington streets. They seem to feel rather out of their element, which is not surprising, when we take into consideration the different style which the New Yorkers have of operating in stocks. The Metropolitan Hotel seems to be the center where old Californians congregate to talk over Gould & Curry, Savage, Potosi, etc., at the same they do not forget the happy days when del Monte was their "brightest hope and joy." We get the stock sales report each day per telegraph, and very attentively is it read by the San Francisco brokers here. As yet I have not been in any of the "Boards," but expect to go into them in a day or so, other business having prevented your correspondent from accepting of several invitations to visit them.

COLD VS. GREENBACKS.

It is astonishing how the people stare at you if by chance you take a gold piece from your pocket. Persons will come up to you and ask the favor of examining the piece more carefully, it having been so long since they have enjoyed the luxury of handling a gold coin. You will meet numbers who carry a ten cent piece, or other small coin, attached to a watch chain, as a charm or curiosity. I perchance enter a car and thoughtlessly offer the conductor a bit; he looks at me in wild astonishment, and falteringly inquires where I am from; after being duly informed, he heaves a sigh, and remarks "what a glorious country to live in to be sure." It is a task for Californians to get used to this infernal currency (I mean nothing disloyal, but refer to the worn out, greasy, forlorn condition of the same). Then if they have not change, they give you some of their own *private* currency, which is good for one or two cents' worth of whatever article they deal in. To use it looks odd and decidedly "picayunish." When the steamer arrives from Aspinwall, you see these gold operators flocking around the lower grade of hotels, trying to purchase gold from the passengers before they have an opportunity of ascertaining the ruling market rates. Being in one sense of the word a New Yorker, having been born here, I am vain enough to think I know how they perform these artful dodges; but to a stranger who is not "posted," this is a bad place in which to travel alone, "as sure as you live."

SINGULAR DISCOVERY.—Mr. Tourtellotte, a short time since, brought to the office of the Reese River *Reveille*, from Bunker Hill mining district, a number of specimens of great beauty. They were taken from a cave discovered in the Brown lode, and were covered with a delicate frost work of needle-like crystals of various colors, white, green, blue and purple, brilliant and sparkling. Their appearance much resembled a mass of rich, variegated velvet. The ledge from which they were taken is an anomalism in mineralogy. The matrix in which the silver and gold is found is limestone, no quartz having made its appearance. It is undoubtedly rich, native silver and gold being often visible in the rock. A prospecting tunnel had been started in, which, after finding occasional evidences of silver ore, at the depth of about forty feet penetrated a cave, around which were found beautiful crystals, and the rock filled with rich ore. The rock taken out has been experimentally worked at different places, paying from fifty to one hundred dollars per ton. Several tons have been sold to a company running an arastra mill on Big Smoky, at the rate of ten dollars a ton. There are several small mills building on the stream, and work will be commenced in a few days on a ten stamp mill to be run by water. There is a plentitude of rock that will pay from fifty to one hundred dollars per ton, and when the necessary mills for working it are erected, the district will doubtless stand first class among the mines of Nevada.

MEXICAN DOLLARS are growing into disfavor among the Chinese and other natives of the East Indies. A decided preference is now given to silver bullion, even at an enhanced price. California and Nevada Territory will soon be able to furnish all of that commodity that will be called for; and out of it, doubtless a large and important direct trade will soon grow up between San Francisco and the Eastern ports of Asia. A trans-continental railroad and lines of first class ocean steamers to cross the Pacific, will soon become matters of indispensable necessity to the growing commerce of this city.

TREASURE LIST.—The Golden Age, which sailed on Tuesday last, took away with her four hundred passengers and $881,516.28 in treasure, the latter destined as follows: to Panama, $10,000; to New York, $264,924.08; to England, $506,592.20.

The Breath of Life.

Whatever lives must breathe. Whatever shelters or feeds life must breathe also. As is the breath so is the life, for health is but a pulmonary function and happiness a castle in the air. The blood, stifled with ill supplied air or incapable lungs, blackens and curdles; the hair stifled beneath an impenetrable hat, dies and falls away; the skin, stifled by garments too many and too close, or smothered by its own unremoved excretions, yields its duty as guardian of the outposts of life and betrays the citadel to the enemy.

It utters its mute protest against rubber boots and air-proof coats, which, unless briefly and loosely worn, are portable death. Houses, too, must breathe as well as garments. A breathless house is suicide made easy. The asthmatic complains of his labored breathing, but forgets that his house wheezes worse than he through its listed windows and doors. He shuts the casement because it admits cold; he turns the stove damper because it allows the heat to escape. How is his house to catch its breath with mouth and nostrils closed? Mamma folds her sleeping little ones in blankets, and tucks them into their close cribs with impenetrable Marseiles, of a texture fit for a balloon; if the chicks are timid they draw the white drapery over their heads, shutting out any quantity of bugbears, but shutting in a veritable nightmare of exhausted and poisonous air. Warmth is essential to comfort, but pure air and rich blood are the healthiest heaters known.

Observe how Nature breathes. The earth itself floats in an air-bath forty-five miles in depth. The soil must breathe or it will not bear. Not only must the plough let in the air from above, but a porous subsoil or frequent drains must give it an exit from beneath, or you win only grudging gifts from the smothered soil. Choose a flower-vase of wedgewood ware, and without an opening at the bottom, and the rose folds its green calyx in despair about its stifled buds. Nay, let the pores in the stems and leaves become chocked with dust, and the plant dwindles and dies of voiceless vegetable catarrh. The ocean breaths in the trade-winds and laughs in the shouts of the tempest. Its slow-beating pulses are the tides: mountain billows are the heaving of its lungs. The kiss of the breeze gives it health and purity; both are strangled by the leaden weight of a breathless calm, and

> "Slimy things do crawl with slimy legs
> Upon the slimy sea."

Since then our life is but a breath, let it at least be strong and pure, and let us not attempt the futile experiment of seeking it in an exhausted receiver.—*Springfield Republican.*

MINE VENTILATION.—A simple mode for ventilating is adopted at the Hampton mine, near Londville, Northampton. A wooden box has been put in, six inches by three, open at each end, and running 1,000 feet, being the whole length of the adit. An air-tight door is placed across the outer end. The air passes to the working end, and following back, through the adit, goes up an air shaft 300 feet from the outer end; a wooden chimney thirty feet high, placed over the shaft, surrounded by a patent ventilator, assists the current of air. The draft through the box pipe is so strong that it will blow out a lighted candle placed at the end. By this simple contrivance a constant and ample supply of fresh air is supplied to the miners without any expense for working.—*English Exchange.*

It is a matter of no little surprise that, after all that has been said and written about the above mode of ventilation, so many miners will still persist in the old and expensive method of sinking deep "air-shafts." We have never yet heard of any case where the above plan of ventilation, when properly applied, has failed to furnish an abundance of good air. There may be times when the current will be a little slow, but such a difficulty can always be overcome in a few minutes by placing a dish of burning charcoal just within the mouth of the chimney, which should be so constructed as to be easy of access. An apparatus for burning coals in the chimney is best made of stout wire or nail rods, interlaced, and sufficiently dishing to sustain the necessary amount of coals. It should be hung within and a few inches below the top of the chimney, and if once ignited it will soon establish the required current.

MANUFACTURE OF SODIUM.—In the manufacture of this article Mr. Edward Sonstdat proposes to substitute gypsum or sulphate of lime for carbonate of lime, as the gypsum at once oxidises the carbonic acid into carbonic oxide, which has no destructive effect on the sodium, of which a larger yield is obtained. The gypsum is well dried before it is used.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, August 27th, 1864.

The resignation of the Federal Judiciary of Nevada Territory and the decision of the Referee in the injunction case of the Gould & Curry Company *vs.* North Potosi, are the most interesting events of the week in Stock circles.

Efforts are being made to secure a successor to Judge North before the Judges under a State Government go into office, early in December, in order to hold the November term of the District Court in Virginia City, and if the politicians of California, and the bar of Nevada Territory can unite upon a suitable person to assume the judicial robes of the late incumbent, the President will doubtless at once comply with their wishes.

The report of the Referee, Nugent, is worthy the careful perusal of all who are interested in claims upon the Comstock. It is a learned and able argument in support of the one ledge theory, and is alike creditable to the legal acumen and logical power of its author.

The Share Market has been somewhat apathetic this week, and leading stocks were rather less firmly held. At the close, however, a better feeling was apparent and a number of shares are stronger at enhanced rates.

Gould & Curry has been dealt in to the extent of 72½ feet, advancing from $1,450 to $1,500, receding to $1,330 seller 30, rallying to $1,395, again declining to $1,340, then rising to $1,410, and closing last evening at $1,450 asked. The receipts of Bullion for the month of August from this mine, will amount to about $225,000. Three ontside mills are now employed in the reduction of some 30 tons of ore per day in addition to about 60 tons worked at the Company's Mill, and it is stated that a contract has been made with Lamb's Mill to crush the finer ores. It is the intention of the Company to thoroughly prosecute explorations in every portion of this claim, and to extract sufficient ores to meet the expenses attending this work of development and to pay a regular monthly dividend of $50 per foot. It is thought that the management can and will adhere to this policy for some time to come, at least, without making any especial effort to increase the production of the mine for the purpose of temporarily augmenting the dividend account.

Savage has been inactive, declining from $1,275 seller 30, to $1,220 buyer 10 days, and closing at $1,300 bid buyer 30. Receipts of Bullion for the month will, it is thought, reach $150,000. The net earnings of the Company have been accumulating recently, and a dividend of $50 per foot will be declared for the current month.

Belcher is in rather less favor, and is now offered at about $860. No dividend is anticipated for the month of August, owing to certain work necessary to be done in the mine to properly prepare it for future operations, which has interfered with the extraction of ore.

Potosi has been less firmly held and 20 feet were sold, declining from $900 to $850, slightly rallying to $875 buyer 30, and offered last evening at $860. Some half dozen mills will be at work in a short time, crushing 100 tons of ore daily. A large force is now at work in this mine.

Ophir has fluctuated but little this week, opening at $487, advancing to $500 and closing with comparative steadiness at $500 asked—16 feet were sold. The receipts of Bullion from this mine for the current month will amount to some $50,000. The Company's new 24-stamp mill on the Carson River will be in operation about the 15th proximo. This mill has been erected at a cost of some $45,000 for the purpose of especially treating low-grade ores, of which there are 2,000 tons ready for reduction at the mill, and 4,000 tons on the dump at the mine. It is thought that a sufficient quantity of these ores can be taken from the mine to give steady employment to the new mill for more than one year to come and that they will be made to yield a handsome revenue to the Company. The expense of milling will, it is hoped, not exceed $5 per ton. The Central Shaft is now down 100 feet below the level of the seventh gallery in the Ophir, and it is proposed to sink 100 feet deeper before drifting into the latter mine. In drifting and cross-cutting from the same level in the North mine no well defined and compact body of ore has been found lately.

Chollar has been largely dealt in and 95 feet were sold, declining from $505 to about $475. Some trouble has been met with this week in arresting the flow of water from the South West drift, but no future difficulty is anticipated. Telegraphic advices received yesterday, state that this new deposit is now 8 feet in width and promises to become a large and valuable chimney of ore. It is about 120 feet distant from the southern end of the old works in the 4th level, and some 20 tons of average ore from this portion of the mine has yielded some $85 per ton. At the close $490 was bid, buyer 30.

Hale & Norcross advanced from $400 to $490 and was held at the close at $500. The drift from the 545 feet level has penetrated the clay wall of what is supposed to be the Comstock lode, and a few days will determine its character.

Yellow Jacket was sold at $400 and $375, and closes at $360 bid. A vein of good sulphuret ore was found this week. Crown Point is in some request at $350 bid.

Uncle Sam sold at $220, at which it is now offered. Sides was dealt in at $100 per foot. Overman is weaker and in less favor at $150 bid, cash, and $200, buyer 30.

Imperial has steadily advanced from $125, seller 30, to $132 and is now firmly held. Owing to a temporary interference with the water of the Carson, the Rock Point Mill has not made full time this month, but the receipts of Bullion from the mine will warrant the payment of a $6 per share dividend.

North Potosi has been very active, declining upon the announcement of the decision of the Referee against this Company in its contest with the Gould & Curry, from $45 to $15 and selling yesterday at about $16½—759 shares have changed hands.

Wide West has been very largely dealt in and 350 shares were sold within the range of $18@$21, closing at $17. The indebtedness of this Company, not long since, amounted to $50,000. At present there is no indebtedness and a large body of ore now in sight promises to soon employ the Company's fine mill at its full capacity. Independent of this mill costing $130,000, other valuable assets are on hand, all of which are paid for.

Burning Moscow rose from $20 to $22½@$23, declined to $18, 181 feet were sold at these rates. Baltic rose from $12½ to $16½, an assessment of $6 delinquent. Sheba advanced from $17½ to $23 bid, $24 asked.

Lady Bryan has been very active within range of $4½@$5½, closing at $5⅜, 140 shares changed hands. Seneca declined from $18 to $7. Blue Ledge was sold at $2¼, Michigan at $12, Golden Age and Empire at $7, and Pride of the West at $1½@1¾.

The aggregate sales of stock since Saturday last, amount to $265,334.00.

Sales of Mining Shares

For the week previous to Saturday, Aug. 20.

By the San Francisco Stock and Exchange Board.

Saturday, August 20, 1864.

Amount of sales.....$22,328 00

A BIRD'S EYE VIEW OF BUSINESS.

The week past has been one of more than ordinary dulness and inactivity in nearly every department. Trade circles have furnished but few noticable transactions. Jobbers, however, have done a fair average business for the season, while importers generally have been inclined to complain bitterly for the want of customers. The auction marts have been well stocked with merchandise; the bulk of which was for account of Underwriters and though many goods were bought and sold that were but slightly injured, prices ruled low—ruinously so, to the parties most interested.

The public sales referred to above, consisted of coffee, raisins and dry goods. To give details would furnish no criterion for the true market value of the articles enumerated. Our shipping interest is not in a promising condition. Vessels are abundant and suited to all waters and of many flags, yet there are few or no charters on the market, and but a trifling business held out for their acceptance; consequently the great mass of all the shipping in port must go off in ballast, seeking business elsewhere.

It is truly unfortunate that now, when prices of flour and wheat and other grain are high in Australia, China, and elsewhere in the Pacific, that we, owing to a failure of our crop of cereals should be deprived of the opportu-

nity to supply these markets as has been the case heretofore. Still, this is so, instead of being free exporters and sellers of breadstuffs, we are absolutely importers of flour and cornmeal from New York and elsewhere.

We are now receiving some of the benefits of our gold and silver currency. At New York and elsewhere, prices of all the necessaries of life are exorbitantly high, while with us nearly every thing imported is low—with but few exceptions; this is so of nearly all leading articles, while few if any goods are as high here in reality as they are in the markets of the Atlantic States. We can at present prices import flour, corn-meal, butter and a thousand other things from New York, and sell them at what appears to be at a loss upon the face of the transaction, yet the gold which we remitted for the payment of these identical articles commanded a premium sufficient to cover all expenses of their importation, and then enabled us to sell the goods for nominally the same prices or less than they cost in New York, and yet make money by the venture.

EASTERN FINANCES.

Our latest overland mail advices are to the 30th ult. At that date money was growing easier in New York, and the demand for business purposes had materially abated. The Banks were lending and discounting with more freedom and the late stringency seemed to be passing awny. Stocks were not very active, but prices had advanced and the aggregate of transactions was much larger than for some time previously. Government securities were in better favor and an important falling off was observable in speculations for a rise in produce and other articles of prime necessity to the masses. A feature of some interest in our latest Eastern exchanges regarding financial affairs on the other side of the continent was a proposal for a new loan with an accompanying address to the people, by the new Secretary of the Treasury, Mr. Fessenden, which was apparently very well received. The terms of the loan were thought to be exceedingly liberal, and the entire authority of the Secretary for a 7 3-10 per cent. issue, interest payable in currency, was to be used at once. The Treasury officers and National Banks acting as depositaries of the Trensury, were to be prepared immediately to receive applications for this loan. The official announcement of this programme would, it was thought, have a tendency to inspire confidence and insure greater ease to the markets generally. Telegraphic advices received since this loan was placed before the public have informed us that the subscriptions were reaching some $1,000,000, daily. Other loans the same authority says, were to be offered in the shape of 6 per cent. bonds, interest payable in gold and redeemable in twenty years. Certificates of indebtedness, of which there are a large amount afloat, are to be received in part payment of the last loan. The financial policy of Mr. Fessenden is evidently meeting with a fair degree of success and the financial affairs of the Government are likely to be wisely administered. The gold market has been very steady in the East for several weeks past, and no material fluctuation has taken place. Our latest telegraph advices quote gold at 2.57.

Scaffolding Accidents.—Quite a number of accidents have recently happened in this city in consequence of the giving way of scaffoldings. The wonder is that the number of such accidents is not larger. Quite too much carelessness is manifested in the construction of such things. If no law already exists by which the lives and limbs of workmen can be protected, it is time such a law was passed. Contractors should be held to a strict account for such accidents—which are entirely unnecessary, in almost every case.

The Michigan Mining Company, at Gold Hill, after four years of steady prospecting, have struck a fine ledge of quartz.

James M. Day, late Superintendent of the Yellow Jacket mine, is a candidate for Sheriff of Storey county, N. T.

MINING STOCKS.

The following list comprises the prominent Mining Stocks that are commonly dealt in at the Stock and Exchange Board, together with such particulars in regard to the extent of claims, subdivision into shares, incorporate and market value, etc., as may be of interest. In addition to those enumerated below, there are many other claims of great value, whose stocks very seldom or never appear in market, and particulars in regard to which are not at our disposal. We shall add to this list as circumstances may warrant, and will be thankful for any information adapted to make our table as complete and perfect as possible.

WASHOE DISTRICT.

Name of Company.	No. of feet in Mine.	Shares per foot.	Total No. of Shares.	Incorporate Value.	BID Per foot.	ASKED Per foot.	Last Month'ly divid'd ₱ ft.	Recent Assessments Per foot.	Total Ass'ts ₱ ft.

War on Inventions.

The inventive powers of the American people have been particularly active and successful since the beginning of the Rebellion. Much of that genius which previously run to waste upon attempts to construct flying machines fit only for a dusty corner in the Patent Office, or which was exercised in creating reapers and threshing machines, patent churns and bee hives, has turned to military and naval questions and necessities, and in not a few instances taught the world new lessons. The monitors revolutionized naval warfare. The battle between the Kearsarge and Alabama has initiated another revolution, in our opinion, by showing that heavy guns, at short range in a sea fight, are altogether superior to rifled cannon fought at long range. This, however, can scarcely be called an invention; it is only a discovery. But what we started out particularly to allude to was not so much the monitor as a harbor defence, as the torpedo, which has become a formidable instrument; like the earthquake, mysterious, sudden, coming unannounced, giving no time for retreat, no opportunity to surrender, and by the indefiniteness of its location, approach and power, often creating a fear as efficient for the defence of harbor or river would be its explosion under an attacking enemy's keel. How far this fear has kept our fleet from Charleston and other places, it is impossible to say; but we believe it has been more formidable than the torpedoes themselves. These defensive appliances have grown to their present formidable state from very small and harmless beginnings. The rebels in the first months of the war almost exhausted their supply of powder in the loading of torpedoes. The Mississippi River, above Memphis, had about as many of them as of snags and sawyers. Our fellows soon got used to them and fished them up, as a Virginian would oysters in Hampton Roads. They were generally innocuous, wouldn't go off only as they were carried, and served chiefly to diminish the rebel ammunition. But three years of war and experiment have done much, even under the rule of rebels, who before this war were generally considered inenpable of mechanical invention. War and hard necessity have driven them from leisure and cotton to a study of the arts which they had previously thought only fit for Yankee notice. They have brought the terrible subaqueous torpedo to a state of efficiency capable of sending a ship of any size to the bottom more suddenly than went down the Royal George with "Kempenfield and his three hundred." If the war should continue a few years longer, the South will learn that there are occupations for gentlemen to follow besides "scraping cotton," and that a man may apply himself to works of wood and iron without disgracing father or mother or the character of a gentleman. Invention is the faculty which brings man intellectually nearest to God.—*Ex.*

The Northern Gold Crop.—A correspondent of the Dalles *Mountaineer*, under date of August 12th, has enquired carefully with regard to the amount of gold dust, at the present time arriving at and passing through the Dalles, *in transitu* to this city. He has obtained statements from seventeen different firms, and gives estimates from their books, summed up as follows:—

Amount purchased last month	$484,233 19
Ain't deposited for safe keeping	913,000 00
Estimated amount carried through by owners, of which I could make no real statement, but have estimated it as 1-6 of the whole	232,872 00
	$1,629,105 19

The yearly product of pianos in the United States has increased from 2,000 to 20,000 in the last fifteen years, the latter number being the estimated manufacture of the present year.

The Virginia City *Union* says there seems to be a growing sentiment there in favor of the new constitution.

Mechanical and Patent Department.

RECENT CALIFORNIA PATENTS.

Thomas Varney, of this city, has obtained letters patent for an amalgamator, which is described as follows, in his specifications.

I claim, first, The method of fastening the shoes to the upper muller by casting the rivets into the shoes, as shown.

Second, The use of the flanges on the lower edges of the curved plates, in the manner and for the purposes set forth.

Third, The employment of the space for the quicksilver about the periphery of the mullers, with no openings therefrom in the lower muller by which the quicksilver is prevented from being ground, and at the same time is so situated that it is brought into constant and effective contact with the pulp.

Fourth, The use of the slots in the lower muller filled with wood or its equivalent for the purpose set forth.

Fifth, The mode of suspending and driving the upper muller by the arms, u, and ring, l, and finger, v, with its projections.

Improved Hydraulic Hose Pipe.—Mr. Joseph M. Alliuwood, of Timbuctoo, has obtained a patent for an improvement to the ordinary hose pipe, which consists in the insertion of guides inside the pipe for preventing the water from forming a spiral column or stream at the instant of the discharge. This invention has already been noticed in a previous number of the Press, and is doubtless of much value.

Improved Amalgamating Barrel.—James B. Johnson, of this city, has obtained a patent for an improvement in amalgamating barrels, which is described as follows:—"I claim forming the outer shell of the amalgamating barrel or cylinder in several longitudinal sections, so that they may be easily taken apart and relined, substantially as and for the purpose described.

A New Harvester.—Mr. M. A. Wheaton, of Suisun, California, and J. R. Pressey, of Dubuque, Iowa, and David Sheets, of Pike county, Mo., have obtained a patent for a Harvester, the improvements in which consist, first, in an improved means for operating or driving the sickle of the mower or reaper; second, in an improvement in the draught mechanism, and third, in an improvement pertaining to the grain or grass wheel, the manner of adapting the same to the machine. The object of the invention is to obtain a means by which the sickle may be operated with less friction than usual, and the machine rendered capable of being turned with greater facility, and one in which the draught will be materially diminished.

A California Invention at the East.—The Boston *Ploughman* speaks as follows of a recent California Invention:—

We have lately examined a novel machine, invented by Mr. Robert B. Carsley, of California, by which billiard and all kinds of balls may be turned to a perfect roundness, and about five times as fast as by the ordinary method. The whole apparatus is so simple, and yet so practical, that the wonder is that it was not discovered earlier. This invention must certainly prove invaluable to the Government, not merely because of the rapidity with which cannon balls can be turned, but because of the great reduction in the cost of their construction. The invention has met with the approval of Major Gen. Halleck, and Secretary Stanton. It has also attracted the attention of capitalists in this and other large cities, and we have no doubt that it will soon be made available. C. C. Dickerman, 46 School street, will furnish particulars to all interested.

A Heavy Casting.—The Marysville *Appeal* says that the proprietors of the Marysville Foundry, on the 18th instant, made the largest cast ever attempted in Northern California. The piece was the bedplate for a 100-horse power engine for the Manhattan Mining Company, at Washoe City, N. T. This casting weighs seven thousand pounds, being nineteen and one-half feet long by three and one-half wide. The engine and machinery is intended to run a 24-stamp mill. The *Appeal* very properly confesses to feeling a little pride in an announcement that Marysville can turn out so large and elegant a piece of work. It costs about ten thousand dollars.

Shoes are now made under a new patent, with heels and soles of vulcanized rubber, moulded in a single piece, under a high pressure. They outwear the leather uppers.

Queer Quartz Mills.—Parties lately in from the Reese River mines, give the editor of the Territorial *Enterprise*, at Virginia City, a description of some rather queer quartz crushing machines in use in that region. The miners suspend the iron axletree of an old wagon upon two posts and with a crank turn it after the fashion of a common windlass. There are cams, made of wagon tire, fastened to the shaft or axletree, which lift the stamps. The mortar is a block or log with sheet-iron nailed on in such a way as to turn up and form the sides. These mills have from four to six stamps and are worked by hand. Many who have no paying veins of their own are said to make nocturnal raids on the ore piles of their more fortunate neighbors. Watchmen are kept at the mills at night to guard the ore from these guerrillas.

Mr. W. F. Stewart, says the San Jose *Mercury*, has just returned from a three weeks sojourn in Nevada Territory, where he has been putting to a thorough practical test his new process for working silver ore. We are glad to know that he has met with a full measure of success. There are thousands of tons of slum, or ore, from which all the pay silver has been worked by the old methods of amalgamating, piled up around the quartz mills of the Territory. Mr. Stewart takes this ore, and by the application of his discovery, at a cost not to exceed $5 per ton, makes it pay from $40 to $50 to the ton. He has filed a caveat, and taken out his first papers for a patent. Frank has struck his fortune, sure, and conferred an incalculable benefit upon the country.

Construction of Machinery for the West.—A writer in the New York *Journal of Commerce* states that the construction of machinery for working the quartz mines of Colorado and California is being carried on to quite an extent in some of the machine shops in that city, and also at Bridgeport and New Haven, giving employment to a large number of mechanics. M. B. Dodge, of Colorado, the inventor of an improved amalgamator, is now making 400 machines to fill passing orders. The fact that many of the gold mining stock companies now in active operation have the money on deposit in New York banks to pay for machinery when completed, is an evidence of the confidence interested parties have in these enterprises. Dodge insists that there is gold enough in the space of ten square miles in Colorado to pay off the public debt.

Mining Machinery.—An improved apparatus for boring and cleaving stone has been invented in England, which consists in employing a series of jumpers, elevated by suitable cams upon an axle. They propose an apparatus very much like a sixteen-head stamp, in which the stamp-heads are replaced by elongated cutting instruments. The motion is imparted to them in the usual way.

The Dictator going to Europe.—The great American iron-clad, "Dictator," is about to make the trip across the Atlantic, commanded by Captain Rogers, one of the finest naval officers in the United States service. She will be a fair mechanical equivalent for the Great Eastern.

A San Francisco Built Locomotive.—The San Leandro *Gazette* speaks in the highest terms of the new locomotive "E. B. Mastick," built at the Vulcan Iron Works in this city, for the Alameda Valley R. R. Co. It is pronounced one of the finest in California, and a high credit to San Francisco mechanics.

Hospital Bedstead.—S. B. Hill, an ingenious workman at Chicopee, Mass., has invented a hospital bedstead, which the medical men of Chicopee, Springfield and Boston, pronounce a great improvement upon anything of the kind now in use. The frame is wholly of sheet-iron, and constructed so as to be very strong and light.

Ship Building in New York.—In the New York ship yards there are now in process of building forty-eight vessels of all sizes, of which forty-two are steamers—fourteen of these being for the United States Navy—and only six sailing vessels, of which two are for foreign orders, leaving only four for use in our own trade.

Electro-Magnetic Amalgamator.—The Virginia *Union* has seen a model of a new electro-magnetic amalgamator—the invention of Mr. E. W. Peck. He claims for it a superiority over all other inventions of the kind, and is on the way to this State to have one made. A patent has been secured for it.

Scarcity of Coal.—Canadian manufacturers are suffering for anthracite coal. What is dug there is sent to Bermuda for confederate blockade runners, and the United States has stopped the exportation from our territory.

Description of a New Gun invented by James Mackay.

Two or three weeks ago the world heard for the first time of the Mackay gun. Yet, short as this space is, it has been quite long enough to demonstrate that Mr. Whitworth and Sir W. Armstrong must indeed look to their laurels. Mr. James Mackay is a Liverpool timber merchant, and the gun which will in future be known by his name, we believe, has been structed wholly at his own expense, certainly without Government aid. The principles involved in its construction are novel, elegant, and ingenious. Hitherto we have learned to regard windage as a thing to be avoided by the use of every expedient at our command, because it wastes power and leads to inaccuracy of flight in the projectile. Mr. Mackay, on the other hand, turns this same windage to account, and makes it the motive power for spinning his projectiles round. With a smooth bore, it is evident that the gas generated would make its escape quicker than the heavy shot. To prevent this, spiral grooves of much greater acuteness than those employed in the ordinary rifled cannon run through the interior of the Mackay gun, and as the gas follows the course of these grooves, it has to travel about six feet further than the shot before the muzzle is reached. It is thus prevented from escaping before the shot, which is whirled swiftly round by the revolving current of gas that follows close upon and grasps it, as it were, in its embrace, during its passage through the chase of the gun. The rotary motion is thus imparted to the shot solely by the friction of the escaping gases on its smooth sides, the gun having in all respects, save these spiral grooves—which must be confounded with rifling proper—the character of a smooth bore, as the shot rests, upon the raised surfaces of the grooves, by which its motion is not impeded. Thus the initial velocity of the smooth bore is obtained as well as the rotary motion necessary to precision; and considering the importance of high velocities as exemplified in the effectiveness of the old 68-pounder at short distances, it is a great deal in favor of the Mackay gun that it discharges its shot with a momentum of some 300 or 400 feet more per second than does the Armstrong gun. The projectiles used are cylindrical steel bolts with a conical head. They are balanced from the center, and the smaller weight at the cone end is compensated for by scooping out a portion of the metal at the other end, and they are perfectly smooth.

The experimental gun has been manufactured of wrought iron by the Mersey Steel and Iron Works Company. It weighs 9 tons, has a bore of 8-12 inches, and in other respects corresponds with the general features of the ordinary 68-pounder. There are twelve grooves, and, as the shot do not enter these grooves, it allows of a much sharper twist than in ordinary rifled guns. The velocity has been found to be 1640 feet a second; the utmost range has not yet been tested. Messrs. Laird and Company, of Birkenhead, are now building an armor-plated vessel called the Agincourt, for the Government, and it was agreed to test the gun against a section of the side of that vessel. It was intended to make the trial last Saturday, but unfavorable weather prevented its being proceeded with. On Monday morning, however, the experiments commenced. The target consisted of an outer plate, 7 feet square and 5½ inches thick, of rolled iron; next came 9 inches of teak, then an inner plate or skin three-fourths of an inch thick, then angle-iron and ribbing, and finally a packing up with timber balks and supports 18 inches thick. The plates were stated, on competent authority, to be the best that can be made of rolled iron. Messrs. Laird & Co., supplied the whole, and expressed confidence in the strength of the target. The gun was fired in the presence of Mr. James Mackay, Mr. D. Mackay, Mr. Bouch, and other gentlemen, shortly after 8 o'clock in the morning. There is a little novelty in the mode of loading. Between the powder and the shot a bag of sawdust is placed, Mr. Mackay's object being to give, by means of this substance, a slight movement to the shot before the whole of the powder is ignited. This, without diminishing the force of the charge, prevents a heavy concussion, and renders the danger of bursting considerably less; so much so, that the inventor expresses his confidence that a charge of 100 pounds of powder would not damage the gun. The recoil of the gun, as well as the report is comparatively small. On Monday the gun was charged with 30 pounds of powder and a cast steel shot, weighing 167 pounds, made by Messrs. Thomas Firth and Son, of Sheffield. The range was 200 yards. The shot struck the target with a dull thud a little below the hull's eye on the right, and in the very strongest part, where it was backed up by the rib of the ship's side, the angle-iron, and the timber balk. At the point of impact a perfectly circular hole was cut. The shot then powdered the teak, passed through the inner skin and the angle-iron, shattered the timber balk into fragments, and was picked up 82 yards beyond the target, together with a circular piece of iron armor, about 80 pounds weight, which it had carried with it through the back supports. The sand showed that it had spun to the last. About 70 fragments of the inner skin and angle-iron were picked up 100 yards from the target. The shot when found was reduced from 13 inches to 11 inches in length, and increased about an inch-and-a-half in diameter at the end which struck the target. The other end was uninjured. The whole target was forced back about 6 inches, and so much deranged that more shots were not fired.—*Mechanics' Magazine, London, April*, 1864.

Cheap Gas.—An anthracite gas lighting and heating company has been recently formed in New York, which has an advantage over other companies in the ownership of a patent for making gas from a mixture of anthracite and bituminous coals, which is said to be superior to the ordinary gas, and can be made 25 per cent. cheaper. It has been tested in full sized works in the city of Elizabeth, N. J., and other places, for over two years, with perfect success. The gas has a special adaptation for heating purposes, being far cheaper for small manufacturing operations and for household use than coal. The saving of labor and dust in this mode of heating over coal is obvious.

Durability of Bricks.—An impression exists in reference to the want of durability in bricks as a building material, of the correctness of which a little reflection will convince us there is some doubt, provided they be properly made. So far from being most perishable, they are the most durable substance; and the bricks of Nineveh and Babylon, in the museums, show that they were selected by the Ancients as the most lasting material. Plutarch thinks them superior in durability to stone, if properly prepared; and it is admitted that the baths of Caracalla, those of Titus, and the Thermæ of Diocletian, have withstood the effects of time and fire better than the stone of the Coliseum, or the marble of the Forum of Trajan; yet the bricks of Nineveh and Babylon (and we believe those of the Romans also,) were only sun-dried—not baked or burned, as the modern practice is.

English Peals of Bells.—A correspondent of the London *Builder* says: "We have now in London and different parts of the United Kingdom about fourteen peals of twelve bells; 50 peals of ten bells; 600 peals of eight bells; 700 peals of six bells; and about 400 peals of five bells; and a great number from one bell to a chime of four bells; and all these peals of five to peals of twelve bells cost each from £300 to upwards of £2,500. So you see what a merry ringing island England is; and a melodious peal of bells is perhaps not less captivating than the finest toned instrument ever yet invented."

Ancient Aqueducts.—Many have believed that the ancients were ignorant of the law that fluid in pipes will rise to the level of the source, because in all the ruins of their aqueducts, the channel is a level slope. Some of these aqueducts, as works of magnitude, are not inferior to the great wall of China, or the Egyptian pyramids; yet, at the present day, a single pipe of cast iron is made to answer the same purpose, and even more of the principal, but want of fit material for making the pipes, which cost our forefathers such enormous labor.

The Hoosac Tunnel.—Operations upon this great work are still being pushed with the greatest vigor. It is said that 500 men are now constantly employed on the tunnel.

An officer at Bermuda Hundred says the rebels are using shells made of stone, in conical form.

Supposed Discovery of the Body of St. Patrick.—Some of the English papers contain a most curiously interesting statement, to the effect that while the workmen engaged in the renovation of St. Patrick's Cathedral, Dublin—the oldest church in Ireland—were digging up a portion of the flooring in one of the aisles, they discovered a large stone coffin, of very curious workmanship, buried only a few feet below the surface. The coffin, when it was opened, was found to contain the skeleton of an ecclesiastic, supposed to have been buried there six hundred years! The skull was perfect, and the bones crumbled into dust when exposed to the air. On the lid of the coffin there was a full length figure of a bishop in his robes. It was inspected by some antiquarians, including Dr. Todd, who expressed it as his belief that it was the original founder of the church, St. Patrick. It is in good preservation, and is in every respect a most interesting relic. When the church is finished it will be placed in a most prominent position, because there is no more remarkable antiquity in the building. What degree of confidence is to be placed in this statement, we are of course unable to say, but give it as we receive it, for what it is worth.

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

WASHOE.

The times in Virginia City are very dull at present, but the conviction appears to be gaining ground that the worst is over. No one attributes the cause of the depression to any important depreciation in the mines. The constantly increasing shipments of bullion precludes any such idea. The difficulty has arisen mainly from mismanagement. Important changes in that direction have been made which, it is confidently believed will soon restore confidence, and provide immunity for a future occurrence of a similar calamity to any considerable extent. The lack of confidence in the Judiciary of the Territory has also had an important effect in producing the depression. This difficulty has now been happily removed, by the resignation of the Judges, and it is to be hoped that the reconstruction of this branch of the government, whether under a Territorial or State rule, will be made upon a basis which will ensure the confidence and respect of the people.

The mines are decidedly improving in appearance. The Savage is now taking out large quantities of bullion. The mine is under most excellent management. Mr. Day the superintendent is very popular with the miners, and can always secure the best labor in the market.

Many of the principal mines are increasing the force of their hands. The Gould & Curry have recently added about 100 men to their employ. A large quantity of good mineral is now coming out of their lower gallery, sufficient to keep their own mill steadily at work. The resumption of operations on the Potosi, Bajazette and Golden Era will give immediate employment to several hundred hands, and greatly reduce the number of idle men about the streets.

Much interest is being felt in El Dorado Cañon and the Truckee. The impression appears to be gaining ground that an abundance of coal for home consumption, and even for exportation will soon be raised in the localities above mentioned. We append our usual condensation of the current mining news:

The Michigan Company after four years of steady prospecting, says the *Piute*, struck a fine ledge of quartz last week, which promises to amply reward the prospectors for the labor and money which they have expended. They are down 400 feet, Have run a drift from the bottom of their shaft to the vein, into which they have driven seven feet without finding the eastern wall. Several tons of rock have been raised, but the water has put a temporary stop to operations—which will continue a few days only. It is confidently believed that the mine will soon be placed on the dividend paying list. The Michigan was the first location for quartz on Gold Hill, made in 1859, at a time when all others were locating for surface diggings.

Reliable information from the Chollar announces the fact that, at the end of the drift (40 feet,) a vein of six feet. rich ore, has been struck. The vein is 100 feet west of the east line of the Potosi.

The Mary Ann Company, have just started up their fine new work-. Their engine is about 15-horse power and works splendidly. As soon as they get their mine properly opened, a more powerful engine will be used. Their shaft is down about 300 feet. Mr. Plaisted is superintendent of the works.

The Atlantic Gold and Silver Mining Company, situated in Devil's Gate District, have struck their ledge and are now taking out some very fine looking ore. This company has worked with varied success since the spring of 1860. The ledge which they have at last struck promises to turn out rich.

The Mary Ann Company, according to the Gold Hill *News*, commenced operations with its steam hoisting works on the 15th inst. Its new works are very strong and substantial. The engine is of about twelve-horse power, but it is geared so that its nominal power is doubled. The company intends to sink down now, as deep as either of its neighbors, the Overman or Uncle Sam, which it has heretofore been prevented from doing by the amount of water which came into the shaft.

The machinery of the Piute mill is now being put up. The engine is one of the Corliss patent and is about 80 horse power. The machinery has not yet all arrived, but it is coming every day. The mill will be ready to run in three or four weeks.

Surface Diggings.—A company of three men, says the *Enterprise*, are at work on American Ravine, on the east side of American Flat, at surface mining. The dirt is shovelled into sluices and pays about three dollars per day to the man in fine gold The company are in hopes that they will after awhile find something better.

The Athens Company, located in the mountains just west of Carson City, are taking out rock which it is expected will yield from $100 to $200 per ton. If this expectation should be realized it will prove a good thing for Carson, and open up quite a new field for mining operations. The editor of the *Union* has seen a bar taken from a crushing of rock from this mine valued at $205 in gold and $32.68 in silver. It is therefore a gold mine.

Bullion from Sullivan District.—We were shown, on Saturday, says the *Union* of the 15th inst., a handsome lump of bullion from the Ætna mine in Sullivan District about nine miles south of Dayton. The certificate of Charles Uzzuy showed it to be the result of a working test of 2545 pounds of rock. The lump of bullion weighs 21½ ounces and is about 30 per cent gold. The rock was taken out with a view to a practical test of the working value of the ledge and is believed to be a fair criterion. The facilities of working the mines of that district are excellent, there being an unlimited supply of free pure water, and wood at four dollars per cord, and rock could be crushed at a profit for ten dollars per ton. When times shall become a little easier, the Sullivan district will occupy a prominent position among the silver regions.

To Resume Operations.—The *Enterprise* says the Potosi and Bajazette and Golden Era companies will resume operations again in the course of ten days. A gentleman who knows informs us that the Potosi company have a large amount of exceedingly rich ore ready to raise from their mine. They will put on a strong force of men and make up for lost time. This is good news to several hundred men—teamsters, owners of toll-roads, miners and mill men.

Coal.—It is reported that the David Law Coal Mining company, situated on the Truckee river, about 22 miles west of Virginia City, have bored through a vein of superior coal, eight feet thick, at a depth of 306 feet. The stock of the company has taken a rise in consequence, of several hundred per cent. They intend erecting machinery at once; and in two or three months will probably have a large supply of an excellent quality of coal in the market.

REESE RIVER.

Professor R. A. Fisher, of Yale College, who recently visited the Reese River mines in company with Messrs Holmes and Bacon of St. Louis, in a letter to a friend, says that "Austin will be the city and place of Nevada," a very flattering and encouraging remark surely, and especially when coming from such high authority. There can be no other inference drawn from the reports which are daily coming from the Reese River country, that it is soon destined to become a large bullion producing district.

It appears that hand and power mills are constantly going up there. The hand mills are now crushing so much rock that they are in great want of some suitable machinery in which to amalgamate it. The *Reveille* calls for some enterprising person to put up a pan to be run by horse power for the convenience of the hand mills, and as an inducement for others to go into that business. Messrs. Miller & Saudborn, to encourage this class of work announce that they will put up, in a short time, a roasting furnace, for the benefit of the hand quartz mills, which will roast about two hundred pounds of ore per day. This will enable these mills to run steadily, as they can obtain an abundance of ore that will pay them well, provided they could get it roasted.

The *Reveille*, to show what these mills can do, gives the following instance:

A gentleman of this city, the owner of a quartz mill which crushes its rock with one stamp, in a hand mortar, took the crude bullion of less than three weeks' work to Miller & Lundborn, for assay. It yielded the handsome sum of $414, in a nice silver brick, which was 960 fine.

We condense the following items from the *Reveille*:

Miniature Quartz Mill.—Mr. Charles Johnson, on Cedar street, has constructed a hand quartz mill that for neatness of construction and mechanical arrangement cannot be surpassed. There are four stamps of fifty pounds each, raised directly by cams on a shaft, which is turned by hand. A large balance wheel on one end of the shaft gives a very easy and steady motion. The battery is operated by one man without difficulty. This little machine was constructed very cheaply, and can be worked very effectively.

Another Hand Mill.—We notice a new two stamp quartz mill, propelled by hand in operation, opposite the store of Gridley & Jacobs, in the Fourth Ward. It is the property of M. Perkins & Co., who expect to run it constantly, and will probably make money out of it.

More Quartz Mills.—A new ten stamp quartz mill for Summit District has just arrived from San Francisco, and will be put up immediately on Big Smoky, twenty-five miles from this city. Workmen are now engaged in building the foundation, and it will be in running order in about six weeks, as everything necessary for its completion is on the ground. Another company who design putting up another mill in the above district of the same capacity, were in the city a few days since negotiating for a mill site.

New Mill at Work.—The Cortez Mill, in the Cortez District, has commenced work. The first rock crushed was from the Berlin lode. The mill is designed for sixteen stamps and as many pans, although but half that number are now used. The machinery has been put up with great care, making it one of the most complete, substantial and best arranged quartz mills in the country. It lacks, however, a roasting furnace, which will be a necessity in successfully working the rich sulphuret ores of that district.

The ore from the St. Louis Garrison, and Idaho lodes in the Cortez District are said to be very rich, pieces of several pounds weight being found of almost pure black sulphurets.

Mill Site Sold.—A mill site in Summit District was sold a few days since for the sum of $2,500. For water mills, this district can not be surpassed on the coast. Everything is looking up in that section of country, and if they can only get enough mills to work the ore, it will be one of the richest portions of Nevada Territory.

O'Dougherty & Co., of Eagan Cañon, are putting up a mill, which they expect to have in operation by the first of October. The machinery has already arrived at Austin, from which place, it was calculated ten days would take it to the Cañon.

Jim Lode and Company.—Mines not known to fame nor to the world of Austin are occasionally to be found in full view of the city. Such is the Jim, a lode running parallel with the Black Rock. The ore is quite rich in black sulphurets and shows some ruby silver. There are eight hundred feet in the location, and the men working the claim are the owners of three-fourths of the whole. They have great confidence in its value and evince a determination to thoroughly develop it.

ESMERALDA.

A correspondent from Aurora writes under date of August 20th, that business is about the same here that it is all over the Territory, but one thing speaks well for Aurora, there are not many idle men to be seen on the streets in the day time. Mr. John Daggett is going to take charge of the Antelope mill and mine, the former superintendent having resigned. The mills here are nearly all running and doing well. The evidence in the case between the Antelope and Young America, has been given before a referee, who yesterday gave his opinion in favor of the latter claim. If Judge Turner concur sin Mr. Jamison's opinion it will make quite a difference here in the way of labor for miners, and will materially help to revive the town.

The development of the Bodie District is going on vigorously. Several large teams are constantly engaged in hauling rock to Lufkin's mill, and the yield is highly encouraging. The Esmeralda *Union* says that since pay rock was first struck in the district, the mines have steadily increased in richness. Professor Silliman, three months since, visited Bodie, and at his recommendation a company of New York capitalists have invested to the tune of $500,000, in currency, and will soon put up a quartz mill of eighty stamps, somewhere in the vicinity of their purchase. The proximity of Bodie to Esmeralda is beneficial to both districts, as the miners of the former place depend entirely on Aurora for supplies. In another column will be found a lengthy letter from a travelling correspondent, in reference to this locality.

New Strike.—The *Union* speaks of a new discovery a short distance above the Alturas and near the Tennessee, on Middle Hill, a few rods east of Esmeralda gulch, On the surface apparently the ledge is only about two feet thick, but increases very fast in thickness as the shaft is sunk deeper, the width of the ledge at the depth of twenty feet being about four feet, and from present appearances it bids well for becoming still larger as the shaft progresses. The rock being taken out is very rich and is expected to yield a very handsome profit to the owners. There are only six hundred feet in the claim, which is owned entirely by Messrs T. Wilburn, L. Taylor and J. W. Miller. From ten to fifteen tons of very rich ore have already been taken out, and as soon as practicable, more hands will be put to work in the claim.

CALIFORNIA.

The activity in the California mines, heretofore of late noticed, still continues. We append our usual summary selected from various sources:—

Nevada County.—The Nevada *Gazette* says that 22 tons of rock from McCutchen's lead, near Canada Hill, recently crushed at the French mill, yielded fifty ounces in gold. Reckoning it at $16 to the ounce, which is about what this quality of gold is worth, the rock paid just $40 per ton. Mr. McCutchen has quite a large lot of rock taken out, but for want of water to run the mill will not be able to get it crushed at present.

The *Gazette* also learns that the gross proceeds of gold taken from the Enreka Tunnel Company's claims at North San Juan, during the past year amount to something over $140,000. The Company paid for water during the same period, upwards of $30,000; for powder, fuso, etc., about $10,000; and divided among its members, $70,000; the remainder of the sum total having been expended for labor and other necessary expenses.

The Grass Valley *National* says that Robert Smith & Co. have just built a new quartz mill, on Little Wolf Creek, on the site of the old Orleans Mill, near Osborn Hill. It was perfect when set in motion, and worked without any breakage or need of repairs. Since August 1st, four new quartz ledges have been discovered and located within two miles of this place, all promising well.

Sierra.—The Downieville *Messenger* says that the Keystone quartz company, situated near Sierra City, reports from which have been of a very favorable character for some time past, struck their ledge and at a much lower point than ever before worked, having been for a considerable time running a tunnel for that purpose.

Tuolumne.—The Tuolumne *Courier* says that the "Star" or Jones lode is proving quite as rich as was expected, and Mr. Jones, the proprietor, has a fortune in sight. It is located about two miles above American camp, and 11 from Columbia. There is a ten-stamp mill on the claim. The last run of four days, crushing about 25 tons of rock, yielded 168½ ounces of gold. A run of three days previous, running five stamps, and crushing ten tons of rock, the yield was 110 ounces. The rock contains considerable silver, and fine wires have been found of this metal, perfectly pure.

The South extension of the above, owned by Dr. Baldwin and Messrs. Treat & Dillon, of Columbia, is also rich. The editor of the *Courier* has seen a splendid prospect from some rock taken from their claim, about 25 feet from Jones' line. The lode can be traced all along the surface and shows free gold throughout.

Siskiyou.—The Siskiyou quartz lode still prospects immensely rich, says the Yreka *Journal*, paying about a thousand dollars to the ton of rock. Owing to the hardness of the quartz the work of getting it out progresses very slowly. The *Journal* further says that the miners of Scott river have their claims very generally opened and ready for washing. The prospects are good.

Tehama.—The Original Williams & Kellinger Company, Pittsburg, says the Red Bluff *Independent*, are now taking out some of the finest copper we have seen in the State. Twenty-five tons are ready for shipment, and will be at this place for the next boat. Three tons per day are being taken out, all selected ore. It is all alike, and must be worth at least $100 per ton in San Francisco.

The timber for the quartz mill at Copper City is all on the ground, and Mr. Kelly goes below in a few days to get the machinery. When this mill is up and at work, we shall record the weekly shipment of bullion from the rich mines of Pittsburg. No splurge or excitement has been made over these mines, but we know the mineral is there in quantities, and knowing this, the companies have gone to work coolly and in a business manner. Pittsburg will yet astonish Washoe.

Numerous hypotheses have been formed from time to time to account for the origin of the elliptical orbit of the earth, but all candid mathematicians and philosophers admit that the best of the theories of explanation are unsatisfactory.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

☞ For New Mining Advertisements see last page.☜

San Francisco:
Saturday Morning, Aug. 27, 1864.

Mechanics' Fair Daily Press.

Our arrangements for the Mechanics' Fair Daily Press are complete. The paper will be printed in the Pavilion, daily during the continuance of the Fair, upon Gordon's largest size Franklin Press, and driven by one of Roper's Hot Air Engines. The sheet will be got up in a neat and attractive style, and circulated gratuitously. It will be devoted mainly to matters connected with the Exhibition. The advertising space is necessarily limited and is fast filling up. Those who wish to secure the superior advertising advantages which it will afford, will do well to apply immediately at the office of the Mining and Scientific Press.

MONETARY AFFAIRS.

The money market is unchanged in any essential feature, and the increased activity in loans predicated upon the late decision of the Supreme Court, securing to capitalists all that was desired for their protection, has not been made apparent as yet. Loans have been made upon Bond and Mortgage Securities at rather more favorable rates of interest than formerly, and we believe that considerable sums of money are seeking such an outlet for investment; but in Bank and in the open market, applications are still numerous and the facilities afforded to borrowers are extended with the same degree of caution as heretofore. The mercantile classes are, generally speaking, in a comfortable condition. Many of the importers from domestic Atlantic ports have made handsome profits in remitting currency payments upon a steadily advancing gold market for two years past, but importers from foreign ports, who have not been so fortunately situated, and the jobbers whose credit to the country dealers six months since promised to be unavoidable, for some time to come, are likely to require a full loan of discount from the Bankers, and are at this time preparing themselves for a little stringency during the approaching fall. Stock collateral loans are negotiable with less difficulty and first class shares are meeting with more favor among money lenders. We learn of transactions at 1½ per cent. per month on call and for short time loans. Gould & Curry, Savage and Potosi are preferred by capitalists, but loans upon other stocks are also effected at higher rates of interest and with larger margins from current market value.

Legal Tender notes have been exceedingly dull and inactive this week at about 39 cents and 39½. Large disbursements have been made by government officials recently and the market is for the moment abundantly supplied.

Copper Ore Shipped.—The "Garabaldi" which sailed the past week, took away 500 tons and 90 barrels of copper ore. Copper ore is rapidly becoming an important article of shipment from this city.

SOUTHERN TRADE.

Immediately after the fall of Vicksburg, and the subsequent opening of the Mississippi river, a fever of speculation seemed to seize upon northern and western merchants, and our generals on the Mississippi line were constantly beset for permits to open trade with such portions of the South as had been passed over by our armies and placed within the federal lines. Large amounts of goods were consigned to Memphis, Vicksburg and especially to New Orleans. At first permits for trade were quite freely given; but government soon found that a door was being indirectly thrown open to a species of contraband trade, from which its enemies were deriving important advantages. A greater circumspection was therefore enjoined upon those in military command, and licenses to trade were less freely given, and with more stringent provisions. Much dissatisfaction was thereby engendered towards those in authority, and charges of a vacillating policy were freely urged against the government. The anticipated profits of trade were soon found to be but a myth; and late advices, particularly from New Orleans and the lower Mississippi, inform us that the business which was expected to grow up there in consequence of the suppression of the rebel power in that quarter has proved an absolute failure.

There is a consideration connected with any revival of trade with the South, which appears to be almost entirely overlooked by the North. The fact that the productive industry of the South has been entirely suspended for the past two years seems not to be considered. The elements of southern society have been completely overturned by the ravages of this terrible war. Nearly all the artificial wants of the people have ceased to exist in that ill-fate region, by reason of the stoical indifference to anything but absolute necessities, into which that portion of the population which remains at home has schooled itself. As society now exists these traders might as well attempt to open general commercial intercourse with the natives of some newly discovered land, as with people of the once great and flourishing Southwest. A single cargo of flour, or a solitary invoice of clothing is now sufficient to glut the market of the great city of New Orleans, whose extensive levees were but four years since crowded with goods of every description, and whose river front presented a perfect forest of smoke-stacks, belonging to the great fleet of steamers which then knew none other than errande of peaceful and flourishing commerce. The terrible change which reckless rebellion has brought about is horrible to think of!

The idea that mere military possession is going to open up an extensive and profitable business, before the blessings of peace shall have first been spread over the land, and industry thereby once more returned to its accustomed channels, is a delusion which it were well to banish from our minds.

The South seeks to destroy the best government ever established upon the face of the earth, and would found upon its ruins an oligarchy based upon slavery—of all governments the one least in sympathy with true religion and human progress. A just God will avert such a calamity both from those who seek it and from those who would prevent it. Peace and union will, in God's own time, come again to our bleeding and distracted country. When the passions of men are stayed, the South will again become the paradise it was; and when the people shall be purged of their sins and the false ideas which have driven them to the brink of ruin, then shall our whole country, united, happy and prosperous, beyond all former precedent, rise like a garden from out the her present sea of desolation.

It is said that oysters placed in an aquarium will keep it free from the *Spores*, of seaweeds. "Spores" or "Sporules," in botany, are that portion of flowerless plants which perform the function of seeds.

Important to Copper Miners.—The necessity of a cheap method of raising the per centage of poor copper ores to a paying standard is recognized by all copper miners. We have not yet heard of any machinery which appears to give satisfaction in the accomplishment of this work. Mr. Hunter, the inventor of "Hunter's Concentrator," already fully noticed in our columns, feels very sanguine that his machine will do the work, thoroughly and cheaply. It is self operating, being fed directly from the stamps, and depositing the ore at one end of the machine and the earthy and worthless portion at the other. The advantages of concentration are manifold, effecting an important saving in sacking, transportation and an increased proportion of value of the ore as the percentage is advanced. The old plan of "jigging" is very laborious and quite too slow for the high price of California labor. There are thousands of tons of refuse ore now laying worthless at the mouth of our various mines, which the introduction of the proper machinery would bring into the market. We would suggest to persons interested in copper mining to call and examine Mr. Hunter's machine and judge for themselves of its applicability to the work of concentrating of copper ore.

Death of S. W. Langton.—We regret to state that S. W. Laugton, the well known expressman of California, died on Tuesday night last. It will be recollected that Mr. L. met with an accident some two weeks since by being thrown from a buggy, and subsequently underwent the amputation of a leg. Hopes were entertained that he would recover; but a sudden relapse set in, under which he expired as above. Mr. Laugton established an express over the mountains early in 1850, which has since been extended, from time to time, until it now connects with most of the principal mountain towns in northern California, and Nevada Territory.

The Ladies' Christian Commission Fair, at Union Hall, is proving a great success. It has been thronged daily and nightly since it opened. The sales are lively, and everything connected the institution goes "merry as a marriage bell." This new effort is another great and glorious proof of California's loyalty and liberality, and the interest she feels in the mighty hosts of patriotic heroes, who are pouring out their blood so freely for the safety and salvation of our country in this her time of greatest need.

A Glut.—It is said that the amount of merchandise now in bond, in this city, is unusually large. Most of the warehouses along the bay front are gorged with goods. That on Lombard street alone contains between two and three thousand tons—near fifteen hundred tons of which is Manilla sugar. Even iron is being bonded under the increased rates of tariff, a thing heretofore almost unknown.

The Warm Spring Hotel, kept by Messrs. R. S. Gardner & H. Blaising, is located about one and a half miles east of Carson City, N. T. Mr. Gardner was formerly proprietor of the Crescent City hotel in this city. Connected with the house is fitted up a bathing place, where visitors can secure the benefit of the warm mineral springs from which the hotel derives its name. The mineral qualities of these springs are pronounced by physicians as the best in the Territory. They are said to contain about all the peculiar medicinal qualities required by most invalids; and parties who have visited them generally acknowledge having derived much benefit therefrom. An omnibus runs regularly between the hotel and Carson City.

New Warehouse.—A magnificent brick warehouse, three stories high, and covering a fifty vara lot, is being erected by Mr. Treadway at the corner of Fremont and Market streets.

The passengers who arrived in San Francisco on the 30th of August, 1849, by the ship Humboldt, intend celebrating the day in this city, on Tuesday next, by a general re-union of those living.

ELECTION OF OFFICERS.

Consolation G. & S. M. Co.—Meeting, Aug. 10th, 1864: Trustees, Thos. N. Cazneau, M Cody, M. M. Closkey, D. J. O'Callaghan, F. O'Farrall, Daniel McCarthy and M. Guerin. President, Thos. N. Cazneau; Vice President, M. M'Closkey; Secretary, Michael Hawkins; Treasurer, Michael Cody; Superintendent; Gen. James Shields.

San Lorenzo G. & S. M. Co.—Meeting, Aug. 16th. Trustees, G. B. Davis, Daniel Swett, I. F. Babcox, A. W. Rice and Daniel S. Flagg. President G. B. Davis; Secretary, Milo Calkin; Treasurer, E. Worth; Superintendent, Daniel S. Flagg.

Later from Sooke.—The latest accounts from the Sooke mines, *via* Victoria, indicate that the diggings are extending. The several claims mentioned lately continued to pay about as usual. The Wake-up-Jake Company is taking out from one hundred to one hundred and fifty dollars per day. A claim next to the above, worked by two men with a rocker, wash out their ounce a day regularly. They cease their labors for the day, so soon as the regular *quotum* is made. Thain & Co., have been averaging from five to seven dollars per day to the hand. A Victoria paper of the 14th inst, says: "The intelligence received from our Island diggings continues highly satisfactory. Few have, so far, returned without the intention of retracing their steps, and the number of miners now on Leech River is said to fall not far short of 800. About $2,000 have been spent for license, etc."

Per contra to the above, the Olympia *Tribune* speaking of these mines says:—"The golden representations that came up from there last week induced some of our citizens to take a prospecting tour down that way. They returned not very favorably impressed with the idea of abundance of hidden treasure in those regions."

New Route.—It is intended ere long, that passengers for the northern interior shall leave the Latrobe train at Folsom, go thence by rail to Lincoln, over the Central Road, and there take the stages for Auburn, Grass Valley, Nevada and Marysville, at which places they can then arrive by daylight of the morning after leaving San Francisco. At Marysville passengers can take the Northern Railroad cars for Oroville, connecting there with the stages for Red-Bluff, Shasta, Weaverville and Yreka, and reach Shasta in 24 hours from this city. These new arrangements will greatly expedite the transportation of the mails, expresses and passengers. They furthermore contemplate the landing of passengers from this city at Freeport, about eighteen miles below Sacramento, and will consequently leave that city entirely out of the route of travel to the interior. Of course the Sacramentans are very much excited about it and avow their determination to withdraw all patronage from any steamer which will stop to land passengers or freight at Freeport. It may be and is hard upon the city of Sacramento which has already suffered so terribly from fire and flood. But the laws of trade and travel are inexorable, and will always find the most favorable route —as surely so as water finds its level.

The Table Mountain Copper Mine shipped, the past week, per "Garabaldi," 65 tons of ore, the finest which has ever come from that mine. The last lot assayed 21 per cent., and was shipped just as it came from the mine. About $4,000 was realized from the shipment. This mine is now sustaining itself and will soon be able to declare dividends. In fact only $3.05 per foot has ever been asseeed by this company. They are now working 25 hands, have a good steam hoisting apparatus, with a shaft 160 feet, and two galleries, between which stopeing has been commenced. The vein is four feet wide, of concentrated ore, at the bottom of the shaft. This is one of the most promising copper mines in the State.

Treasure from the North.—The *Pacific*, which arrived on Thursday, brought down $528,689; of which amount $325,465 comes from Portland and $203,224 from Victoria.

The Science of War.

The science of war is receiving its share of improvement in America, like everything else, although when the present contest broke out we were essentially behind the great military powers of Europe in our knowledge of military matters. In no respect is this more clearly evinced than in our field works, the construction of which has called forth a remarkable degree of inventive ingenuity. The Richmond papers speak of Butler's works at Bermuda Hundred as marvels of scientific intricacy. They consist of high earthworks, defended by a ditch twelve feet wide and a perfectly impenetrable abattis, the trees and branches composing the latter being thickly interwoven with wire. According to the rebel account, had there been no garrison defending this work it would have taken the rebel troops two hours to get into the intrenchments. Some of Lee's works at Spottsylvania were nearly as formidable, rendered so chiefly by the ingenuity displayed in the abattis. Grant's works in the siege of Vicksburg were wonders of engineering skill. In artillery our armies are undoubtedly superior to any in the world, not only in the number and value of the pieces, and the peculiar efficacy of the shot and shell, but also in the use of the guns. No such achievements have been accomplished in Europe as by Gilmore at Charleston and Fort Pulaski. In the department of logistics, or the providing for, care and transportation of an army, we may safely challenge a comparison with any Power in the world. Our arrangements are not surpassed by any, and they are equaled by very few. Thus the great civil war has been educating the nation up to the highest standard known to military art, and preparing the republic for any evil day which may hereafter befall her. Taking the military system of the United States as it is at the present time, it may be regarded as worthy of the nation and the age, and the proof of its excellence is afforded by the results it has achieved against armies as well led and composed of as brave men as any of modern times. Perhaps the best proof of the excellence of our military system is seen in the fact that the military power of the rebels is derived from the training of the rebel generals at our own schools and in our own armies. Yet the schools which produced these able rebels have also produced the men who could beat them.—*Philadelphia North American.*

How Columbus Looked.—The personal appearance of Columbus was not a bad index of his character. His general air expressed the authority which he knew so well how to exercise. His light grey eyes kindled easily at subjects of interest. He was tall and well made. His complexion was fair and freckled, and inclined to ruddy. Trouble soon turned his light hair grey, and at thirty years of age it was quite white. Moderate in food and simple in dress, temperate in language, bearing himself with courteous and gentle gravity, religious without being a formalist, repressing his irritable temper with a lofty piety, he was the model of a Christian gentleman. The devout reference of his successes to Divine favor, with which he concludes the report of his first voyage to the sovereigns of Castile, is highly characteristic of the man.—*Once a Week.*

The ladies of Austin, the young metropolis of the Reese River mines, between Salt Lake and Carson Valley, recently raised $950, through the medium of a ball, for the erection of a public school house, at that place.

A new stern-wheel steamer was launched in Stockton on Saturday last. The *Independent* says "she is all that can be required of the kind, and is the strongest and heaviest framed stern-wheel boat ever built in California, if not in all America."

The drouth is so severely felt in the town of Mariposa, that nearly all the wells have dried up, and the *Gazette* says should a fire break out in the busiuess street, there would be no water available to extinguish or check it.

The pitch gatherers of Butte are rejoicing over the fact that the price of their commodity is advancing.

New Era Copper Mining Company, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 23d day of August, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company, payable on the 20th day of September, 1864, in United States Gold Coin, to the Secretary, at his office, on the southwest corner of Washington and Stockton streets, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 10th day of October, 1864, to pay the delinquent assessment, together with costs of Advertising and expenses of the Sale. By order of the Board of Trustees.

C. B. TOWLE, Secretary.

Office, southwest corner Washington and Stockton streets, San Francisco. 9-4t

MECHANICS' FAIR, DAILY PRESS.

A FREE DISTRIBUTION AND IMMENSE CIRCULATION!

DEWEY & CO., Publishers.

THE PROPRIETORS OF THE MINING AND SCIENTIFIC PRESS, having been granted the publication of the above daily, at the Mechanics' Industrial Fair Pavilion, will print the *largest and most extensively circulated* "Fair Paper" yet issued in this State. Every lady, gentleman and child visiting the Pavilion will be supplied with copies for themselves and absent friends as the sheets are issued from the press. It will prove a valuable record and illustration of the Grand Industrial Exhibition of 1864; its columns will reflect every event and incident of general interest transpiring each day during the Fair, and many copies will be preserved and bound by exhibitors and others. Inventors and Patentees having articles deserving of illustration, should make arrangements to have their engravings prepared at once.

☞ A limited number of advertisements will be received for insertion in the DAILY PRESS, thereby presenting a rare and valuable opportunity to advertisers.

Application should be made early to

DEWEY & CO.,
Publishers and Patent Agents,
Office of the Mining and Scientific Press, Nos. 14, 56 and 57 Government House, Corner Washington and Sansome Sts.

To Mexican Mining Companies.

A person in every way qualified desires a situation as Superintendent for some Company working in Mexico. Is a first class Assayer and Metallurgist and can give the best of references. Address, Mexico, Lock Box 2113 P. O. San Francisco. *9-3t

BOOKKEEPING.

YOUNG MEN CAN ACQUIRE A COMPLETE BUSINESS Education by taking a course of Bookkeeping and Commercial Calculations at the Counting rooms of Prof. Lary, 305 Montgomery Street. The course of study prescribed for his students is more extensive and thorough than any other in the city. Penmanship taught on the Spencerian system. Charges reasonable. 7-2m

Caution.—The public are hereby cautioned against negotiating for the following described Certificates of Stock of the Imperial Gold and Silver Mining Company, as the same were sold for delinquent assessments, on the 12th day of August, 1864, and will not be transferred on the books of the company:

Nos. 6, 10, 11, 12, 13, 14, 33, 34, 35, 47, 48, 66, 67, 68, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 86, 87, 88, 89, 90 95, 96, 107, 108, 17, 18, 19, 20, 21, 22, 52 53, 54, 55, 56, 57, 63, 30, 32, 123.

L. B. WOOSTER, Secretary.

Office, No. 410 Montgomery street. 7-2t

Enlargement.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

Owens River.—News from the Owens River country says the *Union*, is somewhat encouraging. A gentleman just returned from Bend City, says that some very rich discoveries have been made in that vicinity within the past week. He says that several leads of immense richness were found a few miles below Bend City, the rock from which is now being crushed in hand-mortars. One piece weighing a ponnd yielded ten dollars in gold. Teams had been crossing the leads for mouths, the drivers all the time ignorant of the wealth beneath them. The leads are not large, hut the quantity of metal contained in them is sufficient to warrant their speedy developmeut. On making these important discoveries the owners immediately eommenced the construetion of eight or ten arastras, by means of which they expect to extract large amounts of bullion. A furuace is also being huilt for smelting purposes. The Union mill is now running regularly. One of the hest mills has stopped runniug for want of a competent amalgamator. The proprietors are adding five more stamps to the original number, and when the new amalgamator, for whieh they have sent to San Francisco, arrives, the mill will, it is believed, he in good running order, and ready to resume operations under more favorable auspiees. Our informant says there is an ahundanee of grass in the valleys and meadows of the eountry, in many places over two feet in hight.

The Most Successful Copper Mine in Europe.—The twentieth annual report of Devon Great Consols Mines has just been issued, from whieh we learn that, with an origiual outlay of 1,024*l.*—1*l.* per 1,024 shares, into which the miue was divided—the quantity of copper ore returned during the twenty years' working amounts to 397,396 tons, which realized 2,345,993*l.* Of this there had been paid in dividends 912,384*l.*, or nearly 900*l.* per share; for an original outlay of 1*l.* The greatest quantity of ore returned in one year was in 1857, when 28,836 tons were returned, in whieh year also the greatest amount of money was realized, reaching. 159,432*l.* The largest amount paid in dividends in one year was in 1846, when 72,704*l.* were divided. During the past year 26,834 tons of ore were sold, realiziug 130,175*l.* The amount paid in dividends was 56,320*l.* beiug 55*l.* per share. The ore reserves in the mines are estimated at 72,171 tons, which, at the average price realised by the ores sold during the past year, would give a money value of over 350,000*l.* The other available assets—consisting of maehinery, plant, securities, money at eall, hills receivahle, and eash in hand amount to 122,000*l.* With regard to the future of the mines, the report states that, considering the general appearance of the various workiugs, and the immense stock of ore in reserve, prospeets have never at any time during the twenty years of their working looked more encouraging than they do at present.

Paper is now made of the eoarsest material, even hay and bramble. It only requires to he machined to become good printing paper. It takes a ton and a quarter of the best cotton rags to make a ton of pulp, and these rags cost from $125 to 175 per ton. Two tons of eoarse hay, eosting from $20 to $25, make one ton of pulp. Twenty dollars would pay for the ehemicals and twenty-five for labor, eoal, etc. A ton of paper thus made would stand at a little over $60, saving 50 per eent.

Nova Scotia.—The Nova Scotia Land and Gold Crushing and Amalgamating Company have received glowing accounts from their managing director, which state that the report from Oldham, although brief, is highly satisfactory. The specimeus sent by last mail from the Hall elaims are poor compared with the ore now heing raised. The lead is still very small, hut it has hecome regular in its eourse aud underlie, and is very rich.

Admiral Farragut.—This illustrious naval hero, who has just performed the good work of taking the forts which defended Mobile, and destroying the rebel fleet in that harbor, is now near seventy years of age. He is a native of Tennessee, entered the navy from that State, and has beeu fifty-three years in the service, twenty-four of whieh were spent at sea, and eighteen on shore duty. He is the naval h·ro of this age, whose noble example will be in future times worth more to the navy than many ships and guns.

A Sinoular Explosion occurred in Marysville on Friday last. The *Express* says: "At last the mystery was solved. An empty whisky cask, closed air-tight, which had been lying exposed to the sun on Maiden Lane, just above Third street, exploded hy the foree of the gas within it, throwing the head some two hundred yards. A large erowd assembled around the fragments of the eask, and various were the opinions of scientifie gentlemen as to what was the eause of the explosiou.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

aug17-tf Masonic Temple, No. 6, Post Street.

Bread Making—A most proper and praiseworthy innovation has recently been introduced into the public schools of Buffalo, N. Y. The matter of making bread has been so far popularized in the Central School of that city, that a bread bowl was among the prizes offered to the young ladies of the junior class at the closing exercises of the school recently held. Prizes were or should also have been offered to the young lady pupils for the best loaves of bread of their own making.

An apple tree in the garden of Dr. Kingman, in North Bridgewater, Massachusetts, according to an eastern exchange, has lately produced a beautiful white rose, perfect in development and fragrance, but on the stem the leaves appeared to be a union of the qualities of the rose and apple leaf. This curious phenomenon appeared about half way between the time of apple and rose blossoms.

Bitten by a Rattlesnake.—On Friday, the 12th inst., as Mr. Charles Smith was riding from Pine Nut to Genoa, says the Esmeralda *Union*, his horse trod upon a rattlesnake, which bit him on the fore leg. He rode on to Teasdale's ranch, about one mile distant, by which time the horse's leg was greatly swollen. He cut out the bitten part and promptly applied indigo, tobacco and salt, mixed with whisky—also two bottles of whisky inwardly, the first not taking effect. In about six hours the horse was so relieved as to be able to walk home, and has since recovered.

Animals living upon the mountains are found to have much larger lungs than those living in the valleys. In the city of Mexico, which is several thousand feet above the level of the sea, consumption and pulmonary complaints are never found unless taken there; the air being much lighter, requires larger and much better developed lungs in such places than in valleys, where they are contracted by the weight of the atmosphere, which is equal to fifteen pounds to every square inch of the body, because it is equal in all directions.

An Incident.—A singular scene is described in one of the English papers: Some cotton has lately been imported into Farringdon, where the mills have been closed for a considerable time. The people, who were previously in the greatest distress, went out to meet the cotton. The women wept over the bales and kissed them, and finally sung the doxology over the welcome importation. Imagine cotton becoming poetical, and people spontaneously raising a *Te Deum* because asked once more to toil!

Mortality among Cattle.—From causes which we have not heard explained, says the Napa *Register*, cattle have been dying here very fast, of late. Milch cows, which one day were apparently healthy, have been found dead the next. The same result has been frequent in Sacramento among horses though we have not heard of any deaths among the latter in Napa. It is thought there that certain kinds of food was the cause, yet horses have been known to drop dead, miles from any stable, while traveling on the road.

It should be known that a small quantity of vinegar will generally destroy immediately any insect that may find its way into the stomach; and a little salad oil will kill any insect that may enter the ear.

Office, 57 Government House, corner Washington and San some streets, San Francisco.

A GREAT INDUSTRIAL FAIR!
—TO BE—
Opened in San Francisco,
—ON THE—
30TH OF AUGUST, 1864.

The Mechanics' Institute of San Francisco are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and put forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill. The successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their quantities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the practical merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charges, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

JOSEPH BRITTON,	A. S. HALLIDIE.

MECHANICS' INSTITUTE.
INDUSTRIAL EXHIBITION, '64.
NOTICE TO EXHIBITORS,

The Executive Committee will be prepared at the Pavilion, on Union Square, to receive Goods intended for Exhibition on the Twenty-Second of August, and none will be admitted after the 31st of August.
By order of the Committee.
C. B. PORTER.

THE WORLD'S HORSE FAIR!
AT SAN FRANCISCO,
—AND—
Ladies' and Gentlemen's
Equestrienne Exhibition!

THIS GRAND EXHIBITION WILL be held at the BAY VIEW PARK, commencing September Second and continuing until the Eleventh, during which time the Mechanics' Fair will also be in progress—the Great Pavilion of which will be open every evening—so that persons from a distance can attend both Fairs during their visit to the City. For particulars and Premium List see large posters and California Spirit of the Times.
BEN. E. HARRIS, Secretary.
7-td

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs, Wallace, Allen & Hardyngo. Terms of subscription: One year, by mail, $10; six months, $6. It contains the Latest Mining, Commercial, and General News up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable strangers to bring their notices before the Public.
W. H. TOBEY,
Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

SAN FRANCISCO FOUNDRY
And Machine Works,
Corner Fremont and Mission streets,
SAN FRANCISCO.

All kinds of Machinery made to order on the most reasonable terms. Steam engines, high and low pressure, Quartz Mills, Saw Mills, Mining Pumps, Hoisting Machinery for mining purposes, Agricultural implements, etc., etc. Castings, of all descriptions, made to order. Also, WINE, CIDER AND TOBACCO PRESSES, of the latest improved patterns.
☞ Steam Engines constantly on hand.
Brodie's Improved Patent Wind Blast Separator for Dry Crushing, Manufactured here.
☞ REPAIRING promptly attended to.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filing out Assessment Notices and Delinquent Sales, supplied free to advertisers in the Mining and Scientific Press on application at the office.

New Volume.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent*.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feclit our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Suudays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two wecks previous to the day of sale, the first publication in the weekly bcing at least fourteen days prior to the day of sale.

By the above extract it will be clearly scen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Lost!

Certificate No. 191, of 150 shares, of the Tablo Mountain Copper Mining Company's Stock, standing in the name of N. B. Edmiston. All persons nre cautioned against negotiating for the same, as transfer has been stopped.

M. G. ELMORE, Secretary,
San Francisco, August 25, 1864. [9] T. M. Cop. M. Co.

READY ROOFING

READY TO NAIL DOWN.

READY ROOFING
At less than half the cost of tin roofs.

READY ROOFING
More durable than Tin.

READY ROOFING
Suitable for steep or flat roofs.

READY ROOFING
For all kinds of buildings, in all climates.

READY ROOFING
Easily, cheaply, and quickly put on. Needs no coating over with cement after it is nailed down.

READY ROOFING
Made of a strong woven fabric, thoroughly saturated and covered upon both surfaces with a perfectly water-proof composition, and put up in rolls ready for use—40 inch wide, and 75 foot long.

WE ALSO MANUFACTURE
Liquid Cement,
FOR LEAKY TIN ROOFS.
Much cheaper and more durable thau oil paiat. Also,

Compound Cement,
For Leaky Shingle Roofs,
Which will often save the cost of a new roof.

Samples of Ready Roofing and Circulars sent by mail when desired. Favorable terms made with responsible parties who buy to sell again.

READY ROOFING CO.,
6-tf 73 Maiden Lane, N. Y.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJUSTING WRINGer. No wood-work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $6.50. No. 1, $7.50. No. E. $8.50. No. A. $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,

No 13 Platt Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb-Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the best Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST Putnam's Wringer. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co:—

GENTLEMEN. I know from practical experience that Iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use.

Respectfully yours,
JNO. W. WHEELER, Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.

New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultation and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or incorrect decision. Against none of these contingencies does the Preliminary Examination previde; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Cavent is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a cavent is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the cavent, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the cavcat system—the expense under the law being comparatively small.

To enable us to prepare cnveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States, upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further ngency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons prescnted to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications filed in our office, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the nventor should be engraved or painted in it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instillment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be prescuted to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, paints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso rellevo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 y'rs and 5 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injine tion from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionato to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS
Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

Disney's Cylinder Amalgamator,

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

San Francisco, June 23, 1864. 1-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to any thing now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

se[21

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the talneral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zophyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS, NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to HUNGERFORD & PRATER, Proprietors.

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume,

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)	$5.00
Six Months, (one volume)	3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

And, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices herein before provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

New this Week.

Great Western Gold and Silver Mining Company, Keyes District, Mono County, California.

Notice is hereby given that at a meeting of the Board of Trustees said Company, held on the 19th day of August, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 10th day of September, 1864, in United States gold or silver coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 8th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

BROCK JOHNSON, Secretary.

Office, No. 28 Government House, San Francisco. 9-4t

General Jackson Gold and Silver Mining Company, Devil's Gate District, Lyon County, N. T.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 23d day of August, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company, payable on the 27th day of August, 1864, in United States gold coin, to the Secretary, at the office of the company, or to PETER BROWN, Silver City, N. T.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 8th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

C. W. HAYDEN, Secretary.

Office, No. 625 Clay street, San Francisco. 9-4t

Office, 55 & 56 Exchange Building, northwest corner of Montgomery and Washington streets, San Francisco, 6-4t

Important to Californians.—Many inventors lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

La Travlata Gold and Silver Mining Company, Calaveras County, California.

And in accordance with law and an order of the Board of Trustees made on the aforesaid dates, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the Companies, 305 Montgomery street, San Francisco, on Thursday, the 15th day of Sept. 1864, at 11 o'clock, A. M. of said day, to pay said delinquent assessments thereon, together with the cost of advertising and expenses of sale.

San Francisco, Aug. 6th, 1864. J. S. LUTY, Sec'y.

7-4t Office, 305 Montgomery Street.

Sierra Nevada Gold Quartz Mining Company, Alleghany, Sierra County, Cal.

Notice is hereby given, that at a Meeting of the Board of Trustees of said Company, held on the 3d day of August, 1864, an assessment of fifty cents per share was levied upon the capital stock of said Company, payable on the 6th day of August, 1864, in United States Gold Coin, to the Secretary.

Any Stock upon which said Assessment shall remain unpaid on Saturday, the 3d day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of September, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. A. RUST, Secretary.

Office, 212 California street, San Francisco. 6-4t

Stennbont Silver Mining Company, Sierra District, Humboldt County, N. T.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 4th day of August, 1864, an assessment of one dollar per share was levied upon the capital stock of said company, payable on the 5th day of August, 1864, in United States gold coin to the Secretary, at the office of the Company, or to JAS. T. MACLEAN, Superintendent at the mines.

Any stock upon which said assessment shall remain unpaid on Saturday the 10th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 26th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. S. O. PUTNAM, Secretary.

Office, N. E. cor. Jackson & Front streets, up stairs, San Francisco. 7-4t

Salamander Gold and Silver Mining Company, Mill Valley District, Calaveras County, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of ten cents per share was levied upon the assessable capital stock of said Company, one-half payable on the 16th day of August, 1864, in United States coin, to the Secretary of said company, and the balance payable in thirty days from said 16th day of August.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 4th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

F. D. OALLAOHER, Secretary.

Office, No. 35 Metropolitan Block. 8-4t

San Francisco Moss Ledge Company, San Francisco District, A. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 16th day of August, 1864, in United States Coin, to the Secretary, at his office, No. 618 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 28th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, SEPTEMBER 3, 1864.

VOLUME IX. Number 10.

Opening Address at THE MECHANICS' INDUSTRIAL FAIR.

Delivered by Hon. John Conness, at Platt's Hall, Friday Evening, September 2d, 1864.

Mr. President, Ladies and Gentlemen:—In one of the last public declarations of Sir Robert Peel, he expressed the opinion that England owed to her mechanical industry the power with which she had passed through the wars of half a century—" that furnished her exchequer, that sustained her credit, floated her triumphant navies, and placed, for a time, in her hands the trident of the seas." The history of mankind proves that the foremost races of men, those who have controlled the civilized world, and who became great and prosperous, and impressed their ideas, habits, and civilization upon other races and peoples, were only foremost, great, and prosperous, because a large proportion of their people were engaged in agriculture and the mechanic arts. The people of the loyal States have for three years sustained a war for the restoration of the Union, unparalleled in its magnitude, and at a cost which seems fabulous; yet the statistics from the census prove that the total cost of the war, as exhibited by the public debt on the first of the present month, could be paid from the profits on agriculture and increased mechanical productions, as shown in the increase of wealth during the decade from eighteen hundred and fifty to eighteen hundred and sixty, and still leave a balance for the prosecution of the war for six more years at the same rate of cost; and then the people of the loyal States would in the aggregate be as wealthy as they were the year California was admitted into the Union.

I call your attention to these facts that we may the better appreciate the part we, as a portion of a great Nation, are performing, and the progress we are making in agriculture, and in new and improved mechanical productions, as exhibited under the auspices of the society which has called us together. With the intelligent and educated farmer and mechanic appropriations seasons and the disarrangements consequent upon war seem to act but as incentives to renewed exertions for the invention of labor-saving machinery and the profitable exercise of industry in new channels.

The clouds of winter withheld their necessary and nourishing rains, and the harvest of gold and grain is light, but men's thoughts have been turned to new means to lessen the expense of plowing, planting, gathering, and cleaning their crops, and the product is before you in the wonderful machinery on exhibition. Wild speculation and sudden haste to be rich, incompetent and extravagant superintendence, fictitious companies, and fraudulent stock, have depressed the mining interests of our State, yet the inventive, practical mechanic and miner have been at work in the discovery of improved applications of motive power; new processes for the saving of labor in driving tunnels and sinking shafts, in new pumps for the draining of mines, in new modes for the reduction of ores, and new processes for separating the precious metals from their obdurate matrices.

In the loyal States directly affected by the war, it was supposed there would be depression of business, stagnation of industry, and cessation of invention; the reverse is the fact. With the exception of the manufacture of cotton—which is depressed from the lack of material—almost all others are more prosperous than before the war. A recent intelligent writer, in commenting upon the fact that there were issued from the Patent Office, from the first to the tenth of May of the present year, two hundred and eighteen patents, re-issues, and designs, says: "Save in cotton manufacture, there is hardly one other that is not busier than it has been in years gone by. Iron is in such demand that producers of it command their own prices; paper is the same; woollen goods are the same; wearing apparel of every sort is costly; and this, in spite of all that inventors are doing to reduce the price, by making more of it in less time than was formerly required. The progress of invention during the war has been steadily increasing, and it is difficult to tell what the consequences would have been to the Nation had not the people lent their inventive skill in the hour of trial. Without the *Monitor* we should have been overwhelmed by the *Merrimac*; without the shot and shell of Stafford, Parrot, Sawyer, Shenkl, James, Hotchkiss, and others, we should have suffered many a defeat; without Sharp's rifle, the Burnside breach-loader, the Spencer and Henry repeating rifles, the efficiency of our arms would have been seriously impaired," and the crowning glory of the recent contest, by which the pirate ship *Alabama* met a pirate's fate, was in the superiority of the Dahlgren over the Blakeley gun. The fact that so many men have been called from agricultural and mechanical pursuits to the direct service of the country, has compelled the invention and adoption of labor-saving machinery.

The Commissioner of Patents, in his report for eighteen hundred and sixty-three, in commenting upon the increased activity in the invention of agricultural machinery consequent upon the withdrawal of men from the pursuits of peaceful labor, says that he learns from reliable sources that there were manufactured in the loyal States during that year upwards of forty thousand harvesters, while the number in process of manufacture required for the harvest of the present year is estimated at over ninety thousand machines. He adds: "Machines for thrashing and cleaning grain have received a large share of attention, and have been rendered so complete that the grain is now thrashed, cleaned, measured, bagged, and the straw sacked at one operation. Improvements have also been made in the machines by which the dust is taken up and conveyed away, and also by which the bands are cut and the sheaves fed into the thrasher. Indeed, throughout the entire class of agricultural machinery, there appears to be an increased activity in the effort to substitute labor-saving machinery for manual labor, and with beneficial results." The exhibition of the invention and skill of the farmers, mechanics, and miners of California, which to-day has been collected together in this great city, will prove that our State is not behind her loyal sisters in all that shows studious thought and skillful labor. Who that landed on these shores fifteen years ago, and saw scattered through the State the evidences of a pastoral civilization—which, existing for two hundred years, had made no advance in agriculture or mechanics—would have dared predict this great city, its foundries, machine shops, woollen mills and other manufactures, its opulent commerce; and, enlarging the view, the broad acres of agricultural productions, the vineyards and orchards, the quartz and lumber mills, and the thousands of miles of mining canals? All these are the product of skilled and intelligent labor, and the men who have produced them may well feel a just pride in their work.

It has been well said, that the dignity of labor is in its results, and not in the form of employment. While we may feel a just pride at the progress we have made, it should not be forgotten that we started in agriculture and mechanics at the highest point which others had attained. We had among us intelligent and educated men of all the civilized nations. We had the benefit of all the knowledge and experience of our own and other peoples. We found a new country, and contact and interchange of thought with men of all sections and various systems of education, tended to release the mind from the fetters of old restraint and prejudice, and the conservatism of conventional custom, and our farmers and mechanics were ready to adopt all that was new, provided it was good and accomplished the purpose intended. If the most sanguine pioneer would have been considered insane had he predicted the evidences of progress, prosperity and wealth, which are displayed before you today, who would dare to foretell what inventions, what improvements in machinery, what evidences of progress in agriculture, what specimens of varied manufacture, will be gathered for exhibition in this city, when fifteen more years have passed away? I believe, when that time shall have arrived, California will be known as a manufacturing as well as an agricultural and mining State. We have all the facilities to make us a manufacturing people. We have coal in our hills, waterfalls and wood on our mountains, iron and other ores in abundance, and unsurpassed agricultural facilities. We are advantageously situated to control the commerce of the northern Pacific, and to supply the people who will soon fill the country on the north and south of us. We have a climate which seems more nearly adapted for the healthful labor of man than any other on the earth; our system of law opposes monopolies, and gives the greatest freedom and security to individual enterprise. The discovery of the precious metals in the interior of the continent, at various places beyond our eastern border, is attracting a population which will become permanent, and whose manufactured articles of consumption can only come from this State, when the Pacific Railroad, which our wise Government is doing so much to build and foster, shall have crossed the Sierra Nevada. We are situated at so great a distance from the manufacturing centres of the world, that the cost of transportation is equivalent to a profit. The necessities of the country growing out of the cost of the war, compel a tariff which prudent legislation will not materially reduce, and which offers inducements for the investment of capital in manufactures. In the estimates of the income of the country for the present year, the receipts at the Custom House in this city were placed at eight millions of dollars. While we cannot but be pleased that we are paying so much toward the support of our Government, we should remember that at least one-third of this sum is paid as a tax on articles which in a few years will be produced and manufactured in this State. In this connection let me direct attention to the recent legislation by Congress, by which high specific duties are imposed upon the wines and brandies of foreign countries, while like products of our own favored State are nearly exempt from burden; the necessary and inevitable result of which must be that we shall soon furnish a bountiful supply of these valuable products for the consumption of our own country as well as for exportation. The necessities of our position, the laws of trade, and the habits and education of our people, all tend to make California a manufacturing State. Observation and reflection have taught me that the most depressing influence on our progress is the unsettled condition of our land titles. Agriculture is the foundation of civilized society, and successful agriculture is based upon the peaceable ownership and possession of the soil cultivated. It seems impossible that even with the law's slow delays, many more years can pass before the title to our lands will be finally determined, and these lands be subdivided and sold by the claimants by the Government, to the people who will occupy and cultivate them.

I believe, also, that the time has arrived when the prosperity of the State demands that the miner should be the owner in fee simple of his claim. He is at present but a trespasser, working, it is true, by the cheerful consent of the Government; but still a trespasser, liable to unfriendly legislation (not that legislation is intended to be unfriendly,) but it seems impossible that his position and wants can be understood, except by direct observation and association.

I believe that the laws and customs adopted by our mining population for the settlement of the rights of possession and occupancy should be confirmed by Congressional legislation, and a law be passed providing for the sale of the mineral lands to the persons who, under our laws, have the right of possession. This done, our mountains will have a permanent population, mining will be conducted as a business by system and order, capital will seek investment in mining enterprises, school houses, farm houses, and churches will take the place of the log cabin and the tent, and we shall have a steady, industrious people, whose wants and necessities will keep busy our foundries, machine shops, and factories. The society whose exhibition is to-day opened to the public, is peculiarly under the direction and control of mechanics; it is the product of their thought, the reflex of their intelligence, which is to excite our admiration. Although it must be conceded that agriculture is the basis of the whole superstructure, I feel a direct interest in the working mechanic, his modes of thought, his habits and associations, the position he occupies as a member of society, and the influence he can exert in the advancement of civilization.

I know what it is to give my daily toil for years in the acquisition of a mechanic's trade. I know what it is to fill every position from apprentice to foreman. I know the conditions that almost separate the mechanic from general society. The demands of occupation are peculiarly exacting upon him. The competitions of productive industry account for this exaction, which, to a certain extent, separates him from intercourse with society. The master mechanic, attuned by early habit to these exactions and demands, pursues his calling too often to the neglect of enjoyments and other duties. The operative mechanic, worn by daily toil, seeks rest and recuperation in the intervening hours not occupied by labor. His opportunities for intercourse with friends and neighbors are few. In this way society often becomes classified by force of circumstances and the demands of the laborious and useful professions. Vain men and women sometimes attempt classification, based solely upon wealth and the assumed respectability of idleness; but in a Government like ours all such attempts must fail. The poor of to-day represent the wealth of to-morrow; and thus, so far as wealth and its advantages are concerned, an equalization is continually going on, which never fails in its effect. The man or woman who has most intelligence, most energy, the deepest love of humanity, and applies these great gifts and qualities to the most useful purposes, becomes, in our time, the greatest hero or heroine, and the most peerless ornament. Such may not be suddenly acknowledged; but let none fear their legitimacy of empire, for God has ordered that they shall reign and rule in the moral kingdom. Now, try the mechanic by this great test. Trace him out, who, in the stillness of the midnight hour is engaged in the closest analysis, and calculations of the laws that govern the application of force to matter, the result of whose labor is to astonish the world again by an increase of its productive industry, by immense additions to its wealth, and a more bountiful supply for human wants. Observe him who, day by day, dexterously plies the implements of his trade, satisfied with his slender earnings, and applying them to the relief of family and kindred, but ever looking upward and onward to the goal that his manhood marks as his proper station. Who can question his elevation and superiority? It is a mistake, if not a crime, to discriminate too severely against those of our race who are not endowed with equal intellect and intelligence with ourselves. It would be a strange society where all the members were equally intelligent, equally moral, and equally adapted to the highest grade of human refinement and elevation. The office of reformer and philanthropist would be gone, and precept and example would alike be lost. Although we all have an ideal standard, yet its universal attainment would seem to be impracticable, if not impossible; and we are brought back to the conviction that One wiser than we has beneficently arranged the elements that go to make up human society.

What are called the polished members of society are rarely known in its great conflicts, out of which are evolved radical changes that strike at its lowest foundations. The great conflict now going on in our country between those who would rule or ruin, and those who would and will preserve the work of the great fathers, is maintained for the most part by the uneducated and laboring masses of our population.

When Burnside's column left Annapolis for the Rappahannock, last spring, I saw the brave fellows who composed it pass through the National Capital. I made it my business to observe them closely in this connection. The bronzed face of the Caucasian and the black face of the Ethiopian together made up that human tide which, with measured flow, went down to death for liberty! That great column was not, of course, without rare intelligence, but it also contained the untutored, unselfish men—the rough, unhewn virtue of our Nation—and I thanked God that all were not sufficiently refined to remain at homes of ease and affluence while country, humanity, liberty and law demanded human sacrifice.

I do not wish to be understood as undervaluing education, for on the contrary I believe that without it there can be no progress, no advancement, no permanent security for civil liberty. No part of our population has so great an interest in maintaining public common school education as the mechanic. While all the years from youth to manhood are generally appropriated to education by the affluent, the education of the children who are to enter upon mechanic trades must be completed at a much earlier period. The base must thus be laid in early youth upon which in later years, during hours often stolen from sleep, the superstructure is to be built which is to culminate in an intelligent and useful after life. But no member of the community can release himself from the duty of providing the means of education for all. We are all of one family, and are all interested in the welfare of each other. The usefulness, the fame, and the greatness of any, belong equally to all. The strength, the power, the nobility of the greatest and best man belong to and inspire every other member of society. The poverty, the weakness, the disgrace of any, are equally distributed through the community. No man can absolve himself from this common bond and responsibility; to attempt it would be to isolate himself and become a voluntary outcast. Why do the people of our State open wide their purses, and send through the Christian and Sanitary Commissions their treasures, to the relief of men whom they never saw? They are impelled by the divine law of duty, and the common bond of humanity, and their own happiness is promoted by obedience to these demands. I invite, especially, the attention and efforts of mechanics to every step proposed in the direction of universal education. The benefits to society from education are marvelous already. We often hear persons who have a habit of condemning their own age as inferior to the past, complain that we now have no great minds—no great intellects; in fact, they assert that the race of mental giants has passed away, and we have pigmies in their stead. I do not hesitate to say that we have now more genius, more intellect, more real greatness, engaged in the production of labor-saving machinery alone, than any past age can be shown to have had engaged in all capacities put together.

It is not, however, in this line only that this age excels all others. The merchant of a half century since would be astonished if he were launched upon the market of to-day. It is no longer a great venture to send ships to sea; their time can be calculated, and the condition of trade at their destination be known. The great merchant of the past would cut no figure in the commerce of our time.

In the curative art, the whole practice has been changed, and human ills are alleviated or removed with almost unerring success.

The pulpit is liberalized, and no man thinks of holding his neighbor up to a particular standard of belief. The seats use reason and generosity in larger quantities, and all are becoming friends. The grasp of the statesman is wider than it was—it now takes in all humanity, and proposes a greater extension of human rights everywhere. It is, in this connection, a noticeable fact, that even where—as in the case of Louis Napoleon—wrong is contemplated, it is predicated upon the improvement of the general condition of the victims. All society is becoming humanized and elevated.

The general diffusion of education has so enlarged man's capacities, that to be distinguished is no longer a distinction. The average is so much higher that we are deceived by the standpoint from which we look. All this, and much more, is due to the extension of common school education during the past half century, and gives us splendid promise for the future, if we but do our duty.

To those of us who came to these shores on the discovery of gold, half the average life of man has passed away. To us it was a strange land; to the next generation it will be the native land. The pride we feel in its progress, its prosperity, its advance in all that goes to make a higher civilization, will be theirs by birth and inheritance. Born to love their country, if we perform our duty to them, they will advance its growth to greatness. Under the guardianship of the Almighty, I think the time is near when the supremacy of the National Government, and the justice of its rule, will be acknowledged throughout the whole land. Through bloody war and all its horrors, by loss of friends and relatives, and by homes made desolate, God has taught this people the virtue of patriotism and the value of free labor. In the peaceful years to come, that are left to us, let our children be also taught these deep lessons, and let us not forget to impress upon them the dignity and true nobleness of labor, so that, when we shall have passed away, they will be the leaders in organizing the grand future of humanity—the legitimate product of education, religion, and liberty.

THE MARIPOSA ESTATE.—A report has been laid upon our table, of an examination of the Mariposa Estate, made in May last, by Professor Benjamin Silliman, Jr. The professor spent nearly two weeks upon the estate, studying its geological and mineralogical aspects. His impressions are recorded in the report as follows:—

"The whole impression made on the geological observer—an impression which every day's experience seems to deepen—is of the favorable geologic conditions for the occurence of gold; of the boundless and hitherto very imperfectly developed resources in quartz. It is, indeed, only after riding by unfrequented paths to secluded ravines and rugged hill sides, that the observer can arrive at a full impression on this subject; but a general review of the estate from end to end suffices to convince even the casual observer that he is upon one of the most favored districts yet discovered. It is difficult at first to take in the scope of the property as a whole, for it is more a Principality than an estate, with its area of seventy square miles; its varied scenery, numerous villages, and mingled population of Americans, Mexicans, and Chinese,—amounting to near seven thousand souls,—its herds of animals, and boundless range of hillside pasture, capable of supporting countless flocks,—the whole scene is one of singularly picturesque beauty, and to one fond of the study of the varied aspects of nature, well calculated to arouse enthusiasm in spite of those climatic conditions which deprive it for so many months of water, but give in return cloudless skies and vast capacity, with irrigation, for any description of temperate or semi-tropical cultivation."

The Report comprises a pamphlet of thirty-three pages, in which a full description of the various mines and mills upon the estate are given, together with their history and prospects in brief.

A RICH CLEAN UP.—A few days ago Messrs. William Watt & Co., of the Rocky Bar claims, near Grass Valley, cleaned up, after a two weeks' run at their mills, fifteen hundred ounces of pure gold, worth $17.50 per ounce.

PAUL TORQUET'S WILL.—The will of Paul Torquet was admitted to probate yesterday, upon the application of his wife, Sophia Torquet, John Melville, and Richard Ivers. The estate is supposed to be worth between twenty and twenty-five thousand dollars.

THE SECOND INDUSTRIAL EXHIBITION

would be held at the Institute Pavilion, commencing on Wednesday, September 1st, and continuing open fifteen days. The State Horticultural Society again joined with the Institute in holding *their* second exhibtion at the same time and place. The opening address on this occasion was delivered by Jas. A. Banks, Esq., and the closing address by Rev. A. H. Myers, of Alameda. The whole number of articles exhibited on this occasion was 682. The receipts of this second exhibition amounted to $15,541.50
Expenditures 13,569.43

Net balance $ 1,972.07

The list of members of the Institute, as published in the report of this second exhibition, numbers 452.

From this time until the summer of 1860, a period of nearly two years, the records of the Institute present no features of especial interest. The organization was conducted in a quiet unobtrusive manner, gradually increasing its library, and keeping up its membership. Much good was effected by the influence which the Association exerted over its membership and over the mechanical interest of the city generally. The benefits of the library were enjoyed by a large number of persons, mechanics and others, who were not enrolled as active members of the Institute.

Early in the spring of 1860, the proposition began to be discussed for holding a

THIRD INDUSTRIAL EXHIBITION.

This step was finally resolved upon, and an arrangement made with Mr. Lick for a new lease of his lot on Montgomery street, for the purpose of putting up another Pavilion, the old one in the meantime having been removed. This structure, a correct representation of which has been furnished by our engraver, and placed immediately under the view of that erected for the two previous exhibitions, was parallelogram in shape, occupying 150 feet on Montgomery street and extending 200 feet on Sutter. Its cost was $8,450. The Exhibition opened on the 3d of September, under quite flattering auspices. The opening address was pronounced by J. W. Cherry, Esq. Notwithstanding the hopes of success which attended the initiation of this Exhibition, though highly creditable to the skill and industry of the city and State, it was far from a pecuniary success. The receipts fell some two or three thousand dollars short of the expenses, and placed the Institute under quite embarrassing circumstances.

From this time until the fall of 1863, a little less than one year ago, the Institute was in a languishing condition—in debt and discouragement. In the spring its income had become reduced to $50 per month, *below expenses*, and the Association was actually considering whether it would be better to sell its library at public auction to pay its debts, and disband, rather than make another effort to recuperate and place itself once more in a condition to benefit itself and the community by an active existence. About this time the landlord's calls began to be pressing and the Institute received a pretty direct notice to vacate the building which it occupied. After several meetings of consultation, and under the influence of a few of the more energetic members, the Institute wisely resolved to keep up its organization, and to put forth its most determined energies to extend its usefulness and deserve a generous support from the public. Mr. Joseph Britton, the active and efficient President of the Association, was at once empowered to carry out a series of measures which he had himself suggested, to accomplish the desired end.

In the meantime the books and other effects of the Association were stored and the building on Montgomery street given up, while the President and other members of the Institute went energetically at the work before them. Numerous meetings were held; public sympathy was attracted to the efforts which the Association was making to help itself, and the result was soon made manifest in the elegant and convenient suit of rooms, now occupied by the Institute in a building belonging to itself and yielding a monthly rent of $100 in addition to the occupancy of the Association. The result has been very gratifying, not only to the parties most directly interested, but to the entire community as well. The lot and building, has cost the Institute $15,323, all of which, we believe, has been paid up, with the exception of $6,000, which is secured by a mortgage on the premises.

FIRST MEETING IN THE NEW BUILDING.

On the evening of October 28, 1863, the Institute met for the first time in their own building. The meeting was fully attended. On calling it to order, the President, made some appropriate remarks, congratulating the members on the work they had accomplished. The membership at that time was stated to be 550, the monthly dues for which reached $275, which together with $100 per month rent from the lower story of the building gave the Institute an income $375 per month. Energetic steps were taken at that meeting to still further increase the funds and income of the Institute, which have met with decided success. The propriety of holding a Fourth Industrial Exhibition was first suggested on this occasion.

At the close of the year a series of lectures was given which netted about $1000.

Upon re-opening the Institute in their present building, about 900 additional volumes were purchased for the library, and many others were gratuitously furnished by friends of the Institution. The library now contains about 7,000 well selected volumes, and the Reading Room is well stocked with a large number of useful and valuable periodicals, devoted to news, general miscellany and mechanics. The Institute as it now stands, is one of the proudest and most useful institutions for good on the Pacific Coast—the pride of our city, and an honor to her mechanics.

THE FOURTH EXHIBITION.

On the 19th of January, 1864, a meeting of the members was called with especial reference to considering the propriety of holding a Fair or Exhibition during the present autumn. After frequent meetings and much discussion, the plan for holding the proposed exhibition was fully matured. How successfully this plan has been carried out, let the noble edifice in which we are assembled today, with the tangible evidence of our skill and industry on every side speak for themselves.

HEROISM OF AN ENGINEER.—The Elmira (N. Y.) *Gazette* records the following act of sublime devotion to duty and of heroic self-abnegation: "The engineer on the train conveying prisoners to this place, when the collision was discovered to be unavoidable, with certain death staring him in the face, heroically remained at his post and reversed the engine, and was buried in the wreck. When found, his back was against the boiler, and he was literally burnt to death. He told those who came to his assistance to keep away from him for their own safety, as he feared the boiler would burst. Every exertion was made to save him, but without avail until life was extinct. His name was William Ingram."

AMONG the novelties recently introduced is a locomotive seat designed for those who work at gardening, etc., where their hands need to be employed on or near the ground. It consists of a malleable iron foot-piece or sandal, which can be easily fastened to the foot by suitable straps. An oblique standard, with a seat made of wood, sticks into the foot-piece at the heel, properly secured, thus making a convenient stool, which can be carried about with very little inconvenience.

ORIGIN OF BOOTS AND SHOES.—Boots are said to have been invented by the Carrans. They were at first made of leather, afterwards of brass and iron, and were proof against both cut and thrust. It was from this that Homer called the Greeks brazen footed. Formerly, in France, a great foot was much esteemed, and the length of the shoe in the fourteenth century was a mark of distinction. The shoes of a prince were two feet; those of a knight, eighteen inches long.

THE great Duke of Wellington constantly asserted that nothing was worse than a *little* war. There can be no success unless you are in earnest.

Action of Butter on Copper.

The following communication to *L'Union Pharmaceutique*, Paris, by E. Laucelot, we find in the Philadelphia *Journal of Pharmacy*, for which publication it was translated:

I take the opportunity of the Scientific Commission now meeting at the Vienna (France,) to communicate to my fellow-pharmacutists a fact which, I believe, is new to the science of chemistry, and may ultimately prove highly interesting as a question of hygiene and toxicology.

Some time ago, an inhabitant of our city had a copper hydrant put up in his yard. The inner part of the copper pipe had not been tinned, that precaution being commonly deemed superfluous.

The water supplied by this hydrant, for the usual wants of the household, had never been suspected of containing noxious matter; but, one day, the lady of the house told her husband that, having left a slice of butter for several days in the water drawn from the new hydrant, she found that the immersed surface of the butter had turned quite green.

Anxious to ascertain the cause of this singular alteration, the proprietor divided a pound of butter into three equal parts, and placed them separately in three different vessels. He then filled one of these with water taken from a wooden hydrant placed in his yard at some distance from that of copper; the second vessel was filled from the very well that supplied the copper pipe, but from the outside of that pipe; and the third vessel contained water that had passed through the copper pipe itself.

The butter deposited in the water of the third vessel was the only one which, after two days immersion, became covered with a bluish green color, exhibiting the aspect of an hydrate of deutoxide of copper.

The piece of colored butter was handed to me by the owner, with a request to experiment chemically upon it, so as to ascertain the true nature of this coloration.

A solution of hydro sulphuric acid applied to the butter, produced at once a blackish, dirty spot; and the ferro-hydrocynate of pottassa gave a crimson spot; the latter grew darker by degrees. These characteristic aspects left no doubt of the presence of copper.

Desirous of experimenting on the very water that had imparted such a color to the butter, and also of determining what proportion of copper it might contain, I requested the owner to send me a certain quantity of that water, especially that which would be the first drawn in the morning. He sent me about three gallons of it, one quart of which was tried by means of the above-mentioned reactives, and some well known others, but without any result.

The remaining eleven quarts were reduced by evaporation to a tumbler full. Having filtered that remnant, I tried the limpid liquor: no result. I next poured on the filter—now coated with a calcareous deposit—a few drops of a reagent: again without result. Finally I dissolved this deposit in nitric acid, and then neutralized the solution; but that was as unsuccessful as the other trials.

Now, what conclusions can be drawn from the above? Simply this; The butter may fix and reveal molecules of copper, so very minute, that they will evade the most sensitive reagents known. Another remark, is that none of the persons who had used this hydrant had ever experienced the slightest accident. Nevertheless, my experiments lead me to the following conclusion: That under certain circumstances—as, for instance, the washing of butter—water from copper hydrants may become deleterious, unless the pipes be tinned inside.

It has long been known that the acids contained in greasy substances will act promptly on copper; but the above experiment has demonstrated to me, that butter is perhaps the most sensitive reagent to detect the presence of that metal, or of its salts, in a liquid; and that, if iron has the property of reducing the salts of copper contained in a very diluted solution, butter itself possesses the property of forming a copper salt—perhaps a butyrate—which reveals the presence of that metal, even when the active reagents most in use have failed to give trace of its existence.

I leave to the masters of the science the care of completing these experiments, which are certainly not devoid of interest in a toxicological point of view.

COD LIVER OIL is neither more nor less than cod oil clarified; and, consequently, two thirds of its medicinal qualities are abstracted. Cod oil can be purchased pure at any wholesale oil warehouse, at about one-thirtieth of the price charged for the so-called cod liver oil. Many persons, who have used cod oil pure as imported, have found it to answer much better than the cod liver oil purchased of a druggist. The best vehicle for taking cod oil is new milk, and its disagreeable flavor can be easily covered by the addition of one drachm of oil of orange peel to every eight ounces of the oil.

SALTNESS OF THE SEA AS AFFECTING NAVIGATION.—Surprise has been expressed that vessels going to Sebastopool take a smaller cargo than if they were only going to Constantinople, or that they diminish their cargo in the latter port before entering the Black Sea. The reason is this—the density of water of different seas is more or less considerable, and the vessels sailing in them sink more or less according to their density. The density arises from the quantity of salt contained in the water; and consequently, the saltier the sea is, the less a vessel sinks in it. As, too, the more sail a vessel carries, the deeper she penetrates the water, it follows that the more salt the water the greater the quantity of sail that can be carried. Now, as the Black Sea is sixteen times less salt than the Mediterranean, a vessel which leaves Toulon or Marseilles for Sebastopol must take a smaller cargo than one that only goes to Constantinople, and a still smaller one if it is to enter the sea of Azoff, which is eighteen times less salt than the Mediterranean. The Mediterranean is twice as salt as the Atlantic; once more than the Adriatic, five times more than the Caspian Sea, twelve times more than the Iouian Sea and seventeen times more than the Sea of Marmora. The Dead Sea contains more salt than any other sea; it is asserted on good authority that two tons of its water yields 589 pounds of salt and magnesia.

A HANDY TOOL.—Holes in castings which are cored out, very often are required to be made true and smooth so that bolts will fit in them. Some machinists waste a great deal of time in plugging the holes up with wood and then drilling them out afterward; still others spoil rimmers and files in rimming or filing the said out; it is needless to tell the intelligent workman that all these methods are costly and tedious. A better way to accomplish the object is to make a steel pin, ground square on the face, and turned true in the lathe. It may be parallel for a short distance (so that it will go straight) and taper above so that it will clear; the length is made to suit the work to be done. This pin is to be driven right through the casting, half from one side and half from the other, or else the face of the casting will be injured. With such a tool as this ten times more work can be done than with a drill or any other method, while the quality of it is excellent. It is called a drift pin and may be made of any size.—*Scientific American.*

BAGS.—The whole world of organized beings is put into bags, and is made up of bags. If we examine our own bodies we find that every organ is placed in its appropriate sack, and each is formed of a series of sacks. The brain is surrounded by the pericranium, the heart by pericardium, each bone by the periosteum, and all of these are delicate membraneous bags. Each one of us, as well as each of the myriads of lower orders of animals that have appeared on the earth, commenced its existence as a simple sack or cell; and its growth proceeded by the addition of other cells. If we place a thin shaving of a bone, or a minute scrap of any organ under a microscope, we find that it is formed of multitudes of minute cells or bags. And finally the whole system is put into that perfect bag, the skin.

Bags also play a great part in civilization. The whole organization of society—with its commerce, manufactures and agriculture, its armies and navies, its churches and courts, its republics and monarchies, its opulence and its pauperism—all depends upon that little cloth bag—the pocket.

BRUSH FIBERS.—There is a great demand just now among basket makers for some strong supple fiber which may supplement the present supply of piassaba or *bass* received from Brazil. Two strong fibers, the produce of different palms have been for sometime received from the two ports of Para and Bahia. Of late less care has been given to the selection and preparation of these fibers in South America, and they are much mixed with waste and useless fiber. The piassaba fiber, and the so-called Mexican grass, the produce of the leaves of Agate, have quite revolutionized the brush trade by cheapening the cost and replacing bristles. Owing to the improvements in Russia, arising from attention to bacon and ham curing, bristles are less stout and plentiful than they used to be from wild hogs. The attention of residents in tropical regions may therefore be drawn with advantage to the demand for new fibers for brush-making, street-sweeping machines, and chimney-cleaning brushes.—Brushes have for some time been made of whalebone splints, for certain purposes.

A LOCOMOTIVE has lately been patented in England which is designed to condense its steam when passing through tunnels. For this purpose it has a surface condenser over the cylinders, extending the whole length of the engine.

WESTERN agriculturalists, as a class, are represented as exceedingly comfortable in regard to money, owing to the high prices of grain.

Ancient Territories and Distances.

It is difficult for the modern reader to adjust his ideas of distance and space to the disproportionate scale of magnitude which many of the ancient territories and distances here to the prominent figure which the wars for their conquest and subjugation presents in history. For instance, the ancient historian makes it a marked feature in the history of the times, and a streak of singular good fortune and skill that Athens should early succeed in annexing Eleusis—a foreign territory ten miles distant; and Salamis, situated just across what would be a modern ferry. At this time Ægina, which lay pleasantly situated just over the bay, as Oakland from San Francisco, was the home of "alien enemies," and was only held in subjection by the iron hand of power. Megara, twenty-five miles distant, was in open hostility to Athens; and it was considered a splendid and generous act of *foreign* policy, that the city of learning should steadily uphold Platæa, a city thirty-five miles away, against the hateful predominance of Thebes located at the still increased distance of forty miles!

A writer, from whom we have condensed the above, continues the subject as follows: "The eternal rivalry with Sparta reached over an interval about as great as that which separated New York from Philadelphia; while the disastrous expedition to Syracuse, which bewildered the Attic imagination no less by the daring of its distance than by the splendor of its equipments, traversed a world of waters rather less than from the Chesapeake to Port Royal. Yet these narrow limits were enough for the great passions of patriotism, ambition, jealousy, and international hate. The intense pride of every Athenian citizen in his own splendid capital, his fond recalling of its generous liberties and its grand memories, in exile or disaster, or times of peril or fear, is familiar to any one who remembers the soldierly summons of Xenophon on his retreat, the touching appeal of Nicias to the forlorn hope at Syracuse, the fond tone in Plato's dialogues, or the ringing harrangues of Demosthenes when the shadow of Maeedon began to darken the pass at Thermopylæ."

How insignificant was the territory, and the principles involved in those ancient quarrels, compared with those involved in the gigantic struggle now in progress upon this great western continent and in these latter days! Where is the historian who can do justice to the magnificent theme? Who will emblazon upon the historic page the words which are to convey to future generations, down for all coming time, the glorious deeds which are now passing before us. Verily

> "We are living, we are dwelling
> In a grand and awful time;
> In an age, on ages telling,
> To be living is sublime!"

A new alloy, described as applicable to the manufacture of all metal articles, bells, hammers, anvils, rails, and non-cutting tools, has been patented by Mr. M. H. Micolon, of Paris. The alloy consists of borax. The patentee takes twenty parts of iron turnings or tin waste, eighty parts of steel, four parts of manganese, and four parts of borax; but these proportions may be varied. When it is desired to increase the tenacity of the alloy, two or three parts of wolfram are added. When the cupola is ready, the iron and steel are poured in, and the manganese and borax; finally, the vessel is filled up with coke; the metal is thus in direct contact with the fuel in the cupola, and by quickly running the fused mass into molds, bells which possess the sonority of silver, whilst the cost is less than bronze, may be obtained.

Golden Headed Arrows.—A party of settlers in Surprise Valley, near Goose Lake, recently pursued a band of Indians, killing some and driving the others from their camp.—Among the plunder were said to have been a number of golden headed arrows. This is a fair offset for the golden bullets of Arizona.

Bi-Centennial.—To-day, September 3d, 1864, is the second centennial anniversary of the capture of the city of New York, by the British from Holland—since which time, for 200 years, *New* Amsterdam has been a thing of the past, and the English city of York has given its name to the metropolis of the American continent.

Facts Concerning the Oil Wells.

The interference of one oil well with another, is becoming a common occurrence upon Oil Creek. It is, to say the least, very vexatious to the lucky owner of a flowing or pumping well, who has labored day and night, expending the earnings of years of self-denial, and just when he is on the highway to boundless wealth, to have his hopes crushed in a few hours, by the striking of a well near his own, that taps it, and turns his golden dreams of wealth into limpid, valueless water. Notwithstanding the great disappointment consequent upon a disaster of this kind, the true operator takes it coolly. He well knows, that no effort or foresight of his can remedy the matter, and so, if he fails to effect a compromise, or to sell out, he seeks another location, and very frequently interferes with some one else in like manner.

It would seem, in the minds of many, to be a settled fact, that any flowing or pumping well can be tapped or deprived of its supply, by boring another well upon some particular side of it. As to which side or in what direction this is, we are not clearly informed. No one, as yet, has satisfactorily ascertained the exact bearings of the oil veins.

We might give the opinions of some who profess to know the exact directions in which an oil vein is located, but we consider it no part of our duty as a truthful journalist to theorize just at the present, but to give the facts as they occur, so that the intelligent reader can form his own conclusions. If the operator can get the exact bearings of the oil vein, to tap or interfere with any well, is an easy matter. But we are of opinion that too many exceptions have occurred to render this generally received theory or hypothesis, a fixed fact. We will proceed to give a few cases in point.

Upon the M'Ilhenny farm, in the same locality, there were some nineteen wells. But few or any of these interfered with each other. All of them produced more or less oil. Finally, a well, the Olmsted, was bored almost in the center of these. *The consequence has been, the stoppage of all these wells*, and the Olmsted at one time, not long since, flowed 300 barrels of oil per day. How much it is producing at present, we are not advised, but suppose it don't vary greatly from that amount.

Upon the Blood farm, a well has been bored adjoining the Duncan well, in such close proximity that the bottom of the derricks touch each other, in fact the two wells are not over twelve feet distant. The new well has not only failed to get any considerable quantity of oil, but has not succeeded in tapping the Duncan, though it has been sunk several feet deeper. The owners of the Duncan well, doubtless feel rejoiced at this contradiction of the accepted theory.

In the case of the Philips and Woodford wells, when both are tubed, the Philips well runs pure oil, while the oil from the Woodford is "rily" or mixed with about forty per cent. of water. These two wells are located only a few yards apart in an almost direct line.

The Hammond well, on the widow M'Clintock farm, is surrounded by wells in every direction. Yet at the commencement, it flowed at the rate of between five and six hundred barrels of oil per day. A strong stream of water, from what direction, has never been fully ascertained, literally drowned it out, and it ceased flowing after yielding its greasy treasure in such copious abundance for a short time. But strangely enough, the latest advices from this well, represent that the pump is rapidly gaining upon the water, oil has come up in the proportion of about one third, there is a good show of gas, and the indications are that this well will soon approximate, if not exceed its former supply. Such is the reward of perseverance.

The cases we have mentioned are aggravated ones. Some of these occurring from the reason that parties had leased wells, or operated the wells already bored, with the intent of tapping or interfering with them, in order to be enabled to levy black mail.

How all this loss to individuals and injury to the general trade could have been avoided, had the parties felt disposed to exercise toward each other a more compromising and Christian feeling, the reader can imagine. But then, the sole object of many men here as elsewhere, is to make money, and too many think the end justifies the means. The necessity of some legislative enactments, to effectually remedy this matter, if such a thing be possible, is keenly felt, and we trust that measures will be taken to check this cut throat operation. We can see no reason why the law should not protect the man's property from injury by his neighbor, as much in an oil well, as in anything else.

The instances above, we have only cited to show how utterly useless it is to attempt to theorize upon a matter of which only the great Chemist of the Universe knows the causes and effects.—*Oil City Register.*

Several of the great iron works in Paris are employed in the manufacture of improved machinery for working the mines of Mexico.

The Grain and Fruit Crop at the East.

The monthly reports of the Commissioner of Agriculture, at Washington, is decidedly the best authority that can be had upon the subject of the agricultural and horticultural prospects for the current season. Its conclusions are based on facts obtained, through great industry on the part of the Department, from every locality in the Union, and are therefore much more reliable than mere speculations based on limited information. The following remarks are condensed from the July report:

Wheat.—The Winter wheat is in general in good condition in the Eastern States, but in New York it is frozen out three-tenths, or thirty per cent., in Pennsylvania three and a half tenths, in Maryland two and one-third tenths, in Kentucky and Ohio four-tenths, and in the rest of the Western States from three to three and a half tenths. This will lessen the wheat crop at least thirty per cent. from the yield of last year.

The general growing condition is good; in some northern localities drought prevails, which reduces it below a general average in several of the States.

Barley.—This is one of the most favorable crops, both in amount and its growing condition. It is above an average in both, and not a single complaint has been made about it.

Corn.—The lateness of the Spring retarded the planting of this crop, but the subsequent favorable weather brought it forward rapidly. In some northern localities it had to be replanted where put in early, but generally the crop never came up more favorably. The only State which returns a much lessened planting is Missouri, showing the effects of the war. In many places there are neither laborers nor fencing. In some States, as in Wisconsin and Minnesota, the crop is not in good growing condition. This is occasioned by drought.

Oats.—A few words suffice for this crop. It was never as good as now, either in amount or growing condition.

Clover.—This crop is highly favorable, both for pasture and hay.

Sheep.—The condition and increase of these continue as heretofore reported, and the wool crop will be excellent. The next report will show the amount of wool clipped, and whatever else in our foreign imports and domestic consumption that will be of interest to the farmer.

Hay.—The hay crop of Pennsylvania, Delaware, Maryland, and probably all the Eastern States, has seldom, if ever, been excelled in quantity and quality, and is being secured in the best condition. The crops of wheat, oats and corn, in the same section, are also promising as ever seen at this season.

Peaches and Apples.—Our reports indicate a good peach crop in the Eastern States—a total failure in the West. Of apples, a full crop East—a very partial crop in the West, where although there was much bloom, a large amount of it fell off without setting.

The Commissioner concludes his general observations by referring to the great scarcity of labor. He says:

The correspondence accompanying the returns of the circular show a general scarcity of labor, more especially of farm labor in the West. Nearly all of our letters from that section speak of its scarcity occasioned by the recent call for the 100-days' volunteers. This has had the effect to lessen the amount of crops sown in many places, but in many others it is stated that the breadth of the crops planted and sown is not less than that of last year. How this has been accomplished may be seen in the following extract, one from many others that might be given from the letters received. A correspondent from Iowa says:

"Farmers, with the aid of their wives and daughters, have got in as great a breadth of crops as ever before, and in as good condition. Help being very scarce, our patriotic women have endeavored to do the work of their husbands, and sons, and brothers in the field."

New York Capital in Alpine County.—The Markleeville *Chronicle* says that New York capitalists are negotiating for the purchase of several mines within the limits of that place. The certificate of stock of one company has been called in and forwarded to San Francisco. It is almost a foregone conclusion that in less than sixty days, one if not several of our claims will be in the hands of Eastern capitalists who have had their agents traveling through our county, examining its claims; and we hope ere long to have an abundance of money in our midst developing the mineral resources of Alpine county, which will soon rival our neighboring Territory.

Blackberry root tea is said to be a sure cure of diarrhea. This is simple and easy to obtain, and should not be forgotten.

Homes for our Heroes.

A very excellent custom appears to be coming into vogue, at the East, to provide, a comfortable and respectable homestead for such of our Generals as may distinguish themselves in the present war. Many of them will retire from the field, too poor in purse and disabled in body to enter upon any of the active duties of civil life, while their previous position in the army will necessarily subject them to expenses in living far beyond that which would be expected from civilians. It is well that our heroes should be provided with homes and kept from want—and it is especially proper that those homes should be provided for such as may need them, at once, so that a fear of future want for themselves and families, may not harrass them as they move forward to face the enemy in the deadly battle strife. Several of our leading generals have already been provided for. The last movement in this direction is among the members of the Coal Exchange of Philadelphia who design to raise a fund for purchasing a house for General Hancock. The fund has already reached the neighborhood of $25,000. It is the purpose of the donors to furnish the residence in a magnificent style, and fill its larders with all the necessaries required, before presenting the handsome gift to the gallant and distinguished soldier for whom it is intended.

Has not California some heroes in the field, who may be inclined, when the war is over, to still make this State their home—some one that has sacrificed everything for his country and periled his life, even, that we may be saved?

While we are thus providing for those who wear the stars upon their shoulders, we should not forget the humbler ones, who are none the less heroes, because they carry a musket. A hearty welcome, we trust, will greet our veteran soldiers whenever they return from the war. They also should be met with open doors and full purses—for God knows they will need them. The work of love so nobly begun by our Sanitary and Christian Commissions, will be far from done, when the roll call ceases to be heard, and the *reveille* is no longer beat along our extended "Front." The busy hands of fair ladies will still be needed to prepare necessaries, comforts and homes for the thousands who will return from the war penniless, broken down in health, maimed and otherwise unfitted for active labor in the field or shop. The work of charity which we have begun must go on, and on for a generation, at least. Our heroes must *all* have homes, and must be cared for kindly and tenderly, until they reach their final home in the "little parallelogram" which makes for each a heroe's grave.

Ore from Catalina Island.—The brig Lewis Perry left San Pedro on the 12th of August, for Santa Catalina, for the purpose of taking in a cargo of silver ore from the Gem of Ocean lode. The Perry, says the Los Angeles *News*, will no doubt have a full cargo, as the "Gem" Mining Company, had about one hundred tons of fine ore ready for shipment some two or three months since, and as we learn, have continued taking out ore ever since. The Lewis Perry, after taking in her cargo, will proceed directly to this port.

Restoration of Linseed Oil.—M. Fordred communicates to *Le Genie Industriel* a method, for which he has obtained a patent in France for restoring the sweetness to linseed oil that has become rancid. The plan is simply to force warm air through the oil, either by means of perforated tubes, or by means of a vessel with a false bottom pierced with numerous holes. The proper temperature for the air is between 110° and 127° centigrade, equal to 230° and 260° Fahrenheit. Sometimes a thick scum is formed at the commencement of the operation, but later this disappears. To prevent this scum from taking fire the vessel should be only half filled.

The United States has already a larger country than all the habitable area of Europe—larger than the Roman Empire under Trajan, twelve times as large as France, and fuller of all the elements of wealth than any equal extent of country in the whole world.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, September 3d, 1864.

The share market presented no new feature this week worthy of especial note. Leading etocks have for the most part heen rather inactive but well maintained. Short sales continue to be made with an apparent confidence that lower prices must ere long prevail, hut former sellere option contracte, are maturing from day to day, and the stock required for delivery, creates a demand that otherwise would douhtless not exist, hut for this purpose. The short interest is now an important feature of the market, and until recently has heen attended with some profit to those who were hold enongh to operate in thie way. There is little or no epeculation for a rise, eave among those who hny for purposes of investment, and who have strong faith in the future of the more prominent claims. Recent developments are regarded with favor by this claes of operators, and the undiminished yield of some of these mines would seem to warrant present prices, if not to justify the expectation of higher market value. Receipts of Treasnre from the interior during the past ten days, amount to nearly two million dollars.

The money market ie more active and a better demand prevails. Certain stocks, however, form the hasis of au acceptable security to capitalists, and loans upon this description of collateral can readily be negotiated at current rates of iuterest. Legal Tender notes have heen in decided request the past few days, and large sales were made at the Board, $121,000 changed hands within the range of 38¾ and 44¾; closing last evening at 41. A sudden and unexpected decline in gold at the East occasioned this unueual activity; lastest telegraphic advices under date of 2d, inst., indicate a quick rally to ahont 250 after having fallen to 225.

Gould & Curry fell on Satnrday last from $1,450 to $1,375, advancing this week to $1,490, then receding to $1,450, seller 30, rallying to $1,500, dropping again to $1,440, rising to $1,500, and selling last evening at $1,475; 40 feet were sold. Drifting continues toward the east from the eeveral shafts, and so far as we can learn without as yet, meeting with any compact hody of pay ore. A dividend of $50 per foot will he declared to-day, ont of the earnings for the past month.

Savage has met with unimportant sales this week at $1,250, seller 60, and is now firmly held at ahout $1,350. This company are about to resume the payment of dividends, and will disburse to stockholders on Monday next, $50 per foot, leaving some $20,000 in their treasnry. The prospects of the company are thought to he more flattering than for some time past. The yield of the mine continues large.

Belcher is in rather less request, and has fallen from $850 to $800, eight feet were sold.

Potosi has heen inactive, hnt held with some firmness at $890. Work is progressing vigorously and 100 tons of good ore is now daily taken from this claim, giving constant employment to a numher of mills.

Chollar has been in decided request during thie week, and large sales were made at rates steadily advancing from $520 to $550, seller 30, and closing last evening at $600, asked; 51 feet have changed hands. The latest developments made in the southwest drift are deemed of the most important character, and other portions of the mine are thought to look as well as ever.

Yellow Jacket was sold at $380@375. Work is progressing energetically in this mine. Hale & Norcross was dealt in at from $475 to $510, buyer 30. A side drift is heing run from the 545 feet level, the flow of water at this point interfering with the main drift. Indications thus far are helieved to he favorahle. Ophir is steady at $490 bid, $500 asked.

Uncle Sam is lower under the recent assessment and was offered yesterday at $200. The assesment levied of $100 per ehare, is upon the old stock and will, it is supposed, cancel the entire indehtedness of the Company.

Imperial has risen from $133 to $140@$141, and 96 shares were sold at these rates. Receipts of Bullion for the 15 days ending Ang. 26th, amounted to $58,482.32 and aiter the payment of a dividend of $6 per share for the past month $35,098.51 will remain in the treasury of the Company. The Rock Point Mill made half time the past month. The capacity of this mill is to he increased to 56 stamps. Some 100 tons of ore are daily hoisted to the surface all of which averages shout $40 ₱ ton.

North American fell to $22@$21 and is now in more favor at $26 hid, 35 asked. Daney rose to $35, and was in some request at this figure yesterday.

Wide West has heen the favorite speculative stock of the week and more than 600 shares were sold, advancing from $18 to $26, declining to 21½, rallying to $23 and closing at $20. Advices from the mine are said to he favorahle.

Burning Moscow is in more request and has advanced from $17 to $20—100 shares were sold at these rates. Bajazette & Golden Era declined from $8 to $3 hut is now enqnired for at $8.

Lady Bryan has heen moderately dealt in at from $4⅛ to $5⅛, at which rates 300 shares were sold. El Dorado was sold at $3 to $4 and Golden Age & Empire at $6.

North Potosi was sold to the extent of 242 feet, within the range of $16@$7½, and was offered last evening at $8. Baltic rose from $13⅛ to $16 and is inquired for at the close at $12.

Antelope fell from $17 to $10 and then rose to $13 hid. Iowa was sold at $6⅜@$10 and Santa Rosa at $11@$12. Sierra Nevada is in demand at $9; North Ophir at $14; Melones at $14; and Bullion at $35.

Sheha has rapidly advanced owing to favorahle advices from the mine, from $25 to $80 hid. Live Oak Copper is in favor at $50 hid.

The aggregate sales of stocks and Legal Tender notes since Saturday last amount to $199,528.25.

Sales of Mining Shares

For the week previous to Saturday, Aug. 20.

By the San Francisco Stock and Exchange Board.

Advertising Circular.

The Proprietors of the Mining and Scientific Press would call the especial attention of Mining Secretaries, Trustees and Shareholdes, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important nowspaper of its class published upon this coast.

1st. The Press enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to he equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the Press is less hy one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the Press, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, hy reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the Press or some other paper.

6th. Many copies of the Press are hound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will he taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the Press, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance hy that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will he freely given upon application at the office.

Last, but not Least.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions hy one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the Press shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, hy experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 56 & 57 Government House, Corner of Washington and Sansome streets, San Francisco.

Enlargement.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

A Light Superior to Gas and Calcium.

French and English chemists are now interesting themselves about a new discovery, which is called the Magnesium Light. It is said that this light is richer in actinic power than any other artificial light known—is so rich, indeed, in chemical rays that the sun itself, when unobscured by fog or cloud, exceeds only by thirty-four times the chemical power of a magnesium flame having the same apparent diameter as that which the sun presents. The result is, that by the light produced by the combustion of magnesium-wire, such as is now being sold at six cents a foot, we are able to obtain, in any weather, and at any hour of the day or night, much better photographs than can ever be obtained by sunlight, except on clear and sunny days. Magnesium will thus render us henceforth independent of the sun for photographic purposes, and will, moreover, enable us to obtain photographic pictures of places—such as the interior of caves and mines, the passages in the interior of the Egyptian pyramids, and the like—into which sunlight never enters, nor can enter. But it is not in actinic power alone that the magnesium light exceeds all other artificial lights yet produced. For the purposes of artificial illumination generally it is without a rival. A very thin magnesium wire will give off, in burning, as much light as a very powerful electric light, is soft and diffusive, and does not in the least dazzle or pain the eyes. It is, moreover, of the purest white, so that all colors, even to the most delicate tints, are seen in it as perfectly as in sunlight, while a magnesium lamp has over both the electric-lamp and the ordinary gas light the advantage that it can be carried about as readily as a candle.

EVENING HOURS FOR MECHANICS.—What evening hours have done for mechanics who had only ten hours' toil. Harken to the following facts:

One of the best editors the Westminister Review could ever boast of, and one of the most brilliant writers of the passing hour, was a cooper in Aberdeen. One of the editors of the London *Daily Journal* was a baker in Elgin; perhaps the best reporter of the London *Times* was a weaver in Edinburg; the editor of the *Witness* was a stone-mason. One of the ablest ministers in London was a blacksmith in Dundee, and another was a watchmaker in Banff. The late Dr. Milne, of China, was a herd-boy in Rhyne. The principal of the London Missionary Society's College at Hong Kong was a saddler in Huntly, and one of the best missionaries that ever went to India was a tailor in Keith. The leading machinist on the London and Birmingham railway, with £700 a year, was a mechanic in Glasgow; and perhaps the richest iron founder in England was a working man in Morap. Sir James Clark, Her Majesty's physician, was a druggist in Banff. Mr. McGregor, the member from Glasgow, was a poor boy in Rossshire, James Wilson, the member of Westbury, was a plowman in Haddington, and Arthur Anderson, the member for Orkney, earned his bread by the sweat of his brow in the Ultima Thule. These men, however, spent their leisure hours in acquiring useful knowledge. They could not have reached the eminence they did, hanging around hose and engine houses, or wasting hours away in taverns.

THE SOUTH OPHIR.—The Territorial papers report this Company as having been constantly at work through the past dull spell putting up steam hoisting works which they will start running to-day. Their claim indicates very flattering prospects and they expect very soon to be taking out pay ore. Their shaft is 180 feet deep with a ledge twelve feet in width. Success to them.

TERRITORIAL FAIR.—The Annual Fair of the Washoe Agricultural Mining and Mechanical Society will commence at Carson city on the second Monday in October.

THE Ohio oil wells, coal beds, salt works, and iron mines are being worked more extensively than ever before, and the owners and operators are realizing large fortunes. One man, who could not buy a hat a few weeks ago, has struck an oil well which he now holds at $100,000.

DIVIDEND.—The Imperial Gold and Silver Mining Company declared a dividend of six dollars per share on their capital stock, yesterday.

The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS.

Catalogue of the Fair.

NOW IN PRESS.

We shall soon issue a full descriptive catalogue of articles on exhibition at the Mechanics' Fair, containing an alphabetical index of the names of exhibitors, No. of exhibit, classification, etc. It will also be accompanied by a diagram of the ground plan of the Pavilion and the interior arrangement of the Fair. It will be neatly printed and prove a convenient guide to visitors while at the Exhibition and a valuable book for future reference.

DEWEY & Co., Publishers.

Sept. 3d, 1864.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Inventors and Patentees

Are offered a favorable opportunity of having their inventions and discoveries properly illustrated and prominently placed before the public, through our columns. Application should be made as early as possible in all instances.

PLUMAS County will hold her Agricultural Fair in the latter part of September or early in October.

A MAGNIFICENT

LITHOGRAPHIC VIEW

OF THE

Mechanics' Fair Pavilion.

PUBLISHED AND SOLD BY

DEWEY & CO.,

GEORGE H. BAKER, Artist.

At the office of the "Mechanics' Fair Daily Press," entrance nave of the Pavilion, and at the office of the Mining and Scientific Press, corner of Washington & Sansomo streets.

☞ *READ WHAT OTHERS SAY OF IT.* ☜

MECHANICS' FAIR PAVILION.—We have received from Dewey & Co., Patent Agents and publishers of the SCIENTIFIC PRESS, Government House, corner of Washington and Sansomo streets, a finely executed lithographic view of the Mechanics' Industrial Fair Pavilion, on Union Square. The picture is mathematically correct in proportion, and will be valuable hereafter as a souvenir of the greatest industrial exhibition ever held in our city.—"Daily Alta."

We are indebted to the publishers of the MINING AND SCIENTIFIC PRESS for a copy of a very excellent engraving they have issued of the Fair building and the Fair grounds.—CALIFORNIAN.

LITHOGRAPHED.—The Mechanics' Fair building has been pictured in good style, by George H. Baker. We acknowledge the receipt of a copy. DEWEY & Co. are the publishers.—CALL.

VIEW OF THE MECHANICS' INSTITUTE PAVILION.—MESSRS. DEWEY & Co. have published a lithographic view of this building. Size, 12 by 19 inches. The workmanship does credit to Geo. H. Baker, the Lithographer. The dimensions of the Pavilion are 375 feet in length, breadth 220 feet; dome 108 feet high and 100 feet diameter, the area being 55,000 square feet. P. J. O'Connor Esq., is the Architect. We hope the sheet will prove highly remunerative.—ARGUS.

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It is a sterling periodical, and deserves encouragement.—*Territorial Enterprise.*

The Daily Press.

DEWEY & CO., Publishers,

Proprietors of the Mining and Scientific Press.

Printed and issued at the Grand Pavilion of the "Mechanics' Institute of San Francisco," on Union Square, between Stockton and Powell and Post and Geary streets.

Circulated Gratuitously to all Visitors and Exhibitors at the Fair.

ANVERTISEMENTS, Special and Business Notices inserted upon reasonable terms. Apply at our office in the Pavilion or at No. 14 Government House.

DEWEY & CO.,

Publishers and Patent Agents.

Office of the Mining and Scientific Press, corner of Sansome and Washington streets.

Programme of the Fair.

Until further notice the Pavilion will be open for the admission of visitors

At 9 o'clock A. M., every day except Sundays.

ADMISSION:

Season Tickets for Lady and Gentleman	$5 00
Season Tickets for one person	3 00
Tickets for single admission	50

Tickets may be had at the Institute, on California street, or of any member of the Executive Committee, or at the Pavilion.

MARTEL, the father of Eau-de-vic de Cognac, and the inventor of Cognac brandy has recently deceased. It has been suggested that his disciples should take the temperance pledge for one year—to his memory.

The Origin of Crystalline and Eruptive Rocks

No subject has been more keenly controverted, or passed through more phases of opinion, than the theory of the origin of crystalline rocks. By the followers of the Huttonian and Weraerian Schools it was disputed with as much virulence, and as little regard to fairness, as if it had been a theological dogma; and of receat years—although most people seemed to have imagined all coutroversy oa the subject at an end—an able school of German chemists aad physicists, and the great majority of practical miners throughout the world, have never ceased to protest against the *a priori* ultra-ingenious hypotheses of the generation of geologists now passing away. As far as miners are concerned—while their rejection of these hypotheses does credit to their instinctive judgment—it must be confessed that they did no more than protest; and that, from not understandiag the real points at issue, their protest was rather injurious than otherwise. The preliminaries of the real work, which gradually modified the opinion of all who have seriously studied the subject, was done by the Germaas. They made the beginning of the work, and deserve all the credit for it; although recently they have been superceded by English and French enquirers, better knowu to us, who have brought to light facts that have given us eatirely new insight into the coaditions under which crystalline aad eruptive rocks have originated. As the eaconomic importaace of the subject is obvious, we ueed make no apologies for referring to it in this *Magazine;* indeed it is now pretty evident that the genesis of metalliferous veins is somehow or other iatimately connected with the same conditions with those under which great masses of deep-lying sedimentary rocks were—as we shall show—so metamorphosed as to become ultimately eruptive.

As the rejection of the ultra-igneous hypothesos seems taken, by some persons, as a return to the Wernerian theories, it may bo well to poiut out at once that this is a mistake. Werner assumed that granite, with the trappean and basaltic rocks, had been deposited from water, and, in origin, consequently differed only from the recent sedimentary rocks in being precipitated from a primitive or chaotic ocean; while the essential doctrine of Hutton—and he seems to have been the first to have clearly conceived it—was that these rocks had originated *from beneath.* Now it cannot be too clearly understood that the former hypothesis has been completely disproved, and the Huttonian doctrine—as to these rocks originating from beneath and being sometimes eruptive—iacoutrovertibly established. But it does not follow that by adopting this doctrine, and consequently admitting the plasticity of such of these rocks as have been erupted, we accept the popular modern igneous hypotheses, which assume them to be portions of a primitive molten interior, the residue of a formerly wholly fluid-incaadescent globe. On the coatrary, the philosophy of Hutton was the very opposite to the philosophy inculcated by these hypotheses; for he ever refused to admit that, in geology, man could find any traces of a beginning. Indeed they rather embody the philosophy of Werner, which was that he could trace a beginning—the *mode* of the beginning only being altered. In fact, the foundation upon which the ultra-igneous hypotheses were originally built up was the presumed fact—then generally believed to be unquestionable—that all granite was "primitive," or in other words had origiuated, or assumed its preseat form, prior to the deposition of any sedimentary formation upon it. As long as this belief was accepted as a fact, the Wernerian philosophy, that we could trace a beginning, had certainly a most plausible basis; but, the moment it was shown not to be a fact, that philosophy aad its correlatsd ultra-igneous hypotheses, lost their only logical foundation. Years ago it was shown that granite broke through secondary deposits; more recently it has been shown to be of tertiary age; and so far from being essentially "primitive," we know at present of no granite mass of which we cannot prove an origin subsequent to some sedimentary deposits. With these facts, the Wernerian philosophy of a traceable beginning was incompatible, although the incompatibility was long in being recognized.

But leaving asido considerations as to the philosophy of geology, it may be admitted that all the early enquirers were equally mistaken as to their facts. The true theory, that of the metamorphoric origin of crystalline rocks, is of recent date; and its fullest extent aud importance is generally so little understood or recognised, even at the present moment, that our object in these few pages is to show the great extension given by the most recent enquiries.

Among those who have labored in the cause of metamorphism none have done better service than Mr. Sterry Hunt. Indeed, while numerous chemists and physicists have been working on the subject, he is almost alone among the field-geologists in having given it a zealous or serious attention. In his last contribution on the subject to the *American Journal of Science and Arts*, the conclusions he states are so decided that we think they will interest our readers to give an abstract of them.

He starts with the enunciation of the opinion that the various eruptive rocks have no other origin than the softening and displacement of sedimentary deposits. The merit of originally adopting this view he attributes to Christian Keferstein, who, in his *Naturges chichte de Erdkorpers*, published in 1834, maintained that all the unstratified rocks, from granite to lava, are products of the transformation of sedimentary strata, in part very recent; and that there is no well-defined line to be drawn between Neptuniaa and volcanic rocks, since they pass into each other.

Next, citing Sir John Herschel, Mr. Poulett Scrope, and Mr. Sorby's admirable investigations on the microscopic structure of crystals, he goes on to show how deeply buried sedimentary strata, having, under the combined action of heat aad water, been rendered sufficiently plastic, may either have lost in a greater or less degree the marks of their sedimeatary origin without any change occurring in their stratigrapical position, as in the case of chrystalline schists; or have been further altered so as to be displaced by pressure and forced among the neighboring strata, thus assuming form of eruptive rocks—but which, being consolidated under pressure, retained the same mineral characteristics as the parent beds, It is only in the case of those rocks which, like lavas, were consolidated at or near the surface, and consequently under feeble pressure, that mineralogical characteristics dissimilar to those of the undisturbed metamorphosed crystalline sedimeats are observable.

Under this hypothesis, Mr. Hunt proposes to class crystalline rocks into two divisions:—

1. Indigenous rocks, or sediments altered *in situ;* and,

2. Exotic rocks. or altered sediments which have become displaced or translated, thus forming eruptive aad intrusive masses.

Referring to opinions prevalent a few years back, which attributed an eruptive origin to many rocks now admitted to belong to the class above called indigenous, Mr. Hunt says it is impossible longer to question the sedimentary and indigenous character of many granites, syenites, and diorites. Among such he instances the melaphyres of the Tyrol, which are now admitted to be sediments of Carboniferous age, metamorphosed *in situ;* the granites of the summit of the Alps, which now appear to be tertiary strata altered in place; the granites of the White Mountains of New Hampshire, which Mr. Lesley's recent investigations have proved to be clearly stratified metamorphosed sedimentary deposits in nearly horizontal layers; and the amphibolites of the Pyreaees which, according to a recent note of Virlet, are not eruptive, but merely altered indigenous rocks, belonging to the Triassic series. But, although essentially indigenous, many of these rocks appear, while having been in a soft semi-fluid condition, to have undergone movements which at places show a passage into eruptive rocks. Hence, while the teadency of recent observations is to favor the theory of the indigenous nature of of many rocks hitherto regarded as eruptive, there is at the same time evidence that such rocks were occasionally displaced—that is to say, that a rock essentially indigenous may at times assume an exotic or intrusive form, and that consequently the distinction between the two classes of chrystalline rocks is a *geological,* and not a *lithological* one.

As to the conditions under which these great metamorphic actions have taken place, Mr. Hunt does not say much, and they must obviously indeed for many years remain in the region of speculation. Whether they are in a great degree due to causes which acted with greater intensity in the earlier periods of the world's history, or can be accounted for by the causes now in action, is a point which may be expected to be contested with great tenacity. For our own part we entirely repudiate the theory of the greater intensity of early geological causation, that is to say, as far back as we can trace; and, consequently, we believe that even the most gigantic operations of metamorphism can be accounted for by causes now in action under the earth's crust, in which water acts a principal part. We may, on a future occasion, refer to this most important subject.

Before concluding this note, however, we may refer to one subject which seems to have escaped the attention of Mr. Hunt, and that is the bearing of the remarkable facts seth forth by Mr. Sorby in his Bakerian lecture "On the Direct Correlation of Mechanical aad Chemical Forces," on the origin of eruptive rocks. Many persons who may be prepared to admit the probability of sedimentary strata becoming sufficiently plastic to allow of the obliteration of their original stratified character—who may be prepared in fact to admit the metamorphic origin of indigenous rocks—may still deny the possibility of such an origin for eruptive rocks. They will ask— whence was derived the enormous power required to thrust these rocks in the manner we often find them among neighboring stratified deposits? Four or five years ago M. Daubree, in his *Etudes sur le Metamorphisme,* showed empirically that certain substances increased their bulk, in the process of alteration by one-third of their original volume; and Mr. Sorby's memoir proves, what was never before suspected, that there is a *direct* correlation between chemical action and mechanical force,, which would amply account for this increase of bulk, as well as (conversely) given out when the chemical affinities become inverted. We may simply state here that Mr. Sorby concludes:—

1. That pressure *weakens* chemical affinity if it acts *against* change of volume.

2. That pressure *strengthens* chemical affinity if it acts *in favor of* change of volume.

3. That chemical action is directly convertible into mechanical force and mechanical force into chemical action, in definite equivalents, according to well-defined general laws, without any intermediate action of heat or electricity.

Conclusions which we think will ultimately lead to the elucidation of the laws that have produced eruptive rocks.—*Mining and Smelting Magazine.*

Progress of Invention.

From the feeble beginning of the savage, rejoicing in the fortunate possession of two old nails, and deriving a sufficient income from letting them out to his neighbors for the purpose of boring holes, down to the true Thor's hammer, so tractable to the master's hand that it can chip without breaking the end of an egg in a glass on the anvil, crack a nut without touching the kernel, or strike a blow of ten tuns eighty times in a minute, we have a steady onward movement. Prejudice builds its solid breakwaters; ignorance, inability, clumsiness and awkwardness, raise such obstacles as they can; but the delay of a century is but a moment. Slowly and surely the waters rise until they sweep away all obstacles, overtop all barriers, and plunge forward again with ever accelerating force. The record of iron is at once a record of glory and of our humiliation—a record of marvelous, inborn, God-given genius, reaching forth in manifold directions to compass most beneficent ends, but baffled, thwarted, fiercely and persistently resisted by obstinacy, blindness and stupidity, and gaining its ends, if it gain them at all, only by address the most sagacious, courage the most invincible, and perseverance the most untiring. Every great advance in mechanical skill has been met by the determined hostility of men who fancied their craft to be in danger. An invention which enabled the hand of iron to do the work of fifty hands of flesh and blood was considered guilty of taking the bread from the thrice fifty mouths that depended on those hands' labor, and was not unfrequently visited with the punishment due to such guilt. No demonstrated fruitlessness of similar fears in the past served to allay fears for the future; no inefficiency of brute force permanently to stay the enterprise of the mind prevented brute force from making its futile and sometimes fatal attempts. It is no matter that increased facility of production has been attended by an increased demand for the product; it is no matter that ingenuity has never been held permanently back from its carefully conned plans; there have not been wanting men, numerous, ignorant and ignoble enough to collect in mobs, raze workshops, destroy machinery, chase away inventors, and fancy that so employed, they have been engaged in the work of self-protection.

Locomotive Fuel From Coal Dust.—In the coal-mines of Charleroi, Belgium, 800,000 tons of coal dust have accumulated, impairing the working of the mines, and M. Dehayain, Jun., and another company are working coal dust. After having it pulverized, and freed of all strange matter by machinery, this dust receives the forms and dimensions best adapted for locomotive engines, by agglomerating 8 parts of coal tar to 92 parts of coal dust. This mixture, heated to 300° or 350,° with superheated steam, becomes a paste, which is mechanically and powerfully pressed into cylindrical or rectangular forms, and, after having been cooled, solid, compact cylinders, of about 5 inches in diameter, and weighing 18 lbs., or prysmatic blocks of about 5½ inches by 7 inches and 12 inches high, and weighing 20 lbs., are obtained. These blocks have very nearly the same density and weight as the solid coal, and they burn without being obstacles to the circulation of air through the grate. This new combustible is warranted not to give more than six per cent of ashes, and is now in great demand by railroad companies, on account of its greater heating power and its being actually cheaper than the black coal. M. Dehaynin, Jun., and the other company, manufacture now annually 255,000 tons of this agglomerate.

PETROLEUM.

There seems to be no limit to the extension of Petrolcum discoveries in the United States. It has already been found extensively in several States. The coal oil range of Pennsylvania has been traced into Western Virginia. It has been found in Michigaa and Kansas. In the last named State, petroleum is found in abundance near Paoli, and along the waters of Wia Creek, which runs through Miami county. The oil found there is pronounced by good judges fully equal to the best that is praduced at Oil City, in Pennsylvania. The oil is found floating upon the surface of the creek, from which it can be *spooned* off. Paoli is about 35 miles from Levenworth. Preparations are being made to sink wells there. In this connection, the following extracts from a report by E. Warner, Esq., of the oil lands of Western Virginia, will be read with considerable interest:

Whatever may be the origin of petroleum, and however geologists may differ on this point, they agree pretty well in this, that the reservoirs of oil have no connection with coal, but lie far below the coal measures. It is generally found, however, on the edge of the coal basins. It comes to the surface through fissures in rocks, forming oil springs, or is collected and confined in cavities and porous sand-rocks, or lime-stones. And where the strata have been much disturbed and overturned the oil has disappeared long ago. But in the great western coal measures, where the strata are nearly horizontal, the oil is preserved, and is at the same time inaccessible, except through accidental fissures.

To reach these oil-bearing sand-rocks is the problem to be solved. The most favorable condition to meet it is where the strata are inclined, say from twenty degrees to thirty degrees, and along the summit ranges of the anticlinal axis, where rocks are upheaved and more or less separated, dipping in opposite directions. These rocks are thus brought nearer the surface, and through fissures thus created the oil escapes, or is reached by boring. In these fissures, gas and oil and salt water collect, and wells of different depths will strike one or the other, or all, according to their location and the direction of the fissure.

The heavy or lubricating oils are found much nearer the surface. They are much more valuable than the illuminating oils, but the latter more than make up in quantity, and are much needed to meet the extraordinary demand which has sprung up, as they have become an article of the first necessity to light the world.

Every Man Makes his Mark.—Every man who comes into the world makes some mark upon it ere he goes to his final rest. It may be a small one—hardly visible to the plodding pilgrim on life's highway—but nevertheless, in the future time it will attest some service done or some duty neglected.

Every man exercises some influence in the sphere which he occupies. No matter how low his degree, how obtuse his intellect, how vile his character, he must make his mark upon the times in which he lives, either for good or ill. If for good, future ages will cherish that index of his existence as they would the autograph of some great conquerer on the world's battle-fields; if for ill, it stands out as a beam and a warning upon the pages of history. Washington made his mark in clear and distinct characters, when he aided in laying the foundation and establishing the character of our Republic, and a nation ponders over it now with reverential admiration. Arnold made his mark in a less distinct character when he would have betrayed the liberties of the colonies; but our nation and the world point to it now, and will point to it in all the future, as a blot upon the escutcheon of humanity, and a stain upon the otherwise fair frontlet of American patriotism.

These are the two kinds of marks which different men make upon the world while mingling in its strifes and labors. Even the babe who lingers but a day upon the borders of Time, ere it returns to the pearly strand, makes its impress upon the world. While it lived, a ray of divinity was lighted, and when it died that ray burned on, as it will continue to do for all time, gilding the rugged ways of life with light, and surrounding the dark places with a holy influence.

The smallest atom of created matter has its place and purpose; so the smallest hand traces on the sands of Time some autograph that waves and tempests can never wash away. Every man has an influence, and it should be his aim at all times so to exercise the power inherent in and radiating from him, as that the world shall be the wiser and better that he has lived, and that future generations, in searching the records of his life, can say, with honest conviction: "There was a man—an honest man—peace be with his name."—*Newark Mercury.*

Copper.—Tho wholo cartb appeare to be more or less impregnated with this beautiful and uscful motal, und the sea contains a notable quantity of it. Copper is in great ubundance in various parts of the British Isles, in Hungary, in Siberia, in Cyprus, from which island it derives its name and whence, no doubt, on aceount of the geographical position of thut island, it was principally procured by the Romans. It is also fouud in China, in Australia, nud in Brazil—in fact almost everywhere. It appears certain, however, that gold and silver were known to the ancients prior to copper. Aecording to Ezra viii. 27, "Copper was as precious us gold." Paul, in 2 Timothy iv. 14, lays n complaint against ono Alexnuder, a coppersmith. Theso are the only instances in which mention is made of this metal in the Holy Scriptures. Copper takes a rank among metals from its peculiur color, which, when pure, is of a rose-like huc. Most metals when they becoue rusty lose their beauty; not so, however, with copper, lor it changes inta various shades, from piak to n beauti ful crimson, as in copper bronze powder, to blue, to green; hcnce the artist takes it as u pigment ta produee upou his canvass "the fields nnd the forest." Ia the metallie stato copper possesses so many useful qaalities that various metal-workers find it of great servico. It bears sueh 'weur aad tear' that it was adopted as money at n very enrly period, aad retuine its good namo to the present timo.

Copper is one of tho best conductors of lightning; henee it will be employed to trane mit "tbe flash" below the restless Atlnatic, in forming the submarine telegrnph betweeu England und America. This metal is eo sonorous that few musical instruments can be made without it. The Haadel organ aad "Big Bea" of Westminster ulike owe their toae to copper. Musiciuas, electricians, artists, and money-makers arc not the only persone wbose "occupatioa would be gone" were it uot for copper. Color makers and dyers are mnch iadebted to it, as well as a host of others who follow the samo trade as "Alexander the coppersmith." —*Piesse's Laboratory of Chemical Wonders.*

Metallurgical Works on a Small Scale.—Tbc Reese River *Reveille* gives the following description of a metallurgical establishment located near the Stranger lode, in Recse River. "A battery of four stamps, constructed upon the plau lately inveated by Mr. H. A. Gaston. It is operated by two men turniag a crank. The etamps can be worked very rapidly but much labor is evideatly lost in tbe moving of the levers that raise the stampers. This would he much more npparent as the size of the machine would be iacreased. Mr. Richards, the owner of the mill, thiaks he can crush about four hundred pouads per day, of ten bours. Following the erushing are the usual settlers frum which the pnlp is takea and amalgamated in varioas ways. A bake oven with mullere nad crank answere for a paa in working on the Washoe principle; n tea gallon keg rigged in approved style, amalgamates after the manner adopted at Freyburg ia Germany, whilo ia nnother place we saw that the Patio proeess wae not aeglected. Mr. Richard appears to be n skillful worker of ores, and we hope bis mill may grow iato maamoth proportions We understand that it is the intention to attaeh the mill to the maehinery of some full grown establishmeat and run it by steam. It would be very useful in each a plaee in prospeeting ores preparatory to their crushing on a larger scule."

Mount Diablo Coal Mines.—The Contra Costa *Gazette* says that n much emaller quantity of coal is aow being taken from the Mount Diablo mines than usual. Tbe cbief cause of the falling off is nttributed to the low price of eoal io the San Franeiseo market. Tho extreme of too low a price follows the extreme of too high a priee by a natural reaction. Lnst winter, coal weat up to thirteen and fourteen dollars. This roused competitiou, nnd merchants ordered large quantities from Australia. If our mines had sold coal at ten dollars last winter, that might have remained the permanent priee and they would not now he forced to lie idle or to sell coal at prices too reduced to be remunerative. The Cumberland mines are still shipping henvily however, under old contracts we believe. They have shipped over two thousand tons during the month of July, and will ship as much more this month. We noticed two or three qualities of eoal at their works, and one kiod that was very solid, heavy and hard, lookiog more like anthracite than bituminous eoal. The deeper the excavation extends dowa, the better is tho character of the coal obtained.

Slaughter of Whales—Monterey Bay ie now crowded with whale of the fin-back species, and the slaughter made amongst them by our whaling companies is immense. Five were being cut up on the 26th.

The fare from Marysville to Reese River is now reduced to $25.

Perhaps So.—The *Atlantic Monthly* says that our boasted nge of inveations turns out, after all, to have been only gathering up what antiquity has let fall—re-discovering and putting to practical account what the past discovered, but could not, or, with miscalled dignity, would not, turn to the uses of common life. Steam carriages, hydraulie engines, diving bells, which we have regarded with eo much complaeency as our peculiar property, worked their wonders in tbo teeming brain of un old monk who lived six hundred years ngo. Printing, stereotypes, lithography, gunpowder, Colt's revolvers nnd Armstrong guns, Congreve rockets, coal gas and chloroform, daguerreotypes, reaping machines nnd tho electric telegrupb are nothing new under the sun. Hundreds of years ago the idea was born, but the world was to young to know its character or prize its service, und so tho poor little bantling was left to shiver itself to death while the world stumbled on as aforetime. How many eras of birth there may have been we do aot know, but it was reserved for our later ago to receive the young stranger with open arms, nnd nourish his infant limbs to manly strength. Richly are we rewarded in the precision and power with which he performs our tasks, in the comfort with which he adorns, aad tho knowledgo with which ho ennobles our daily life.

Swansea Copper Ore Shippers.—We learn from the London Mining *Journal*, that Messrs. Elford, Williams & Co., of Swansea, England, have recently erected extensive wharves and other conveniences, in immediate connection with their Crushing and Smelting Works. These wharves are styled the "Swansea Copper Ore Wharves," nad comprise the newest improvements in this, the staple trade of the port. There is storage accommodation for from 6,000 to 8,000 tons of ore, aad the floors of the wbarves are all chalk and coacrete, thus preventing waste. The yards are all carefully covered in, and every precautioa taken to protect the valuable substance of which the wharves are to be the receptacle. They are situated close to the river-side, aad the machinery for crusbing is so arraaged that the engine hoists the ore oat of the vessel aad crushes it at the same time. The engine aad machinery are new, and of the best possible description, everything having been selected with the view of providing the most perfect facilities for the purposes inteaded. Messrs. Elford, Williame & Co. are well and favorably kaown to many American shippers of copper ore.

Nobleness of Labor.—Labor, for a fair remuneration, whether of the brain or haud, should be the glory of America; besides, there is true dignity in labor, especially in cultivating the soil. The object which the farmer has in view is to eubdue the earth; to eradicate the briars and thorns, and to plaat in their stead what is useful and beautiful to man. "Labor," says a noble worker, "has been made by Nature the law of man's condition. It is the price at which whatever is valuable in life must be earned. Whatever, therefore, degrades labor as the business of life, or renders it distasteful or dishonorable, does violence to our social laws no less than to a wise economy." All improvement—all progress of the race in civilization—has been the result of intelligent labor. It has built our cities, dug our canals, constructed our railroads, developed our lead, copper and iron mines, built our steamers and ships, given life and energy to the industrial arts, and above all, is feeding and clothing our people and providing for their happiness. "The nation," says Dr. Samael Johnston, "that can furnish food and raiment, those universal commodities, may have her ships welcomed at a thousand ports, or eit at home and receive the tribute of foreign countries, enjoy their arts or treasure up their gold." Let all labor, therefore be crowned with honor—that labor, especially, that contributes so much to the welfare of man.

Singing at Work.—Give as the man who sings at his work! Be his occupation what it may, he is equal to any of those who follow the same pursuit in sullen silence. He will do more in the same time—he will do it better—he will persevere longer. One is scarcely sensible to fatigue, when he marches to music. The very stars are said to make harmony as they revolve in their spheres. Wondrous is the strength of cheerfulness—altogether past calculation its powers of endurance. Efforts, to be permanently useful, must be uniformly joyous—a spirit all sunshine—graceful from very gladness, beautiful because bright.

A coal company was organized in Philadelphia last spring, and the net earnings for the months of May and June were upward of one hundred and twenty thousand dollars, from which they have just declared a dividend of $90,000. That company might afford to sell their coal a trifle lower—but they won't.

The Great Twenty-Inch Gun, about which so much has been said of late, and which it was feared would be too heavy to be transported on the trucks which had been prepared for it, has finally been taken safely from Pittsburg to Philadelphia, as appears by the following from the Philadelphia *Enquirer*:—

"The monster Union gun, recently cast at Pittsburg, and about which so much fuss has been made in the newspapers, arrived here yesterday by railroad, and was housed in the Pennsylvania Railroad workshops. A large number of people visited the gun during the day; and it formed the staple for conversation all over the city. The bore is twenty inches in diameter, and the whole weight of the gun is one hundred and sixteen thousand four hundred and ninety-seven pounds, (116,497 lbs.) The mammoth trucks used in the transportation of this gun, were constructed by the Pennsylvania Railroad Company, at their Altoona shops. It was at first thought that no trucks could be built strong enough to bear the immense weight of the gun; but the fact of its safe arrival here is a sufficient refutation of the assertion. It will go to New York via the Allentown route to-day."

Traveling Bottles.—Captain Beecher, editor of the English *Nautical Magazine*, has compiled within the last ten years the following curious voyages of bottles thrown into the sea by unfortunate navigators: A good many bottles cast into the sea next to the African coast, found their way to Europe. One bottle seems to have anticipated the Panama route, having travelled from the Panama Isthmus to the Irish coast. Another crossed the Atlantic from the Canaries to Nova Scotia. Three or four bottles thrown into the sea by Greenland mariners off Davis Straits, landed on the northwest coast of Ireland. Another one made a curious trip—swam from the South Atlantic Ocean to the west coast of Africa, passed Gibraltar, went along the Portuguese coast of Fraace, and was finally picked up on Jersey Island. One bottle was found after sixteen years' swimming, one after fourteen, and two after ten years. A few only travelled more than one year, and one only five days. This was sent off by the captain of the Race Horse, on the 17th of April, in the Caribbean Sea, and was found on the 22d, after having gone through three degrees longitude (two hundred and ten miles,) western direction. Capt. McClure, of the Investigator, threw a bottle into the sea in 1850, on his way to Behring's Straits. It swam three thousand five hundred miles in two hundred days, and was picked up on the Honduras coast.

Steel Pens.—Who does not remember the time when a steel pen cost as much as a dozen quills? Who is ignorant of the marvellous reduction that has taken place in the market value of these tiny bits of steel? Sixpence a piece, sixpence a dozen, sixpence a gross—thus have they come down in value. All this could not have been done but for the application of machinery. Men's hands employed in cutting and pressing and shaping the pens, would never have permitted this cheapening to such an extent. And yet there are actually more men employed in the manufacture than were employed when machinery was less used. The machinery, in fact has created a demand, which requires large numbers both of machines and men to supply. Some of the steel pen manufactories of Birmingham are very large establishments, containing ranges of highly finished machines, and giving employment to large numbers of workmen. One of these manufacturers, in his advertisements, states his yearly produce at *millions of dozens;* and there is no reason to doubt that it does reach that extraordinary pitch.—*The Land we Live In.*

What Science is Doing.—A correspondent of the *Call* says: "The man who condenses milk, coffee, etc., for the army, by reducing to a paste which will keep forever, take up little space, and be instantaneously convertible by means of water into the purest form of the expanded article, is doing something new now. He condenses apple-juice into a paste. You can thus carry in your hand what, at will, you can metamorphose into a gallon of capital and pure cider. This paste makes a charming drink. He is also about to condense the juices of other fruits, so as to make them available at any season. And talking of condensing, I saw hay pressed by a new process the other day; a ton of hay was made to occupy only the space of a barrel! Really, if this system of condensation be carried out, bulk will be nothing by and by. We may go in three months' tour and carry our 'luxuries of the season' all the time in our pockets. Huzza for science!"

It has been esteemed a matter of great praise in the family of the Quintii, that they never possessed gold. A great many families are entitled to that praise in these days.

Quartz Gold Mining in Australia.—A letter from Australia, to an English paper, speaks as follows of gold quartz mining in that country:—

From the gold fields satisfactory accounts are still received. Tarrengower still keeps up its name for large yields. A lot of forty-five tons, crushed by the Enterprise Company, is reported to have yielded 412 oz. 12 dwts. Twenty-five tons from Wilson's Reef averaged 4 oz.; and twenty-one tons from Braithwait's Reef nearly 5 oz. to the ton. A new rush has taken place to Dunolly, which promises to do well. Several small nuggets have been found. At Raywood a crushing of forty-two tons of stone is said to have yielded 219 oz. 12 dwts. of gold. Twenty-one tons from Lisle's Reef, Muldon, were lately crushed from the Monitor claim, which resulted in giving 13 oz per ton. At Daylesford, the Union Gold Mining Company washed 41 oz. of gold from a bucketful of wash dirt. A party of miners possessing a 'road claim' in High street, Saadhurst, have obtained gold to the value of £3,000 in a few months. Several other parties are doing equally well at Ballurat; two anggets were found by some Chinamen, one weighing 40 oz. and the other 28 oz. For the past quarter the Kohinor Company, Ballarat, obtained 7,826 oz. 3 dwts. of gold, and had paid dividends to the amount of £580 per fortieth share. I see by the Surveyor's report for the quarter that mining plant to the value of £1,448,301 was estimated as being in use, and that auriferous ground to the extent of 711½ square miles was embraced within the area of the diggers' operations. The total number of miners was 83,551, of whom 45,047 were European, and 23,396 Chinese—workers in alluvial; while in quartz there were 15,089 European and 13 Chinese. Nothing new has been heard from the Gipps' Land Reefs for some time.

More Gold.—One day this week, Cherley Barber was leveling a spot on which to erect a house, when it occurred to him that there was gold in the clay. He tried a panful, and got a good prospect. Tried more, with a like result. He then rigged a rocker, and at last accounts was making a very industrious Chinaman of himself. He was going it alone, and running three shifts—two more than usual. We have seen some of the gold, which much resembles the Jordan Creek gold.—*Humboldt Register.*

Eighty immense guns are about to be manufactured at M. Krupp's celebrated foundry in Prussia. They are for the Russian Government, and will be mounted at Cronstadt. They will carry a ball of two hundred pounds weight, which will perforate a four-inch plate at the distance of three miles. Extraordinary preparations for their casting are in progress at an immease building, which contains fifty steam engines. The hammer to be used weighs 200,000 pounds, and the anvil will be of corresponding weight.

To Renner the Taste of Medicine Palatable.—It has been ascertained by M. Graw that the nauseously bitter and nauseous taste of many drugs may be completely disguised by mixing them with chloroform. It is claimed that even the bitter taste of quinia and the peculiar odor of asafœtida can be thus destroyed.

In France, the waste steam from the locomotives is made to heat the cars in the train behind. It is conducted from the escape pipe through tubes, which inside of the cars are made of copper, but outside are of vulcanized india-rubber, with couplings which can be readily managed.

The Value of Advertising.—One firm alone in the city of London spends $30,000 every year in advertising, and another large establishment that had expended upwards of $40,000, reduced it (on the introduction of a partner, and by his advice,) to half that sum, when their receipts immediately dropped off in the same ratio. They have since gone back to the original expenditure, and their business is again flourishing.

Sometimes there are living beings in nature as beautiful as in romance. Reality surpasses imagination; and we see breathing, brightening, and moving before our eyes, sights dearer to our hearts than may we ever behold in the land of sleep.

Candidates.—John A. Collins, Henry Edgerton, Charles DeLong and Wm. M. Stewart, are candidates to represent Nevada in the United States Senate when she becomes a State. There is now scarce a doubt that the State Constitution will be adopted at the approaching election in that Territory.

Cotton has made the fortune of Dundee. Jute, an East Indin product, has now become its staple manufacture, with great profit. It is a good substitute for cotton in many articles. A gentleman in Dundee has succeeded in inventing a bleaching process which will render the article for many uses an excellent substitute for silk.

Mining and Scientific Press.

W. B. EWER.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 66 and 67, up stairs.

Terms of Subscription:

One copy, per annum, in advance.....$5 00
One copy, six months, in advance.....3 00

☞ For sale by Carriers and Newsdealers. ☜

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:

Saturday Morning, Sept. 3, 1864.

FINANCIAL.

Rather more activity prevails in the money market and a good demand exists without any augmentation as yet in the rates of interest in Bank for choice mercantile paper or upon other prime securities. The late decision of the Supreme Court, setting at rest the validity of our Specific Contract Act, has been productive of good in many respects, but we can perceive no greater ease in fiscal matters since this opinion was given to the public; and the capital it was supposed would be liberated thereby, has not made its appearance to any appreciable extent. There would seem to be no dimunition in the volume of money available for loan purposes, on the contrary, the probabilities are that it has increased and yet the demand for money this week is greater than for some time past and applications in Bank are very numerous.

Money lenders were obliged yesterday to refuse facilities to many parties who are ordinarily not denied a certain line of discount and in the open market rates of interest were ranging from 2 to 4 per cent. per month. Remittances from the country come in slowly and a good deal of complaint is made by the merchants of the poverty of their interior customers.

Receipts of Treasure from the north Coast since last steamer day amount to over $700,000 and from California and Nevada Territory some $1,500,000 has been received.

A fair business in Eastern Exchange was transacted yesterday. Currency Bills were drawn from 130 to 135 premium on gold and Telegraphic Transfers were sold at former rates, 5½ ₱ cent. premium. Drafts payable in coin were sold at 3½ and 4 ₱ cent. premium.

Legal Tender notes have been exceedingly active this week and heavy transactions have taken place at rates advancing from 39 to 45 and declining to about 41. Later telegraphic advices from the East quote gold at 248 under date of Sept. 1st.

BASKET MAKING.—An emigrant party which lately arrived at Grass Valley, near Austin, Reese River, being nearly destitute and wanting employment, which they were unable to obtain, and understanding the business of basket making, attempted it with the willows that grow in profusion in that locality. These were found to be of a superior quality of basket willows, and the baskets manufactured are beautiful specimens of handiwork, selling readily in that market, and at prices remunerative and very satisfactory to the ingenious manufacturers.

WOMEN AS BARBERS.—A barber in Bangor, Maine, has introduced female assistants, and says they prove very dexterous and efficient. If the innovation should spread, it will head off the board movement, and hirsute appendages will soon become unfashionable.

A BIRD'S EYE VIEW OF BUSINESS.

The business of this week has not wound up satisfactorily to the mercantile interests. Early in the week trade was dull and quiet, but at the close matters seemed to loom up a trifle with some round operations consummated in Rice Syrup, Sugar, etc.

The shipping trade is still quiet; the arrivals have been numerous from both foreign and domestic ports. Imports have been large and stocks of merchandize in warehouse, both bond and free, are becoming rather burdensome. Still we ought not to complain, as our aggregate exports of merchandise have been large, we have also sent more or less silver and copper ore abroad, and at this writing there are two vessels now in the stream about ready to sail for China with upwards of $600,000 on board, mostly in silver bullion.

Operations in Rice have been to the extent of 10,000 mats at $6.50 for Siam, $7 for Patna and $8 ₱ 100 lb for No. 1 China.

San Francisco Golden Syrup to the extent of 25,000 kegs of 5 gallons each, have been placed at agents' reduced rates. Crushed Sugar at the close, owing to the withdrawal of the San Francisco and Pacific Refinerys from the market as sellers, has been advanced to 16 cts. ₱ lb.

The Tea Market, previously dull has been far more so, ever since the arrival of the Emily Banning with Invoices from Japan, which it is expected will soon be offered at auction.

Provisions, Pork, Lard and Butter have all risen in value, during the week. Isthmus Butter rules at 32½ cents per lb., Lard $15 and Pork at $22, for Prime $25, for Mess and $26 for Clear. Flour remains at $9.50 for Superfine, $10.50 for Extra. Wheat ranges from $3.25 to $3.50. Barley sells at $3@$3.15 for new, old $3.35 per 100lbs. Oats $2.50@$2.80 Potatoes 4c. per lb. Hay $23@$28 per ton. Bran $40@$42. Wool 20@24c. for Oregon Fleece—California 22c. per lb. Dry Hides are dull at 10@11c.

THE MECHANICS' INSTITUTE PAVILION FOR 1864.—Our lithographic view of the Pavilion upon Union Square is now ready and for sale. Mechanics and tradesmen throughout the city will do well to secure a copy of this fine picture, and thus preserve to their sight and memory a correct representation of this mammoth structure, which in after times will be so blended with the mechanical progress of our city and State. The picture has been prepared in the finest style of the lithographic art, enlivened with a large number of characters, some of whom will be well known at sight by most residents of the city. Price of single copies $1.

THE THREE PAVILIONS.—We have deemed it a matter of sufficient interest to our readers to give in our present issue, for permanent record, a correct illustration of each of the three pavilions which have been erected by the Mechanics' Institute of this city, for the convenience of their several Industrial Exhibitions. They will be found upon our first page, (the third pavilion being in the head of our Fair paper,) and will be recognized by all familiar with those structures, as correct representations.

FINE ORE.—Quite a number of sacks of what appears to be very fine ore, said to contain gold, silver and copper, has been piled up against a lamp post on Montgomery street, near Clay, for several days during the past week. We understand that it is from the Open Sesame mine, Mount Diablo. To all appearances such ore would do credit to some of the first class mines in Washoe. The company, from whose mine it was taken are about putting up a mill. They are taking out a large quantity of similar ore.

MARKET STREET IMPROVEMENTS.—We notice a large lot of cut granite curb stones strewed along on either side of Market street, between Second and Third. This appearance would indicate that the proper authorities had finally decided to put in order one of the worst conditioned, yet the most frequented thoroughfares in the city.

EASTERN FINANCES.

At the date of our last mail advices from the East, August 3d, received per steamer, a more cheerful feeling seemed to prevail, and people of all parties were canvassing together the situation of political, military and financial affairs, with far less of disagreement, and with a calmer tone than at any previous date for many weeks. The new Secretary of the Treasury, Mr. Fessenden, had gone to Boston, and was to go hence to Portland, on a brief visit to his home. A good deal of confidence was beginning to be felt in the financial policy of the Secretary. The large subscriptions throughout the North to the new 7-30 loan, afford ample evidence of this, and indicates complete success and speedy absorption. The people appreciate the fact that they have no clearer or more imperative duty than to sustain the national credit, and the alacrity with which the appeal of Mr. Fessenden was being responded to, warrant us in believing that the financial measures of the Government are likely to assume a more satisfactory condition than for some time past. The U. S. Sub Treasurer in this city, D. W. Cheesman, has been authorized to receive subscriptions to the new 7-30 currency loan. Thus far the deposits have not been as large as was anticipated, but the recent advance at the East in all Government securities may stimulate deposits of greenbacks here, in exchange for these bonds. For purposes of remittance East in lieu of Legal Tender notes, at the present market value of the latter, the exchange would be a desirable one.

FAY'S MOVEABLE BREASTWORKS.—We understand that Mr. Fay, the inventor of the moveable breast works, about which so much has been said of late, has completed his joint stock arrangements and will leave for the east on the steamer to-day. Mr. F. will take with him letters that will ensure for him and his invention a favorable reception. There are many in this city who are especially desirous that the invention should have a fair trial before the enemy. Col. Benoist, an old Indian fighter, who has seen at least thirty fights with the Indians, says it will be invaluable against the savages, and increase any force which may be fully equiped with them, two-fold. For many classes of work it appears as though it must be almost indispensable. For advancing on rifle pits, for defence in digging rifle pits in face of an enemy, for holding bridges and narrow passes, for driving in pickets, and for sudden dashes on artillery, it must prove of great value. We trust it will be allowed a fair and full trial.

INCORPORATED.—The Attica and Esperanza Gold and Silver Mining Companies have filed their articles of incorporation in the office of the County Clerk. Capital stock of the Attica is $240,000; that of the Esperanza, $200,000. Also, the New York and Arizona. Capital stock, $1,000,000. Trustees: Thomas N. Starr J. B. Beers, Leander Ransom, N. T. Brocklebank and Wm. Holdredge.

EFFECTS OF THE RAIN.—Steamboat men engaged between Sacramento and Marysville say that the water in the Sacramento rose soon after the late rains to the extent of fifteen inches. This proves that immense quantities of rain fell along the country north of the American river, sufficient to swell the stream from Bear river up. The streams generally, throughout the State, were similarly affected, and much damage was done to river operations. The ditches, however, were generally pretty well filled; but the supply could only have been temporary.

THANKS.—We are under many obligations to D. O. McCARTHY, Esq., the gentlemanly and enterprising publisher of the *Daily American Flag*, for favors which enable us to promptly present our readers with the eloquent and able address of Mr. Conness, delivered at Platt's Hall, last evening, preparatory to the opening of the exhibition of the Mechanics' Institute. The *Flag* was ahead of all its neighbors in the publication of the address.

DECEASE OF PAUL TORQUET.—In the recent decease of Paul Torquet, Esq. our city has lost one of its most estimable citizens, and a blank is left in the community which few can fill. Paul Torquet was a man of large and most varied practical information. His influence upon the mechanical interests of our city and state, was second to none. For fully twelve years he has been closely identified with the development and growth of our California system of mechanics; an interest which has been and, to a great extent, still is, an experimental one. No man has studied more deeply into our mechanical wants, watched more patiently their gradual development, or contributed more effectually to their necessities than Mr. Torquet. As a consulting engineer his theoretical knowledge, combined with his long and observant practical experience rendered his counsel highly valuable. As a man and a citizen he was ever at his post, ready and able to do his duty. In his domestic relations he ever maintained the same equable temperament which always characterized all his business relations. Though cut off in the early prime of manhood, his numerous friends think of him with an affectionate esteem in which respect not untinged with the veneration felt for older men largely mingles. While they remember him as a simple and earnest son of science—a model of perseverance, and steadfast, contented industry, and a modest, frank and amiable gentleman—they will cherish his memory yet more because of the beauty of uprightness which was illustrated in his life.

THE YELLOW JACKET COMPANY, says the Virginia *Enterprise* of the 23d inst., has just struck a vein of splendid blue sulphuret ore. It assays about $300 per ton, and will yield, by mill process, quite as well as any of the Gold Hill mines. The streak of ore is some ten feet in width. Two mills are already being supplied from it with ore for crushing. The Yellow Jacket will now take rank with our paying mines.

THE CAMANCHE.—Work is still rapidly progressing upon the Camanche. Some two hundred and fifty men are constantly employed in the various departments of the work. The turret machinery is nearly all in place, and also the machinery for raising and letting go the anchor without any exposure of life. The hull is so nearly completed that water will be let into it to-morrow, or Monday, to ascertain whether it is tight. The deck is being put on, and a large portion of the heavy oak timber which is designed for a portion of the side armor is on, and firmly bolted to the hull.

FROM THE NORTH.—By the arrival of the Sierra Nevada, on Tuesday, we have dates from Victoria to the 23d, and from Portland to the 27th. She brings $155,910 in treasure—$144,910 from the latter port and $11,000 from the former. The Victoria papers continue to give favorable reports from the Sooke mines. "Big Strikes" are reported, and are gotten up in the best sensational style. Accounts by way of Oregon are not so favorable—in fact are quite discouraging with regard to the extent and average richness of these mines. The facts with regard to these mines will soon be made known through disinterested channels; until that time our miners will do well to remain quiet where they are, and remember "Frazer."

LARGE SALE OF MINING STOCKS.—It was rumored some time since, says the Aurora *Daily Union* of August 25th, that James Stark and others had effected a large sale of Bodie stock, in New York, for an immense sum in greenbacks. The report was generally disbelieved, but now the deeds and papers have arrived from New York, to be recorded in Mono county, California, where the mines are situated, and we suppose all doubt in relation to the genuineness of the transaction is at an end. We saw the papers in Wells, Fargo & Co's office last evening. The amount of stock sold is thirty eight thousand one hundred feet, comprising over a dozen of the principal claims in the Bodie district, and the consideration mentioned in the deed is "ten million dollars." It is not probable, however, that the above sum actually changed hands, as the revenue stamps on the deed amount to only $1,000, which, according to the revenue law would make the consideration $1,000,000.

Pundit on the "Mathematics of Mining."

EDITORS OF MINING PRESS:—In our late entertainment of the proverbial fortunes of silver mining we had much of the problematical and the intangible kindly proffered us in return for mysteriously disappearing assessments—such as figures of speech for dividends, and an abundance of that sort of mining that foots up its profits by lawyers fees in subtraction, officers salaries in multiplication, and compound rascalities in addition. Anything at the present time tending to show up mining on the square, or to give definite symbols to the arcana of stocks or shippers must be, as a natural consequence of the sacrifices of the past, hailed with a furor of joy. What share of this feeling was my own, when I first noticed in the PRESS the announcement of a forthcoming series of articles and shortly after saw the initiatory number under the promising designation of "The Mathematics of Mining," I leave unrecorded. I felt, at least, that an investment of time in the perusal of the said articles would yield the selfish interest of an individual gain. Mathematics being the science of exactness, I of course expected an approximate correctness in the treatment of the facts interwoven with the subject. Let us see how reliable these are.

Mr. Easton, almost at the beginning, gives us a classification of the rocks accompanying mineral veins; the designations are apparently new and different from those mentioned in mineralogical or geological text books, and sanctioned by common use and high scientific authorities. The originality which seeks to change the nomenclature of a science should present very strong and conclusive reasons for the desecration. I fail to learn from Mr. Easton's article, or any esteemable work of a recent date, what "talcose trap" really is, although I know that he gives this name to what I had supposed to be serpentine. Nor does he state the exact quality of "granitic trap." Elsewhere he has told the public, while demonstrating the perpetuity of the Gould & Curry mine—to his own satisfaction at least—that its wall rock is "granitic trap." Granite is generally claimed to consist of quartz, mica and feldspar, and how a rock containing neither of the two former materials can be called granitic, passes my comprehension. As a felspathic base impregnated with crystalline aggregates of hornblende, I should call it a greenstone porphyry.

Mr. Easton seems to have a special fondness for the term "trap" and has very awkwardly "put his foot in it." He uses the word in a generic sense, though not without informing us what "trap" is in reality, but at the same time stating that there *is* "trap" which is *not* "trap;" or in other words volcanic rocks, which have not the step or stair form of creation or cleavage. Yet, he persists, contrary to all scientific usage, in calling all such erupted rocks "traps." Marble, a carbonate of lime, easily converted into quicklime, and in no respects dissimilar to that which often by perceptible stages is traceable as a portion of a highly fossiliferous formation, he calls a "true trap," and declares that it is of volcanic origin. If he can establish this to be the case he will have revealed a scientific discovery of vast importance, as effecting our views of the earth's interior elements and volcanic productions. No geologist within my recollection has deemed marble to be aught else but a metamorphosed limestone. The presence of carbonate of lime in erupted masses, in any other state than minute divisions has hitherto remained unsuspected. The facility with which our mathematical friend disposes of the generally supposed character of this rock, is only excelled by the slightness of the argument by which he accomplishes his object. It has, he says, "the true volcanic dip," and why not, if as he avers, it is flanked on one side by micaceous rock (mica-slate?) and on the other by granite. If the limestone sediment was compelled to conform with the dip of its granitic trough, does that indicate that it was belched forth from the interior earth?

He affirms that no one for a moment supposes the overlying micaceous rock to be sedimentary. Now, this statement is directly contrary to known facts, for sandstone has been found passing by gradual stages into mica slate. On a par with his knowledge of the origin of marble is Mr. Easton's statement that carbonate of lime accompanies the Newton copper vein, on its hanging wall, when a little mineralogical knowledge would have shown this mineral to be talc clay, similar to tailors chalk. Again, he bedecks the clay slates of California with the nomenclatural trappery of "black trap," for the same reasons given concerning the marbles, with the additional information, that clay slates belong to the anthracite coal, and are only found in a particular location in the sedimentary series, and more limited than those called "black traps."—Shades of Humboldt! are there then no massive formations of clay slate unconnected with anthracite coal, and has this more learned and enpahle stroke of the pen blotted out pages of your lahorious "treatise on rocks," proven your geological ignorance in describing the peculiar metalic formations of Mexico, South America and Europe, and disclosed the a, h, c's, of knowledge to the arrogant spirits of your scientific compeers?

Mr. Easton says that the persistent fact of quartz lodes being found nearest the surface on the summits of hills is one of the strongest proofs of the volcanic origin of quartz ledges; and why? "because the upthrow of the ledge makes the hill." Is not that a precious piece of reasoning in a circle! The quartz is of volcanic origin, because it is on top of a hill, and the hill is there because quartz is of volcanic origin. Now, is it not perfectly reasonable that ravines and sags of ground should be formed, as nine tenths of the geologists believe they are, by aqueous agency, where the hed rocks are most shattered or rotten or least siliceous. But instead of being upon the extreme summits of hills, quartz lodes occur either on their flanks or lower slopes. The "Allison Ranch" lode was found in the bed of a creek, the "Union" copper lode at the foot of a mountain, and hundreds of others in positions but little elevated above the general level of the surrounding country. Water courses appear to have cut intercepting quartz veins where least stable in character, and in some cases left deep deposits of earth, rendering the more elevated exploitations the surest of success in finding an unbroken and largely defined portion of a lode. Mr. E. makes use of the qulification "hills in the course of a lode"—generally small affairs, and if quartz is thus limited in its lifting powers among the surrounding rocky Titans, it cannot make half as good a "raise" as the wild cat stock sired by it.

Having consumed a certain limit of time in noticing these mathematical vagaries I shall postpone further comment for another communication on the subject, unless in the meantime mother nature should pack up her "traps," and thereby leave a huge vacancy in the *terra firma* of California. PUNDIT.

GOVERNMENT is constructing a wharf half a mile long at City Point, for army purposes.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Meetings, Assessments and Delinquent Sales.

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day previous to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, unless otherwise ordered by the Board of Trustees, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

IMPORTANT DISCOVERY

—IN THE—

Photographic Art.

Jacob Shew's

CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.

[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

☞ The public are invited to examine specimens at my Gallery. ☜ JACOB SHEW.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

READY ROOFING

READY TO NAIL DOWN.

READY ROOFING
At less than half the cost of tin roofs.

READY ROOFING
More durable than Tin.

READY ROOFING
Suitable for steep or flat roofs.

READY ROOFING
For all kinds of buildings, in all climates.

READY ROOFING
Easily, cheaply, and quickly put on. Needs no coating over with cement after it is nailed down.

READY ROOFING
Made of a strong woven fabric, thoroughly saturated and covered upon both surfaces with a perfectly water-proof composition, and put up in rolls ready for use—40 inch wide, and 75 feet long.

WE ALSO MANUFACTURE
Liquid Cement,
FOR LEAKY TIN ROOFS.
Much cheaper and more durable than oil paint. Also,

Compound Cement,
For Leaky Shingle Roofs,
Which will often save the cost of a new roof.

Samples of Ready Roofing and Circulars sent by mail when desired. Favorable terms made with responsible parties who buy to sell again.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJUSTING WRINGER. No wood work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $6.50. No. 1, $7.50. No. F. $8.50. No. A. $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,

No 13 Platt Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb-Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the best Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST Putnam's Wringer. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co:—

GENTLEMEN. I know from practical experience that Iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use. Respectfully yours,
JNO. W. WHEELER, Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.
New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.
6-tf

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

A GREAT INDUSTRIAL FAIR!

—TO BE—
Opened in San Francisco,
—ON THE—
30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be justly considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has its new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

MECHANICS' INSTITUTE.

INDUSTRIAL EXHIBITION, '64.

NOTICE TO EXHIBITORS,

THE EXECUTIVE COMMITTEE WILL BE PREPARED at the Pavilion, on Union Square, to receive Goods intended for Exhibition on the Twenty-Second of August, and none will be admitted after the 31st of August.

By order of the Committee.
C. B. PORTER.

THE WORLD'S HORSE FAIR!

AT SAN FRANCISCO,
—AND—
Ladies' and Gentlemen's Equestrienne Exhibition!

THIS GRAND EXHIBITION WILL be held at the BAY VIEW PARK, commencing September Second and continuing until the Eleventh, during which time the Mechanics' Fair will also be in progress—the Grand Pavilion of which will be open every evening—so that persons from a distance can attend both Fairs during their visit to the City. For particulars and Premium List see large posters and California Spirit of the Times.
7-td BEN. E. HARRIS, Secretary.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

SAN FRANCISCO FOUNDRY
And Machine Works,
Corner Fremont and Mission streets,
SAN FRANCISCO.

ALL KINDS OF MACHINERY MADE TO ORDER ON the most reasonable terms. Steam engines, high and low pressure, Quartz Mills, Saw Mills, Mining Pumps, Hoisting Machinery for mining purposes, Agricultural Implements, etc., etc. Castings, of all descriptions, made to order. Also, WINE, CIDER AND TOBACCO PRESSES, of the latest improved patterns.

☞ Steam Engines constantly on hand.

Brodie's Improved Patent Wind Blast Separator for Dry Crushing, Manufactured here.

☞ REPAIRING promptly attended to.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First st., between Howard and Folsom streets,
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz Mill Machinery Mining Pumps, Amalgamators, Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

⁂ Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

NEW VOLUME.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge. If in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

L. B. WOOSTER, Secretary.
Office, No. 410 Montgomery street. 7-2t

Mining and Scientific Press Patent Agency,

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent, and if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the Inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question can only be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $50 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we make a fee proportionate to the labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special polut to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping on woolens, oilcloths, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositious in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacturo, architecetural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunc tion from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our chargo will be modcrate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

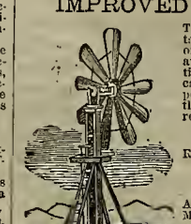
HUNT'S
IMPROVED WIND-MILL.


THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.
Prices, from $50 to $1,000.
ROUND AND SQUARE WATER TANKS BUILT TO ORDER.
HUNT'S PUMPS
Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.
HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power
Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.
ALL WORK WARRANTED.
☞ For further Particulars see small circulars. ☜

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and the can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

San Francisco, June 23, 1864. 1-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss at the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence waste of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patents, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS, NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking on an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNOERFORD & PRATER, Proprietors.

Office, northwest corner Washington and Kearny streets, San Francisco. 7-4t

Fairview Copper Mining Company, Calaveras County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 3d day of August, 1864, an assessment of forty cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday the 10th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday the 26th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

W. WILMOT, Secretary.

Office, 537 Washington street, San Francisco. 6-5t

Gold Rock Gold and Silver Mining Company, Murphy's Camp, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 30th day of May, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company; and that at a meeting of the Board of Trustees of said company, held on the 9th day of August, 1864, it was ordered that said assessment should be payable on the 10th day of September, 1864, in United States gold coin, to the Secretary of said company, at the office of said company, No. 433 Montgomery street, in the city and county of San Francisco.

Any Stock upon which said assessment shall remain unpaid on Saturday, the 10th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 26th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees

EM. FENARD, Secretary.

Office, No. 433 Montgomery street, in the city and county of San Francisco. 7-4t

Great Western Gold and Silver Mining Company, Keyes District, Mono County, California.

Notice is hereby given that at a meeting of the Board of Trustees said Company, held on the 19th day of August, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 10th day of September, 1864, in United States gold or silver coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 8th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

BROCK JOHNSON, Secretary.

Office, No. 23 Government House, San Francisco. 9-4t

Good Return Consolidated Gold and Silver Mining Company, Inyo District, Tulare County, Cal.

M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

PRESTON MORRIS, Secretary.

Office, No. 525 Montgomery street, San Francisco. 9

Important to Californians.—Many inventore bave lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicant. for patents, whose safest course le to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

The *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

General Jackson Gold and Silver Mining Company, Devil's Gate District, Lyon County, N. T.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 23d day of August, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company, payable on the 27th day of August, 1864, in United States gold coin, to the Secretary at the office of the company, or to Peter Brown, Silver City, N. T.

And in accordance with law and an order of the Board of Trustees made on the aforesaid dates, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the Companies, 305 Montgomery street, San Francisco, on Thursday, the 15th day of Sept. 1864, at 11 o'clock, A. M. of said day, to pay said delinquent assessments thereon, together with the cost of advertising and expenses of sale.

San Francisco, Aug. 8th, 1864. J. S. LUTY, Sec'y.

7-4t Office, 305 Montgomery Street.

Salamander Gold and Silver Mining Company, Mill Valley District, Calaveras County, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of ten cents per share was levied upon the assessable capital stock of said Company, one-half payable on the 16th day of August, 1864, in United States coin, to the Secretary of said company, and the balance payable in thirty days from said 16th day of August.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 4th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

F. D. GALLAGHER, Secretary.

Office, No. 35 Metropolitan Block. 8-4t

San Francisco Moss Ledge Company, San Francisco District, A. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 16th day of August, 1864, in United States Coin, to the Secretary, at his office, No. 618 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 28th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

ROBT. T. POLK, Secretary.

Office, No. 618 Merchant street.

Silver Mountain Mining District, California.

GREAT TRIUMPH

—OF THE—

FLORENCE!

THIS CELEBRATED NEW SEWING MACHINE HAS THE FOLLOWING ADVANTAGES OVER ANY AND ALL OTHERS!

☞ It is the only Machine that will sew different thicknesses or over rough uneven surfaces making through or over all the same uniform and perfect stitch, WITHOUT CHANGE OF TENSION.

☞ It is the only Machine that has the *reversible feed motion*, which enables the operator, by simply turning a thumb screw, to have the work run either to the right or left, to stay any part of the seam or to fasten the ends of the seams, without turning the fabric.

☞ It is the only machine that makes more than one kind of stitch. It not only makes the lock stitch, but three others, which, for certain kind of work, are much superior, especially where elasticity is required.

☞ It is the only machine that will gather and sew on at the same time, and do it more evenly than it can be done by hand.

☞ It is the only machine that fastens the end of each seam securely, and does it in one fourth the time that it can be done by hand.

☞ It does not draw thin, fine goods down through the slot in the work plate, nor drop a stitch in turning a corner.

☞ Changing the length of the stitch, and from one kind of stitch to another, can readily be done while the Machine is in motion.

☞ *Every stitch is perfect in itself*, making the seam secure and uniform.

☞ It is almost *noiseless* in its operations.

☞ Its motion are all *positive*; there are *no springs* to get out of order, and its simplicity enables the most inexperienced to operate it.

☞ *It will not oil the dress* of the operator, as all the machinery is on the top of the table.

☞ *It is the most rapid sewer in the world*, making five stitches to every revolution.

☞ It makes a stitch alike on both sides of the fabric.

☞ *It does the heaviest or finest work* with equal facility, *without change of tension.*

☞ Every Machine has one of Jenck's patent hemmers attached, (the right to use which we control,) enabling the operator to turn *any width of hem desired.*

☞ There is no other Machine which will do so large a range of work as the FLORENCE.

☞ It does not require finer thread on the under side than it does on the upper, and uses any kind of thread or silk.

☞ The needle is more easily adjusted than in any other Machine.

☞ It will sew across the heaviest seams without change of tension or breaking of thread.

☞ It is fully protected by nine patents, and licensed by Elias Howe, Jr., and associates.

☞ To avoid the *strain on the eyes, bent postures, close application and fatiguing care*, incident to more necessary on a large proportion of work done on other Sewing Machines, we now furnish each Machine with "*Barnum's Self-Sewer*," *which guides the work itself*, and is of great value, especially to inexperienced operators.

☞ While possessing the above and many other advantages, the FLORENCE is sold at corresponding prices with other first-class Machines.

☞ We warrant every Machine to all that we claim for it, and will give a written warranty if required.

☞ *Over Seven Hundred* FLORENCE Machines have been sold on this Coast in the short time since the agency has been established here, and in no instance can a person be found who has a FLORENCE that would exchange it for a Family Sewing Machine of any other manufacture, which is convincing proof that they are what we claim.

THE BEST FAMILY SEWING MACHINE IN THE WORLD!

☞ Do not leave the Pavilion before seeing the FLORENCE and securing Circulars and Samples.

To fully appreciate it, parties should see it in operation, see how easily and with what little change in the Machine it does all the different pieces of work.

[From the Mechanics' Fair Daily Press.]

AN HISTORICAL SKETCH OF THE MECHANICS' INSTITUTE OF THE CITY OF SAN FRANCISCO.

There are but few associations in this State which have attained a greater success, and perhaps not one which has been productive of more lasting benefit to our physical progress, than the MECHANICS' INSTITUTE of San Francisco; and it seems particularly appropriate that, on the eve of this, the "Fourth Grand Industrial Exhibition" of the Institute, we should briefly pass in review some of the principal incidents in the history of the Association since its first, organization. Like all other great enterprises, this has also been attended with many difficulties, and much labor and expense. But, thanks to the liberality and energy of a few who knew no such word as "fail," the Assoc ation is now apon a most substantial and enduring basis. The society is deserving of the highest encomiums for its untiring efforts and zeal in promoting the welfare and advancement of the workingmau and of home iadustry throughout the State.

ITS ORIGIN.

The first meeting of the Mechanics of the city of San Francisco, for the purpo e of organizing the association now known as the "Mechanics' Institute of the City of Saa Francisco," was held nt the offiee of the Tax Collector, in the City Hall, on the eveniug of the seventh day of December, 1854. At this meeting MR. GEO. K. GLUYAS presided, MR. RODERICK MATHESON acted as Secretary, and MESSRS. BENJAMIN HEYWOOD, ROD. MATHESON, J. S. WILLIAMS, E. T. STEEN, and HENRY E. CARLTON, were appointed to draft a constitntion and by-laws for the propos·d association. On the sixth of March following, that committee made its report, and on the 29th day of March, 1855, the Institate was fully organized by adopting the constitntion, and electing the following officers: Benjamia Haywood, *President;* John Sime, *Vice President;* P. B. Dexter, *Recording Secretary;* Wm. M. La Roche, *Corresponding Secretary;* Gardner Elliott, Geo. Cofran, S. H. Williams, James Ballentine, John C. Mncready, Eli Cook, and S. G. Bugbee, *Directors.*

On the 12th of the next April, the Associatiou adopted a code of by-laws, rules of order, and regulations for the library aad reading rooms. On the 24th day of the same month, the proper certificate was filed in the office of the County Clerk of the county of San Francisco, by which the Institute became a corporate body, under the general incorporate act of the State of California. By the terms of the constitution, their annual election is fixed on the first Friday of each year. By reference to the first annual report of the President, made on the 5th day of March, 1856, we find that The total receipts for the year were $1,106.86
The disbursemeuts were 1,085.37

Leaving in the treasnry $ 21.49

The following officers were elected for the ensuing year: Roderick Mathesou, Presidcut; Gardner Elliott, Vice President; P. B. Dexter, Recording, Secretary; Eli Cook, Treasurer; H. F. Williams, Corresponding Secretary; C. L. Taylor, Wm. McKibben, D. Van Pelt, G. D. Street, J. E. Kincaid, F. P. Swett, and Jonathan Kittredge, Directors.

The number of members at that time enrolled was 282, only 92 of whom had paid their quarterly cues. A library and reading-room had already been established, and provision made for a regular course of lectures. The library, at the date of the report, consisted of only 487 volumes all told. The first book placed in the library was "Loudon's Encyclopedia of Architecture," which was presented to the Institute by S. C. Bugbee, April 5, 1855.

On the 4th of March, 1857, the second annual report was made by the acting President, Mr. Gardner Elliott, from which it appears the prospects of the Institute, at that time, were quite gloomy; so much so that Mr. P. B. Dexter, who then ns now filled tbe position of Librarian aad Cor. Secretary, with a view of aiding the associatioa, gencrously offered gratuitously to perform the duties pertaiuing to his offices, until such an improvement in the affairs of tbe Institute should take place as would enable it to compensate him, without increasing its liabilities. It appears that the receipts and expenditures of the association, for the year ending on the 4th of February, were as follows:—

Total receipts for the year $2,448.98
Disbursements for the year 2,121.50

Leaving a balance of $ 323.48

About 400 volumes were added to the library, 172 of which were purchased, the remainder being donated.

The following officers were elected for the ensuing year: John Sime, Pres.; Gardner Elliott, V. P.; P. B. Dexter, R. S.; J. E. Kincaid, T.; H. F. Williams, C. S.; Daniel Van Pelt, G. D. Street, C. L. Taylor, J. A. Banks, Wm. McKibben, Eli Cook, and J. E. Davis, Directors.

The officers chosen at subscquent annnal clections were ns follows:

1858—John Sime, President; Daniel Vnn Pelt, Vice President; P. B. Dexter, Recording Secretary; H. F. Williams, Corresponding Secretary; John E. Kincaid, Treasurer; Thomas Tenneat, B. H. Freeman, John N. Risdon, Peter Donahue, J. D. Pierson, A. E. Phelps and Henry McNally, Directors.

1859—George Cofran, President; Geo. D. Street, Vice President; P. B. Dexter, Recording Secretary; W. F. Herrick, Correspondiug Secretary; John E. Kincaid, Treasurer; Thomas Tennent, C. S. Hobbs, T. S. Oldham, Gardnor Elliott, Franklin Knox, Benjamin Dore and Wm. Parker Taylor, Directors.

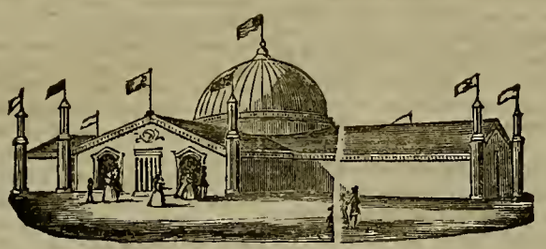
1860—Thomas Tenneut, President; John W. Cherry, Vice President; P. B. Dexter, Recording Secretary; W. F. Herrick, Corresponding Secretary; John E. Kincaid, Treasurer; Gardner Elliott, Benjamin Dore, Paul Torquet, Henry L. King, John P. Buckley, James A. Sperry and A. H. Houston, Directors.

1861—John P. Buckley, President; Wm. McKibbin, Vice President; P. B. Doxter, Recording Secretary; J. A. Magagnos, Corresponding Secretary; John E. Kincaid, Treasurer; John R. Sims, G. W. Gilmore, C. M. Plum, Aaron Doud, Paul Torquet, Frank Eastman and Nathan Porter, Director.

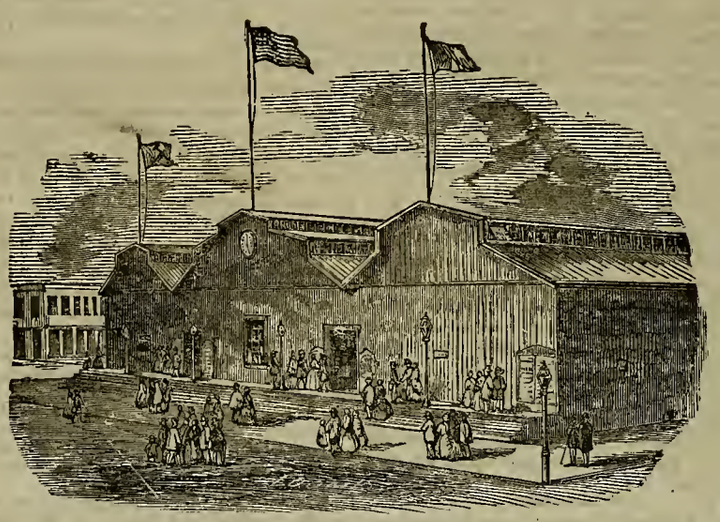
1862—B. H. Freeman, President; Paul Torquet, Vice President; P. B. Dexter, Recording Secretary; H. F. Williams, Corresponding Secretnry; John E. Kincaid Treasurer; Wm. Birny, Jos. Britton, Wm. T. Garratt, D. B. Hinckley, W. H. Howland, John Roach and N. P. Perine, Directors.

1863—Joseph Britton, President; Alexaader Buswell, Vice President; P. B. Dexter, Recording Secretary; H. D. Dunn, Corresponding Secretary; J. O. Hanscomb, Treasurer; E. N. Torrey, D. A. McDonald, David Stoddart, Wm. Hawkins, S. S. Culverwell, P. J. O'Connor aad A. C. Austin, Directors.

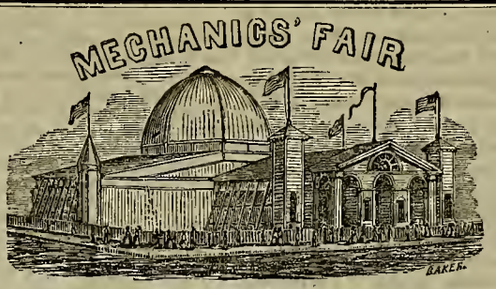
1864—Joseph Britton, President; A. S. Hallidie, Vice President; P. B. Dexter, Recording Secretary; H. D. Dunn, Corresponding Secretary; Edward Nanan, Treasurer; P. J. O'Connor, W. H. Knight, C. R. Steiger, E. N. Torrey, W. H. Bryan, H. F. Williams and Jas. A. Pritchard, Directors.



MECHANICS' PAVILION OF 1858.



MECHANICS' PAVILION OF 1860.



PAVILION OF 1864

THE FIRST INDUSTRIAL EXHIBITION.

On the first day of May, 1857, a circular was issued by the Executive Committee, giving notice that the First Exhibition of the Institute would be held in San Francisco, to eommence on Monday, the 7th day of September, and continuing at least ten days.

In the effort to find a suitable building in which to hold the Fair, it was discovered that the city did not afford one. It was then determined to erect a temporary structure which should answer the purpose. At this juncture MR. JAMES LICK came to the aid of the Institute, and generously tendered the free uso of his convenient block on Montgomery street, the same on which now stands the Lick House. After much consideration a design was accepted from Messrs. Clark & Keuitzer, architects. The general plan was that of a Greek Cross, surmounted by a large swelling dome, ninety feet in diameter. The structure covered about 20,000 feet of ground. A correct representation of this pavilion is given on this page. The Fair was held, ns per appointment. The opening address was delivered by Henry F. Williams, a member of the Executive Committee, and a poem was written for the occasion and delivered by the lamented Edward Pollock, Esq. Some extracts from this poem will be found in another column of our present issue. The closing address was pronounced by the President, Mr. John Sime, Esq. The financial report of this exhibition reads as follows:

Total receipts from all sources $22,347.63
Total expenses 17,969.20

Leaving a balance of $ 4,378.43
From which was subsequently paid for printing Report 1,500.00

Leaving a net balance of $ 2,878.43

The pavilion was allowed to stand, and was used for the second exhibition, which took place the ensuing year. This building, and other property of the Institute, exclusive of the library, was then valued at $5,390. The number of articles exhibited at the first Fair of the Institute was 941.

The California Horticultaral Society held its first annual exhibition in the same pavilion, in connection with the Institute.

The third annual report was presented by the President, John Sime, Esq., on the 5th day of March, 1858, from which it appears that the prospects of the Institute, had, at that time, assumed a much more favorable appearance.

On the 17th of April, 1858, the Executive Committee issued a circular announcing that

THE SECOND INDUSTRIAL EXHIBITION

would be held at the Institute Pavilion, commencing on Wednesday, September 1st, and continuing open fifteen days. The State Horticultural Society again joined with the Institute in holding *their* second exhibtion at the same time and place. The opening address on this occasion was delivered by Jas. A. Banks, Esq., and the closing address by Rev. A. H. Myers, of Alameda. The whole number of articles exhibited on this occasion was 682. The receipts of this second exhibition amounted to $15,541.50
Expenditures 13,569.43

Net balance $ 1,972.07

The list of members of the Institute, as published in the report of this second exhibition, numbers 452.

From this time until the summer of 1860, a period of nearly two years, the records of the Institute present no features of especial interest. The organization was conducted in a quiet unobtrusive manner, gradually increasing its library, and keeping up its membership. Much good was effected by the influence which the Association exerted over its membership and over the mechanical interest of the city generally. The benefits of the library were enjoyed by a large number of persons, mechanics and others, who were not enrolled as active members of the Institute.

Early in the spring of 1860, the proposition began to be discussed for holding a

THIRD INDUSTRIAL EXHIBITION.

This step was finally resolved upon, and an arrangement made with Mr. Lick for a new lease of his lot on Montgomery street, for the purpose of putting up another Pavilion, the old one in the meantime having been removed. This structure, a correct representation of which has been furnished by our engraver, and placed immediately under the view of that erected for the two previous exhibitions, was parallelogram in shape, occupying 150 feet on Montgomery street and extending 200 feet on Sutter. Its cost was $8,450. The Exhibition opened on the 3d of September, under quite flattering auspices. The opening address was pronounced by J. W. Cherry, Esq. Notwithstanding the hopes of success which attended the initiation of this Exhibition, though highly creditable to the skill and industry of the city and State, it was far from a pecuniary success. The receipts fell some two or three thousand dollars short of the expenses, and placed the Institute under quite embarrassing circumstances.

From this time until the fall of 1863, a little less than one year ago, the Institute was in a languishing condition—in debt and discouragement. In the spring its income had become reduced to $50 per month, *below expenses*, and the Association was actually considering whether it would be better to sell its library at public auction to pay its debts, and disband, rather than make another effort to recuperate and place itself once more in a condition to benefit itself and the community by an active existence. About this time the landlord's calls began to be pressing and the Institute received a pretty direct notice to vacate the building which it occupied. After several meetings of consultation, and under the influence of a few of the more energetic members, the Institute wisely resolved to keep up its organization, and to put forth its most determined energies to extend its usefulness and deserve a generous support from the public. Mr. Joseph Britton, the active and efficient President of the Association, was at once empowered to carry out a series of measures which he had himself suggested, to accomplish the desired end.

In the meantime the books and other effects of the Association were stored and the building on Montgomery street given up, while the President and other members of the Institute went energetically at the work before them.

Numerous meetings were held; public sympathy was attracted to the efforts which the Association was making to help itself, and the result was soon made manifest in the elegant and convenient suit of rooms, now occupied by the Institute in a building belonging to itself and yielding a monthly rent of $100 in addition to the occupancy of the Association. The result has been very gratifying, not only to the parties most directly interested, but to the entire community as well. The lot and building, has cost the Institute $15,323, all of which, we believe, has been paid up, with the exception of $6,000, which is secured by a mortgage on the premises.

FIRST MEETING IN THE NEW BUILDING.

On the evening of October 28, 1863, the Institute met for the first time in their own building. The meeting was fully attended. On calling it to order, the President, made some appropriate remarks, congratulating the members on the work they had accomplished. The membership at that time was stated to be 550, the monthly dues for which reached $275, which together with $100 per month rent from the lower story of the building, gave the Institute an income $375 per month. Energetic steps were taken at that meeting to still further increase the funds and income of the Institute, which have met with decided success. The propriety of holding a Fourth Industrial Exhibition was first suggested on this occasion.

At the close of the year a series of lectures was given which netted about $1000.

Upon re-opening the Institute in their present building, about 900 additional volumes were purchased for the library, and many others were gratuitously furnished by friends of the Institution. The library now contains about 7,000 well selected volumes, and the Reading Room is well stocked with a large number of useful and valuable periodicals, devoted to news, general miscellany and mechanics. The Institute as it now stands, is one of the proudest and most useful institutions for good on the Pacific Coast—the pride of our city, and an honor to her mechanics.

THE FOURTH EXHIBITION.

On the 19th of January, 1864, a meeting of the members was called with especial reference to considering the propriety of holding a Fair or Exhibition during the present autumn. After frequent meetings and much discussion, the plan for holding the proposed exhibition was fully matured. How successfully this plan has been carried out, let the noble edifice in which we are assembled today, with the tangible evidences of our skill and industry on every side speak for themselves.

A TRIFLING MISTAKE.—An old lady—a tolerably good representative of Mrs. Partington, while examining the many curious objects at the Mechanics' Fair, yesterday, had her attention attracted to a very neat model of a feathering float paddle-wheel, in which by some accident one of Grover & Baker's sewing machine cards had been placed. The old lady picked up this card, supposing that it contained some description of the machine, wiping her spectacles and placing them on her venerable nose, she read the card, from which her eyes wandered to the machine in evident bewilderment, till finally, credulity conquering scepticism, she exclaimed in evident delight, "La, is that one of Grover & Baker's sewing machines! I never should have thought it! Well, I declare. I have heard that this great firm have so improved their machines that they make them do all kinds of sewing, but I did not think it possible that they could make them sew without needles or thread—but there is no limit to these Yankee geniuses!!

THE PRESS AT THE FAIR.—The faithful reporter of the *Evening Bulletin*, (the sheet which furnishes us the latest telegraphic items) gives us the following *clever* notice:—

William P. Harrison has a job printing press in operation, and the *Scientific Press* proprietors strike off and give away thousands of their little sheet, entitled *The Mechanics' Fair Daily Press*. The second issue of this paper, published last night, gave the multitude some intelligence of the *Washoe* disaster. There were great crowds all the evening about the telegraph and the presses, many of whom had their first sight at the practical working of these great motors of civilization.

School of Mines.

A school of mines is about to be established in connection with Columbia College, of New York City. It will go into operation on the 15th of November next, and will supply a want which has long been felt in that great metropolis of the Union. It is to be hoped that circumstances will soon be such as to admit of the establishment of a similar institution in this city. Those who are engaged in mining operations, both here and at the East, look in every direction for mining engineers, and those properly conversant with the management of the varied operations connected with the business of mining they generally look in vain for one of our countrymen so fitted. Resort is generally had to some person of foreign birth, or at least to one who has obtained the necessary qualifications in a foreign school. Often, because of this lack, capitalists lose large amounts of money by committing their interests to incapable men. It is only by placing our mines under the management of capable and efficient men that they can be made certainly productive. We have the richest mineral country in the world, and stand second in extent of our actual operations; yet we have not a single school in all the land devoted to fitting our young men to enter this great field of enterprise! It is wrong that our young men should be compelled to go abroad for that which it is a high duty we should teach them at home. The New York *Post*, in speaking of the importance of the school about to be established in that city, makes the following pertinent remarks:

Without theoretical knowledge there can be little forethought and economy in practice. Unfamiliar circumstances are bewildering, and lead to disastrous experiments. In the beginning of art there is always a characteristic waste of time, money and material. It is our business at present to learn to save. Our finances demand a general and judicious working of our mines. This can only be achieved by learned and discriminating engineers, whose judgment, ripened by education as well as experience, will prevent futile essays. The utility of scientific schools is more keenly felt, or more heartily acknowledged, after they are in operation than before; nevertheless the feeling of the public at present is favorable to them. Our gigantic war has made our thoughts more comprehensive and generous, and schools of applied science are springing up in many States under the immediate patronage of the legislatures.

In foreign countries the schools of mines are usually national, and there is no European state so small as to be deficient in them. But the mines are for the most part owned by the governments, who furnish experts for their due working and conservation. Our citizens own our mines; it is, therefore, fit for them to encourage the formation of a class of engineers so important to private and public interests. Columbia College asks for the encouragement of the public in this enterprise. It will receive with gratitude gifts of minerals, models and moneys, because at this time it is not able itself to do all that is desirable for the school.

The College has elected to the principle chairs the best instructed men to be found; some of them are graduates of the famous Imperial School of Mines at Paris, others are distinguished graduates of West Point.

With this force of professors, the standard of instruction here will be as high as it is abroad. The constant communication which the school already holds with foreign schools and engineers will keep it promptly informed of all the novel ideas and experiments in other parts of the world, while the results of our own lively invention and intelligent research will contribute more brilliantly to our glory and usefulness, by having a center from which they can emanate to others with the stamp of a recognized institution.

NEW MINERAL SPRINGS.—It is said that some new mineral springs have been discovered about ten miles from Santa Clara. The waters are said to be of very superior health giving qualities. It is rumored that Leland, of the Occidental, is to build a hotel near by. A large quantity of land adjoining the springs has been pre-empted for the purpose of the necessary buildings, grounds, etc. California no doubt abounds in medical springs, many of which, even if discovered, are not yet known as possessing any healing virtues.

THE OPENING OF THE FAIR.—Hon. John Conness delivered the opening address for the Fair of the Mechanics' Institute at Platt's Hall, according to announcement, on Friday evening. The address was listened to by a crowded house. It consisted merely of an interesting historical account of the rise, progress and development of the industrial interest of California. The address will be found, entire in this paper. The Pavilion was opened to visitors at 11 o'clock on Saturday morning, although many of the exhibitors were not ready. The large amount of heavy machinery which has been introduced requires more time for its erection than was anticipated.

In the evening the streets, houses and grounds adjacent to the Pavilion were crowded to witness the display of fire-works which were prepared for the occasion. The two principal pieces were particularly appropriate; the first an inscription "Mechanics' Institute, 1864," surmounted by a large wreath, inclosing an artisan's arm wielding a sledge. The second piece was a representation of a colossal beehive, with the motto, "By Industry we Thrive." The Pavilion itself was lighted up and crowded with men, women and children. The exhibition may now be considered fairly inaugurated. It will prove a grand success.

THE CONTENTS OF THE PAVILION.—For the purpose of conveying as much information as possible to those who may be unable to visit the present Fair, we propose publishing in the MECHANICS' FAIR DAILY PRESS and the MINING AND SCIENTIFIC PRESS a list of the most interesting objects on exhibition, which for convenience sake we shall divide into six different departments under the following heads:—Raw Materials, Manufactures, Machinery, Natural Productions, Works of Art, and Miscellaneous. This plan we think will greatly aid the general reader to comprehend the number, variety and extent of the contents of the building erected for the fourth Fair of the San Francisco Mechanics' Institute. To this end we have secured the services of a gentleman conversant with each branch.

THE THREE PAVILIONS.—We have deemed it a matter of sufficient interest to our readers to give in our present issue, for permanent record, a correct illustration of each of the three pavilions which have been erected by the Mechanics' Institute of this city, for the convenience of their several Industrial Exhibitions. They will be found upon our first page, (the third pavilion being in the head of our Fair paper,) and will be recognized by all familiar with those structures, as correct representations.

A DOUBLE APPLICATION OF ONE PRINCIPLE.—Two brothers named Salmon, exhibit at the Mechanics' Fair, a Patent Churn and Patent Amalgamator, both working by the application of the same principle. One has to stretch the imagination considerably to comprehend the connection between the extracting of butter from cream and gold from quartz; but these ingenious machines demonstrate that the same power that can perform one operation is adopted for the other.

CHINESE COTTON.—In our list of raw materials on exhibition at the Fair, we might have included a very fine specimen of Chinese cotton, exhibited by Chy Lung & Co., Chinese merchants on Sacramento street. But as cotton is never likely to become an article of home manufacture, and its history, properties, and the consequences its cultivation has brought on the country are so well known—we did not refer to it—particularly as the sample was imported.

WHAT NEXT?—A genius—a regular Yankee as a matter of course, has on exhibition at the Mechanics' Fair, a machine for roasting coffee, which moves by clock work, and will keep constantly stirring from an ounce to a bushel of coffee so as to secure its being browned to perfection.

A ROPE WALKER announces that he will walk on a rope over Niagara Falls, on steel stilts.

THE EXHIBITION A SUCCESS.

The grand Industrial Exhibition is attracting large crowds of men, women and children to the Pavilion. The attendance on Saturday night was between three and four thousand. The number of visitors since has constantly increased. The exhibition is already a success, and by far the most extensive and creditable which has ever been presented on the Pacific coast. The visitor is completely lost in bewilderment at the vastness of the area, the almost endless variety of the exhibition and the interminable extent of avenues which have been most judiciously laid out in graceful meanderings among the profusion of tables, stands, pyramids, showcases, columns and cosey little recesses which appear and disappear by turns, as the admiring visitor threads his way along the mile and a half of distance which he must traverse to make the full round of this glorious palace of California industry. Of course no one or two visits can convey any adequate conception of the extent, variety or interest of the exhibition. Every department should be made a study, and visited again and again. If the reader will follow us carefully through our daily reports, which we intend to make as full and complete as a month's constant attention will admit, he will doubtless find many a hint thrown out with regard to the various articles on exhibition, which none but the practiced skill and observation of a professional reporter would be likely to discover.

The managers deserve the highest credit for the taste and judgment they have thus far displayed in the arrangement and conduct of the exhibition. Refreshments are provided for the hungry, and mild potations for the thirsty; while the lovers of music will be entertained, during the evening hours, by bands of music stationed just in front of the central floral display, and under the south side of the great dome of the Pavilion. The view from these galleries is very imposing.

Taken as a whole, Californians may well be proud of this grand exhibition of their skill, industry and taste. It is most emphatically, what it was designed to be—an exhibition of California industry. Those who have witnessed the previous exhibitions in this city, cannot fail to notice the marked superiority of this over either of its predecessors, in the way of a prominence of home over foreign industry. This distinctive feature forms a most interesting subject for gratulation, and affords the most indubitable evidence of the rapid progress which this new State is making in those great industrial pursuits, without which our gold would be as dross and our silver as worthless stones. The present exhibition will form a most important era in our history as a State, and we trust will stimulate to still more important exertions in the great race of progress which we are now so successfully making with the older communities of the Atlantic States and Europe.

How is It.—Is not the Mechanics' Institute of this city entitled to the "premium" for the largest and best Daily Fair Paper ever issued from any Industrial Exhibition in any part of the world? How is it? Is there any committee of one or more competent to report correctly upon this point? If any one can refer us to an organization better entitled to the premium, we will subside. If not, we claim for the San Francisco Institute the "feather."

Limberger Cheese.—This loud smelling substance, considered such a luxury by many, is prepared in this State by making ordinary cheese and burrying it under heaps of manure, till the odor of the pile has been thoroughly imparted to the cheese. The more rank and offensive the odor the more delicious is the cheese considered by epicures. There is no accounting for taste, particularly for such a taste.

Monthly Dividends.—The monthly dividends on the capital stock of the Savage and Gould & Curry Companies, declared Saturday amount to $50 each per foot.

IN MEMORIAM.

We republish the following beautiful lines, written by California's truest poet, the lamented Edward Pollock, at the opening of the Industrial Exhibition of the Mechanics' Institute in 1857. Like choice wine, this product of genius seems to improve with age, and is as applicable in many of its points to the Fair of to-day as to that given seven years ago.

Kings hold their courts, and Presidents
At lovees show their several beats
For shrewd intrigue, or for display,
As best in crowds of fools they may;
In stainless uniforms appear
Our harmless soldiers once a year;
Through mud, (for Nature never yet
Saw Firemen but her eyes were wet,)
In shirts well sprinkled—red or blue,
Or clad in capes of darker hue—
Still, once a year, with splash and noise,
To man the ropes, come forth the "boys";
Well pleased at each procession's close
To calm their quarrels, soothe their woes,
By swallowing, in forgiving vein,
Frank Whitney's chowder and champaign!

The Politicians—harmless souls!—
The night before they sought the polls,
Were wont, till lately, to disclose
In line their forces to their foes.

The Clergy—may their tribe increase—
Each Sunday don their robes of peace,
And mark with due precision down
The gathering evils of the town.

The mournful Doctors, save or slay,
With pomp, their patients every day.

The Lawyers, (to which saintly throng
I, for my many sins, belong,
But ne'er forgetting, nor should you,
That I am a Mechanic too);
The Lawyers, with a learned air,
Diurnally to courts repair,
And there do—nothing!—with such grace,
And formidable length of face,
That at their slow, mysterious nod,
Their beaten clients must applaud.

Shows all—all shows—so let them pass,
Swift images along the glass.
We envy not the courtly air
Of princes, pranked and debonair;
We envy not the proud display
Of any White-House gala-day.
And why? Because in manhood's pride—
Young beauty blooming by their side—
Our best may say, with fearless brow,
To each, to all around them now,
"Away with ball, or court, or throne!
To-night, Mechanics, is our own."

The holy night when homes are sweet;
When fire-side circles fondly meet;
When smiles, and light that seems a smile,
And cheerful talk, the hours beguile;
And joy, as of a battle won,
Comes with the sense of duty done;
And strong resolves for further toil
Succeed remembrance of turmoil;
And calm delights, that seem again
To freshen, as with genial rain,
The social Eden's dusty bowers;—
Such nights, Mechanics, all are ours!

What pictures does the mind recall
Of scenes like these, endeared to all!
Work done, and tools bestowed aside,
The HOME is sought with honest pride.
The fire is bright, the table spread,
The lamps their cheerful radiance shed;
The grandsire, spectacles on nose,
Half reads the paper in a doze;
The school-boys, leaving tops and drums,
Bring forth their slates and "prove" their sums.
The sweet young wife displays with glee
The baby that adorns her knee,
And mother's hand pours out the tea.

In such night-scenes we found our joys
When we were all apprentice boys;
In such night-scenes we found again
Our joys as working journeymen;
And here, on this Pacific Coast—
Our land, and all it holds, our boast—
Is it not fitting, fair and right
Our Institute should choose the night
To first present her name to light!
To say—"Beneath yon moon-lit dome
Artistic labor finds a home!
No sunshine need his curves adorn,
For eve is the Mechanic's morn."

What need to praise, upon my part,
The genius of Mechanic Art?
She speaks—from quarries, woods, and mines,
Behold, like light a city shines!
She waves her wand—the seas are white
With ships impatient in their flight!
Her finger traces—and its course
Is followed by the iron horse!
Through the deep seas, from which the heart
In wildest phantasy will start,
She looks—and lo! the magic wire
Transport her messenger of fire!
For her the blacksmith swings his sledge,
The builder grinds his hatchet's edge,
All workmen labor as she says:
All matter her behest obeys;
All shapes are facile at her nod,
From the rude cabin—logs and sod—
To temples of the living God.

Mechanics! to your hands we owe
Whatever we behold below,
From nature taken, and designed
To suit the changing human mind.
And more, Americans! Our State,
So young, and yet so proudly great,
In peace or war, an always true
Support, defence, demands of you;
And all who love the UNION pray
That, 'till the earth shall pass away,
Her strong armed sons may ever be
Industrious, honest, brave and free.

Shade and Sunshine.—Were you ever in a state of despondency, good reader? clouds overhead, shadows on the heart, gloom all around, when suddenly something, somebody, stepped in, like a streak of summer-shine, to drive away melancholy, brighten up the brain, set the blood coursing through your veins like a merry brooklet, and make all your surroundings a scene of happiness and beauty? Did it go away again, suddenly, as it came, leaving behind a pall of deeper darkness, filling the soul with doubts and misgivings, foreshadowing the bridal or the grave, you know not which, hope vainly struggling to lift itself above despair, the mind at sea without a rudder, the whole body as it were frozen in a moment, even with a smile upon its lips, by the mere touch of any icy wand? If you have experienced these things, then you know something of the difference between shade and sunshine, the immortal shade and sunshine, which come and go we scarce know how or why.

The Progress of Discovery.—The many and so differently constituted apparatuses for separating gold and silver from the rock, after it has been crushed, to be seen on exhibition at the Mechanics' Fair, afford a striking illustration of the extent of the investigations and progress of this most important branch of science.—Some of these amalgamating machines, as they are generally termed, are constructed on strictly scientific principles, while others—and not the least useful by any means—are constructed on the results of the observations of experienced practical men. Although an apparatus meeting all the requirements of miners has not yet been constructed, the exhibition of so many of those recently introduced to notice, in operation side by side, as they are at the Fair, must by exhibiting the advantages and defects of each, greatly aid the inventor in his labors, as they certainly do exhibit the progress of discovery in this branch of science.

The Old King the Best.—While examining the various kinds of washing machines on exhibition at the Mechanics' Fair this morning, an individual, who appeared to take a profound interest in their construction, examining them all most minutely, after concluding his investigations, came over to where we were standing, and drawing a long breath, as if a weight had been taken from his bosom, said in a sort of half confidential manner: "Say, Mister, don't you think, after all, that the old kind of machine which combines the washing with the sewing machine and which locomote themselves about, are the best and cheapest for a single man to procure?" That fellow had such a clear conception of the case, we at once concurred, though several of the machines on exhibition at the Fair are well contrived for the purpose of washing.

Interesting Scientific Discovery.—One of the most curious and interesting of the recent discoveries of science is, that it is to the presence of a very small proportion of watery vapor in our atmosphere—less than one-half of one per cent.—that much of the beneficent effect of the heat is due. The rays of heat sent forth from the earth after it has been warmed by the sun would soon be lost in space but for the wonderful absorbent property of these molecules of aqueous vapor, which act with many thousand times the power of the atoms of oxygen and nitrogen of which the air is composed. By this means the heat, instead of being transmitted into infinitude as fast as produced, is stopped, dammed up and held back on its rapid course, to finish the necessary conditions of life and growth. Let this moisture be taken from the air but for a single summer night, and the sun would rise next morning upon a "world held fast in the iron grip of frost." But the power of absorption and radiation in the same body are always equal, so that at length it is poured forth into space, else our atmosphere would become a vast reservoir of fire, and all organic life be burned up.

Paul Torquet's Will.—The will of Paul Torquet was admitted to probate yesterday, upon the application of his wife, Sophia Torquet, John Melville, and Richard Ivers. The estate is supposed to be worth between twenty and twenty-five thousand dollars.

More Hieroglyphics.—We yesterday learned from a gentleman just down from the mountains that more hieroglyphics have been discovered near the head waters of the Yuba, upon some rocks on the Dutch Flat road, about half a mile to the eastward of the Summit, on the right hand side of the route, and just after passing through a cut in the rock. The inscriptions are made upon the face of a granite rock looking towards the road and about 100 feet distant on the right hand side going eastward. They are undoubtedly of comparative recent date, although their appearance would indicate that they were made anterior to any modern settlements on this Coast. Among the figures are what appears to be a double heart, an anchor, and something supposed to represent either a clock face, or a capstan. The inscriptions appear to have been made in some ancient characters—such as Arabic or something of that kind. Would it not be well for some of our *savans* who are passing over the mountains to take a look at these supposed inscriptions.

The Consumption of Coal in England.—From carefully compiled statistics collected by order of the British Government, it appears that the annual consumption of coal in that country exceeds 35 millions of tons annually, estimating the ton of coal as measuring a cubic yard it would require a vein three feet thick and eleven square miles in extent to supply this quantity. At such a rate of consumption, should the whole Island be formed of coal, it will all be "used up" almost before the coal fields of this country shall have been examined.

Modes of Threshing.—There is scarcely a fact that furnishes so strong a contrast between European and American civilization as the agricultural implements invented and used in the two countries. At this very day the peasants of Eastern Europe thresh their grain by the treading of horses or cattle, and in many parts of even England and Scotland, the labor exacting flail is still employed for the same purpose, while in all parts of the United States machines driven by steam, water or horse power, thresh the grain cheaper, cleaner, and more effectually.

Splendid Music.—Music 'tis said soothes the breast of a savage; such beautiful strains as are nightly poured forth by Frisbie's band at the Mechanics' Fair are sweet enough to soothe the soul of a saint, though we see crowds of sinners seeking its influence. San Francisco never before could boast of a band such as this, every member of which is eminent as a performer on the instrument on which he plays. The music by Frisbie's band is one of the ready attractions of the Fair, and well it may be, for it is really splendid.

The Telegraph at the Pavilion.—The State Telegraph Company have erected a booth at the Pavilion and put in a battery. Telegraphic communication is now established between the Pavilion and the "rest of mankind." Several fine telegraphic instruments, manufactured for the company, are exhibited. The company also exhibit the first telegraphic register used in California. Its rough and dingy appearance is in striking contrast with the highly finished and improved instruments now used.

"The Victory Not Always Won by the Strongest."—This old truism was well illustrated yesterday, by the committee of arrangements of the Mechanics' Fair, ordering the Limberger cheese to be carried out of the pavilion. Its abominable stench rendering it an absolute nuisance.

Hot Springs.—On Reese River there are twenty-five hot springs, from milk warm to boiling hot, and they measure from ten to one hundred feet in diameter, and from one hundred to one hundred and eighty feet in depth.

Presentation.—The great cheese, at the Pavilion, will be formerly presented to the U. S. Sanitary Commission, at 9 o'clock this evening. Rev. Dr. Bellows will respond in behalf of the Commission.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Sept. 10th, 1864.

The mining share market has been exeeedingly active the past few days and with scarec nn exceptiou nll stocks were dealt in at cnhanced rates. One or two leading shares have hecn frcely offercd and sold at material decline, hut without unfavorably influeneing the general market which exhibits more strength nnd huoyancy than for some time past. Many dealers aro of the opinion that considerable spceulation is now likely to eusue, whieh may advanee prices still lnrther. Short sellers in a eertain prominent elaim have made money rceently and huyers for a rise in nearly all others have no reason to complain of the present complexion of the market.

Reeeipts of Bullion this week from the interior are fully up to the average, and so far as we ean learn, no abatement in the aggregate yield of the mines of Nevada Territory and elsewhere is looked for at present. The money market is uuehanged, and although a fair degree of aetivity prevails, horrowers are rendily accommodated at curreut rntcs of interest, upon first elass securities. Some important loans were made this week hased upon mining stoek collaterals, and ncgotiations of this eharacter are effected with rnther more facility than formerly.

Gould & Curry has been largely sold and 62½ feet ehanged hands, opening (on Saturday last) at $1,460, steadily declining the past few days to $1,200 ex-dividend, slightly rallying to $1,235, huyer 30, nnd closing last evening at $1,225. Reeeipts of Bullion siuce the 1st inst., exceed nn average of $6,000 per day. The eompany are still drifting east from shaft No. 3, at n depth of 100 feet below the lower tunnel, and immediately heneath grounnd claimed hy the North Potosi Compauy. The new 50-horse power engine loeated in the lower level, will he at work in a few days, whieh will it is thought greatly facilitate operations in this part of the mine, nnd do away with the present hand power.

Savage is in hetter favor and advaneed during the week from $1,290 to $1,350 ex-dividend of $50 per foot paid on the 6th inst, and closed yesterday at $1,300, nsked. This Company had a surplus of some $30-000 on hand after the payment of their last dividend, and for the eurrent month, receipts of Bullion will it is said equal those of any former like period.

Potosi fell from $800 to $750, rose to $850, then reeeded to $800' and is now held with some firmness nt $850. The suit of this Company against the Bajazete, and that of the latter *vs.* the former Company, will come up before Judge Mesiek, ns n referee in both eases, on Monday next.

Chollar continues to be regarded with especial favor and steadily advanced from $550 to $675, seller 30, and closed yesterday at $665—47 feet changing hands. The new deposit disclosed in the S. W. drift, is said to improve daily. The vein at this point hns not been thoroughly explored as yet, but a large chimney of valuahle ore, will, it is belived, he found at an early day. A side drift, 40 feet in length, revcnls fine black sulphuret nnd greyish ehloride ore, throughout this entire distanee, and shafts will at onee he sunk to fully test this portiou of the mine. A late erushing of 150 tons of ore from the 4th level in the North Mine, yielded $51 per ton. During the ensuing week, it is proposed to hoist some 25 tons daily from the South Mine, nnd about 50 tons from the old works. Telegraphie dispatches state that the West wall of the ledge in the 5th level has been reaehed hy the drift from the bottom of the shaft, the vein at this depth being nearly perpendicular.

Belcher has heen inaetive and weak—$625 was hid, yesterday—$800 asked. We ean learn of no unfavorable feature in the eharaeter of this elaim, but certain work is necessary to he done, hefore the mine can be plaeed in n paying eondition again.

Ophir has hecn more active and 21 feet were sold, declining from $490 to $475 and closing at $475 asked. The Central Shaft is now down 115 feet below the level of the 7th gallery. Receipts of Bullion from the mine are averaging some $2,000 per day, which nro more than suffieient to meet current expenses.

Hale & Norcross was sold at $490 nnd is now offered nt $475. In the drift from the 545 feet level the porphyry formation has disappeared and clay and quartz have heen met with, the latter eontaining a trace of silver. Present indieations are thought to be quite favorable. Yellow Jaeket was sold yesterday to the extent of 15 feet at $410 (an assessment of $110 delinquent.)

Imperial is strongly held and 62½ shares were sold at from $141 to $143½. The yield of Bullion for the current month, is likely to reneh an aggregate of $120,000. The Rhode Island Mill is now crushing ore for this Compauy. An additional 50 feet level has heen opeued in the Alta ground, developing another large body of good pay minernl. A dividend of $10 per share is talked of for the month of Sept.

Sheha advaneed early in the week to $95@$100, then declined to $65, rallied to $70 and closes at about $70. 145 feet were sold. The Company's Mill is at work reducing some 8 tons per day and the result thus far is said to he satisfaetory—1,000 tons of 2nd class ores (by euhie mensurement) are on hand at the mine and ean, it is thought, he successfully treated hy the proeess now adopted. A new deposit of rieh mineral, equal to the one diseovered last fall, has been found in the east drift No. 2.

Wide West has been exeeedingly aetive nnd large sales were made advnneing from $22 to $34, reeeding to $27½, seller 30, nnd closing last evening at $30. 1025 shares have been dealt in. Telegraphie dcspatehes state that reeent developmeuts have disclosed a large quantity of good ore and that the Company's fine Mill can now he regularly employed. The prospects of the Company nre thought to bo more promising.

Lady Bryan has revived somewhat and 1250 shares were sold, advaneiug from $5 to $6½ and closing at $5. Buring Moseow rose from $20 to $23 and sold last evening at $20½—259 shares have beeu dealt in.

North Ophir rose from $16½ to $25, 75 shnres changed hands Santa Rosa nd vanced from $17 to $30. North American has been steady at $25. Seneca was sold nt $7@$8, and North Potosi nt $15½, an nssessment of $12 50 delinquent.

Antelope rose from $12 to $14, and fell to $13; an assessment of $10 per share was levied on the 7th inst. Josephene (Coso) rose to 3¾, fell to $2½, nnd rallied to 3½, 90 feet ehanging hands. Real del Monte was sold nt $18½@$19; 50 feet being dealt in.

Daney is in hetter request and rose from $30 to $35. The Compnny are running a side drift, east and west on the vein, from the hottom of the main shaft 200 feet in depth.

California Steam Navigation suddenly rose from $43 to $59@$60, owing to the disaster to the Washoe, but we learn that nn oppositiou hoat on the Sacramento River will be running at an early day.

Legal Tender, Notes nd vanced yesterday to 45 nt whieh rate $5,000 were sold. San Franeiseo Gas is steady at $85 to $86; 50 shares were sold nt the latter rate.

The aggregnte sales of Stoeks nnd Legal Tender Notes since Saturday last, amount to $271,370.

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—Eds. Press.]

Those marked with an asterisk (*) are advertised in this journal.

Mechanics' Industrial Fair.

Reports for the Week.

The following information concerning the Mechanics' Industrial Fair, is taken from our *Daily Fair Press*, printed and issued at the Pavilion. The reports were prepared by a special reporter.—[Ens. Press.

Tuesday, September 6th.

MACHINERY.

Owing to the large amount of machinery which exhibitors desire to place in the Fair, it has been impossible to have everything in readiness at the start. Indeed it will be some days yet, before all the heavy machinery will be in its place and in running order. The large steam engine which is to drive the chief part of the machinery is not, at this present writing, in running order, although we are assured it will be by the time these lines reach the public eye. Some other matters of small moment also, remain to be done in other departments, ere the entire exhibition is in perfect order; but workmen are constantly busy putting things to rights. All this, however, but adds interest and zest to the exhibition. The operation of putting up shafting, setting up and arranging machinery, etc., etc., is of itself a most interesting part of the exhibition, and makes it all the more an *Industrial* Fair.

In making up our report we propose in the first place to go through the various departments, briefly noticing everything we meet; after which we shall again pass along, and note more particularly the most prominent features of the exhibition. Much of the machinery will also be illustrated from time to time, as the engravings are prepared and placed in our hands. The advantages of such illustrations, accompanied with full descriptions, must be apparent to those most particularly interested, and will be found of much interest to our readers and all visitors at the Fair. We shall commence our introductory review with the

MINING MACHINERY.

Commencing at headquarters we have, in the first place a fine steam engine of 50-horse power, working with Green's Patent cut off. This engine is exhibited by the Pacific Foundry, of this city, at which establishment it was manufactured. The engine is finely finished and is a most creditable piece of workmanship.

Next in order comes the various quartz reduction works; and first we have one of Bryan's five stamp batteries, manufactured at the Pacific Foundry, and exhibited by the proprietors of that establishment.

The Vulcan Foundry exhibits a rotary crusher, the same being an improvement on Howell's patent, by Mr. Moore. This machine reduces the quartz by rotary beaters, driven at immense velocity. These beaters striking the particles of quartz as it is thrown into the machine, reduce it at once to an impalpable powder. It has recently been introduced with great success at the Pike's Peak mines.

Mr. W. W. Hanscom, of the Golden State Foundry, will exhibit a new crushing machine of his own invention, which is not yet quite completed, but which will be in place at the Pavilion in a few days.

Blake's Stone Breaker, a machine whose capacity and effectiveness is well known in the Atlantic States and Europe, and which is now being extensively introduced into California, is exhibited by Mr. W. P. Blake. It is designed to prepare the quartz for stamping. Mill men will do well to examine this machine.

Mr. Fauchery is putting up for exhibition a new crusher or grinder, and an amalgamator, which will be in operation in a few days. We shall probably have occasion to refer to this machine, as well as others, more at length in future numbers of the Press.

A Rotary Cylinder Grinder and Amalgamator, prospecting size, and known as the "Novelty," is exhibited by Mr. H. L. Hopkins. It is accompanied by a two stamp battery. The whole was constructed at the Miners' Foundry.

J. and W. C. Salmon, from Reeso River, exhibit a new amalgamator, designed for the double purpose of separating gold from its sands, and butter from cream. It works upon the screw principal and hence has very properly been called the Propeller Amalgamator.

Mr. Farrand has on exhibition one of his largest size Oscillating Amalgamators, together with a miniature model of the same. This is one of the most showy amalgamating machines in the pavilion.

[Wednesday, September 7th.]

WOOL MANUFACTURES.

In compliance with the promiss we gave in in the first number of the Daily Fair Press, to give a general description of the most prominent objects at the Fourth Fair of the San Francisco, Mechanics' Institute, we commence the task, and as in that promise we divided these objects under general heads, the first of which, as a natural sequence being "raw materials, we shall commence with those articles. The nature of our home manufactures and the character of the Fair, it being pre-eminently a Mechanics' Fair, limits this department of our subject to but one article, though that a most important one—wool. The materials of which the mechanic fashions his thoughts into form comes not within our powers of description, while those used by the manufacture of salt, sugar, glass, rosin and turpentine, varnish, tobacco, wines, spirits, paper, brushes, matches and perfumery, all of which are well represented at the Fair, come more within the department of natural productions or manufactures. The display of the samples of the one subject before us at the Fair, exhibited by Clark & Perkins, is the most perfect, extensive and interesting it has ever been our pleasure to examine, including every description of the article, from the unprepared coarse, knotty flock, the produce of the poor lean sheep that wanders over the dry stony hills of the more southern portions of the State, to the rich, long, silky locks from the valuable breeds of imported sheep, introduced into the State within the past few years. Among the great features of this most interesting and suggestive collection, is the fleece clipped from the back of an imported Merino ram, contained in a glass case, probably the finest and heaviest fleece ever clipped from a sheep in the world, which weighs 42½ pounds, is nearly six inches thick, and contains wool enough to make at least three pair of good blankets, more than is in twenty pairs of some of those furnished by contractors to our brave and suffering soldiers. As the magnificent display of cloths of all colors and kinds, manufactured by the Mission Woolen Mills from their California wools, come within the department of manufacture, we shall not further mention them here than by stating that they occupy an entire wing of the central division of the main pavilion. Some bales of wool exhibited as specimens of a superior method of packing, are also worthy of mention in this connection, as the importance of the wool growing interests is such that the business of packing it for exportation has become only second to that of its production. For it may not be generally known that ill packed, greasy wools are liable to spontaneous combustion when stowed away in the hold of a ship—but a few cases of such a disaster are recorded of vessels carrying wool from Australia, and as the voyage from this State to New York or Boston is much longer than from Australia, the importance of proper packing becomes proportionally enhanced. The specimens of packing on exhibition, both in bales and open bundles, are most excellent. Wool shipped, so packed, will realize more than the additional cost between such packing and the ordinary slovenly, wasteful method, besides giving us a better character for California wool in the European markets than it at present enjoys, though a large proportion of that raised here finds its way to the factories of England and Germany.

As the question of wool *vs.* hair, on the "human form divine" has become a vexed question among those who view the negro as a man and those who view him as a chattel—a mere beast of burden—and certain scientific authorities pretend to be able to detect the beast trace of the negro by the examination of persons suspected of being tainted with the blood of Ethiopians, Nubians or Africa's sooty sons; it will be interesting to many to know that according to the observations and experiments of the best microscopists in the world, the most kinkey locks on the honest type of humanity bears no affinity to the longest, silkiest locks of any other class of animals. This is incontestibly demonstrated by the property of "felting" characteristic of wool, but wholy absent in all human hairs.

The limits of our paper will not permit us to exhaust the subject of wool in a single article, we shall therefore refer to it again, and will endeavor to furnish some figures showing the quantity raised, exported or manufactured in the State and other facts connected with its cultivation and preparation.

[Thursday, September 8th.

Notwithstanding the unfavorable condition of the weather, yesterday, the attendance at the Pavilion was fully kept up. The receipts for the day were $1,821. The entire receipts up to date, have been $12,857. At the big cheese and silver brick exhibition, the receipts last night for the Sanitary Fund, were $101. We continue our report as follows:

COAL OIL PRODUCTIONS, ETC.

In the center avenue, and numbered 336, are some novelties of interest to our manufacturing industry, accompanied by an instrument for testing coal oils, which obtained the premium offered by the American Institute, New York. Specimens are shown illustrating new processes invented by Mr. J. H. Churchill, of 308 Front street, in this city. Bitumen is presented in the form of a crude coal oil, obtained from the petroleum sands of Santa Cruz, and other localities. The clearness of the sand is full evidence of the completeness with which this has been effected. Stearine acid, the material of adamantine candles, is represented by crystals of alabaster whiteness. We are informed that they were obtained in the development of the manufacturing process which produces no nuisance, and affords a very large yield. We presume, therefore, we shall very shortly see the notice "Patent applied for" changed to "Patented, 1864."

In this connection we would mention the exhibition of Messrs Clark & Perkins, (corner of Clay and Front streets.) who exhibits at a stand under the right of the dome, a case of very beautiful productions of Portland kerosene, paraffine and Albert spirits. They claim especial merit for the first from the fact that it will stand a temperature of 140 degrees Fahrenheit, without inflaming. We are expressing the opinion of a gentleman who has been much engaged in the determination of the value of coal oils, when we say that the real desideratum being to obtain an oil suitable for safe storage, 120 degrees Farenheit is the maximum required, in situations only exposed to natural temperatures. A higher point, as 140° instead of 120°, produces extravagance from two causes; a smaller quantity of oil can be sent to market, and the oil is very likely to give trouble with ordinary lamps.

The Buena Vista Petroleum Oil Company, Mariposa county, exhibit samples of their manufacture, refined by E. Benoist, chemist.

W. G. Jones, of Drytown, Butte county, exhibit some fine specimens of California rosin and turpentine. San Francisco agents, 416 California street.

Ward & Co., of Portland, Oregon, exhibit pitch and light varnish.

FURNACE PRODUCTS.

In the center avenue Mr. James T. McDougal exhibits five bars of copper, obtained in one hour's time from carbonates and oxides by the use of a new flux, known as a hydrated silicate of alumina. Mr. McDougal is the discoverer of the properties of this flux, and for which he claims a special superiority. A furnace is now in process of construction at North Point, to use this flux on a larger scale for smelting purposes. Mr. McDougal also exhibits wire and rods drawn from the copper which he has thus produced; also smoothly polished and hammered copper—all from the metal just as it came from the furnace at one operation, thus proving its fitness for immediate use, without being subjected to any refining process. One of the bars is partially broken to show the natural grain of the metal as it comes from the furnace.

By the side of the above, Mrs. Hall exhibits two bars of copper and one of argentiferous galena, extracted from their respective ores by the use of the volcanic smelting furnace of her invention, the particulars of the extraction of which are given as follows on the respective labels attached. One of the bars of copper, weighing about sixteen pounds, was run out in twenty minutes; one bushel and a half of charcoal being put in the furnace to one bushel of ore. Some of the ore from which it was taken is exhibited by the side of the bar. Another smaller bar was taken from the same in twenty-one minutes, by the use of the same proportion of fuel. The bar of galena, which is said to contain a large percentage of silver, together with a small value in gold, was taken from its ore, under the direction of Miss Hall, the daughter of the lady inventor. This metal is alleged to have been taken from its ore in twenty minutes. The fuel used was charcoal in the proportion of one bushel of coal to a bushel of the ore.

CALIFORNIA MANUFACTURES.

While, as we stated yesterday, the list of raw materials on exhibition at the Fourth Fair of the San Francisco Mechanics' Institute, is confined exclusively to the one article of wool, if we except rosin, from which Hucks & Lambert's axle grease, a world-wide famous California production, is made. The list of manufactures carried on in this State, principally in this county, includes the whole range of those required by a wealthy, numerous, highly civilized commercial people, such as Californians are admitted to be. The mere mention of each of these manufactures would be quite uninteresting—to describe them in detail, impossible; so that we shall mention each in a brief notice.

There is a very fine collection of home invented and manufactured machinery, adapted for steam, water, caloric, electricity, horse and man power, from the costly, complicated quartz crushing and amalgamating machine, to the ingenious contrivance invented by some clever mechanic to save labor in his particular employment, or to carry out the idea of some mechanical mind. Some of these inventions are mere novel applications of well known principles, while others are original in both conception and application.

In the article of machines for pumping, there is a fine collection at the Fair, as might have been expected, considering that Hansbrow, one of the most energetic and skillful of our mechanics, who carried off the prize in this speciality at the World's Fair, in England, in 1862, is out with new inventions and improvements on his old ones. Mr. Hansbrow, in addition to the pump above alluded to, also exhibits a very large and beautifully finished hydrostatic engine, a machine of decided merit, to which we shall more fully refer under the head of machinery.

Next in importance in the way of manufactures is that of worsted goods—a branch of local industry of great importance—as may well be conceived by an examination of the magnificent display of these goods on exhibition from the Pioneer and Mission Woolen Mills, which includes flannels, blankets, broadcloths, tweedes, plaids, carpets, as well as every other description of manufactures known to the markets of England, France and Germany. This part of the Fair is most complete, as the proprietors of these establishments have a large collection of all their manufactures in the piece, and made into clothing for ladies gentlemen and children. Then there are full sets of specimens of the products of the manufactures of salt, gunpowder, gold-leaf, ironware, cordage, paper, kerosene, tobacco, snuff, cutlery, guns and pistols, carriages and matches. This latter, though a comparatively new branch of manufacture among us, must ultimately become one of considerable importance, as several of our native California woods, from their lightness and peculiarity of grain, are well adapted to the making of these matches; while the sulpher used in their manufacture can be obtained in unlimited abundance and exceedingly pure, in many parts of the State for the mere collection. Then there are specimens of home made borax, perfumes extracted from our indigenous plants and flowers; and from the distillation of coal, including paraffine, alchohol, naptha and ether. We have also California manufactured pitch, rosin and turpentine, brooms, furniture, musical instruments, sugar, syrups, wines and spirits.

It must not be inferred by those who read this very much abreviated list of the manufactures exhibiting at the Fair, that they are mere experimental operations. Every one of them is conducted on an extensive scale. Millions

of dollars being invested in their prosecution, and thousands of men and women find remunerative employment in carrying them on. In our opinion the crowning glory of the Fair, is the gratifying exhibition of the growing importance of the manufacturing interests of the State, which gives every reason to hope that ere many years California will be almost independent of foreign manufactures to supply the wants of her people.

Hydraulics are a speciality with California. The necessities of our great mining enterprises have taxed the inventive genius of our mechanics, in this direction, to their utmost capacity. They have proved, however, fully equal to the task, and California, alone, has done more, in the last ten years, to advance the science of hydraulics and hydrostatics than all the world beside, in half a dozen decades.

Our first efforts were devoted to contrivances for saving the labor of the pick and the shovel by confining and directing streams of water in such a manner as to enable one man to do the work of fifty. Much attention has also been paid to improvements in pumps and various kinds of hydraulic wheels, but the climax of invention in this line has been reached by Mr. Hansbrow & Redding of Sacramento, in the beautiful and apparently perfect hydrostatic engine which they have now on exhibition at the Pavilion, and which is one of the chief mechanical attractions at the Fair. These gentlemen have spent some two years in bringing this invention to its present degree of perfection. Its movements are precisely like those of a steam engine, working with a cylinder, piston, valves, etc.

The great trouble in working out the problem of this machine has been to overcome the non-elasticity of the water. Those who have heretofore essayed to accomplish this have uniformly failed, or accomplished it in so imperfect a manner that the inventions have been useless for all practical purposes. Messrs. Hansbrow & Redding have completely overcome this difficulty, by an ingenious arrangement of air cushions, which render the water at every point, quite as elastic as steam, and the motion of their engine, consequently as easy and regular as the best constructed steam engine. The engine can easily be worked up to three hundred revolutions per minute. Their present machine will give 12-horse power, with 20 inches of water—miners' measure.

In addition to the hydrostatic engine, these gentlemen exhibit their famous Challenge Force Pump, also a California invention, and one which took the Grand Prize Medal at the World's Fair in London, in 1862. This was the only prize awarded to pumps at that exhibition, although no less than 308 competitors appeared on that occasion.

Capt. Harrison, the well known Mare Island Pilot, exhibits two of his eccentric wrecking pumps. This is another important California Invention. He also exhibits one of Andrews' Centrifugal pumps, invented and manufactured in New York, and arranged to be driven by a double oscillating steam engine.

Mr. S. F. Blasdell exhibits three of Stannards' Rotary Pumps, of 5, 5½ and 12 inch calibre. Mr. B. also exhibits Roper's hot air engine by which the machine is driven and upon which our DAILY FAIR PRESS is printed. We shall notice this engine more at length at another time.

Mr. David Stoddart exhibits a steam mining pump, California made, compact and of great power. It is designed to be placed in the bottom of a mine, and force the water to the surface. One of these pumps is now at the Union Mine, Mount Diablo. The one now on exhibition is also sold to a mining company to be delivered immediately after the close of the present exhibition. The speciality of these pumps is to force water to a high elevation. Mr. Stoddart also exhibits several of Gifford's Water Injectors, for forcing water into steam boilers. One of these injectors may be seen in operation upon the boiler which furnishes steam for the large engine which drives the machinery in the Pavilion.

(Friday, September 9th.)

The attendence at the Pavilion yesterday, was greater than on any previous day. Not less than 5,500 people visited the Fair last evening. The total receipts for the day were $2,060, of which amount $1,400 was taken in the evening. The great cheese in the pagoda was formally presented to the Sanitary Commission last evening, by Mr. Steele, of Steele & Bro., the donors. The response was made by Dr. Bellows. The ceremonies took place in the presence of about 4,000 people. The receipts at the pagoda up to this time, have exceeded $500.

The machinery is now pretty much all in running order. The large steam engine exhibited by Goddard & Co., works admirably. A little two stamp prospecting mill was pounding away, quite merrily, yesterday, day and evening, and the large five stamp battery will probably be running to-day. It will be driven by Hansbrow & Redding's hydrostatic engine. Large numbers of new entries are constantly coming in. About 100 have been received during the last two days, and quite a large number additional, will probably come in to day from the Christian Commission Fair, which closed last evening. The fine skating pond from that exhibition will be in operation in a day or two in a room now being fitted up especially for it at the Pavilion.

FRUITS AND FLOWERS.

One of the most beautiful, interesting and suggestive features of the Fair, is the exhibition of the collection of trees, shrubs, flowers and fruits, of which there are large numbers from the California and St. Ann's nurseries, and the orchards of Mr. Nickerson of Lincoln, Placer county, W. O'Donnell, of San José, and many others. The collection of plants from the garden of Mr. O'Hara includes seventy-six varieties of evergreen shrubs, principally exotics, from all parts of the world, but all grown in the open air in the genial clime of California. Among these plants are the beautiful Norfolk Island pine, gum, wattle and other ornamental shrubs from Australia, the famous emblematical holly of Old England, the elegant golden laurel from the West Indian Islands, fucias, geraniums, of tree like proportions and with blossoms of every tint and hue, the fan palm from Africa's scorching clime, and many curious, elegant or perfume bearing plants from China, Japan, Australia, India and Europe, among which are fifty-varieties of dahlia, 100 of verbenas. Some of the boquets on exhibition by these contributors contain specimens of more than one hundred different kinds of flowers, the perfume of which is truly delicious.

Mr. Lanzenare of the St. Ann's gardens is equally extensive and rich in variety as that of Mr. O'Harra. These two gentlemen, assisted by Mr. O'Donnell, furnish the beautiful collection of evergreens and flowers with which the central pyramid is decorated, and which forms such a beautiful feature of the Fair.

The collection of fruits on exhibition is without doubt the largest, most beautiful and varied ever exhibited at any Fair in the world, of fruits grown in the open air. There is no country in the world except our own famed California, where the orange and date of the tropics would flourish side by side with the hardy fruits of the frigid North. There are no less than 250 varieties of apples, 200 of pears, 50 of peaches, 150 grapes, 25 plums, 10 figs, 10 quinces, besides walnuts, peanuts, almonds, oranges, lemons, limes, pomegranates and many others—and such fruits. Not your puny, sickly little apologies for the names they bear, but apples and pears that weigh more than a pound each, peaches equally large, and grapes in clusters feet in length, and of a flavor that would make old Bacchus vintner stare, and Jove's manufacturer of nectar go into ecstasies. With such fruit can it be wondered at that the manufacture of wine is becoming one of the leading interests of the State.

MACHINERY AT THE FAIR.

In addition to the other machinery exhibited by Mr. Stoddart, as noticed yesterday, he also exhibited a very superior Blacksmith's Hand Drill, manufactured in this city; also a very effective boiler iron punch, of light construction, but great proportionate power.

McCauly & Wheeler exhibit a hydraulic pressure Water Wheel, a new invention, for which they have taken the necessary steps to secure a patent. The one on exhibition can be run so as to give off 100 horse power by employing only 20 inches of water, miners' measure, with 460 feet head. Of course any intermediate power can be obtained by a less head. Any one curious or interested in such matters will do well to obtain a circular from the exhibitors, showing the revolutions per minute with different heads and quantities of water. The wheel is made of five different sizes.

Mr. B. Faehery also exhibits a neatly constructed, miniature hydraulic Water Wheel, designed for a high head and a small quantity of water. It will be driven during the exhibition by a force pump capable of applying a pressure equal to 400 feet head. This is a California invention—"Patent applied for."

A. Tyler also exhibits a Water Wheel, manufactured at the Golden State Iron Works.

Mr. Elliott, engineer of the Bensley Water Works, exhibits a "rotary, water and steam Engine Pump and Water Meter."

Messrs. Johnson & Reay, exhibit a very superior copper Hand Pump.

Mr. A. J. Smith, of 33 Webb street, exhibits a most excellent hand pump, known as "Hudson's Improved Pump." This pump is manufactured in this city, by the exhibitor. It will be found properly labelled, and in that portion of the Pavilion set apart for machinery.

A HINT.—As any one will observe on examining the many new inventions and machines on exhibition at the Mechanics' Fair, most of those possessing any merit are marked "patent applied for." Mechanics and inventors should take this hint, and when they contrive or conceive any design for any machine or instrument calculated to be of any use or importance, apply for a patent, and thus secure to themselves all the benefits of their own thoughts and labor. The office of the MINING AND SCIENTIFIC PRESS, possesses superior facilities for securing patent rights—a word to the wise is said to be sufficient.

There Was Nothing in It.

The proprietors of the MINING AND SCIENTIFIC PRESS, with a view of honoring the "art preservative of all arts" represented at the Fair, at considerable cost and much trouble, have had a printing press and type set up in the fair building with which they publish the DAILY FAIR PRESS, containing eight pages and 32 columns of interesting reading matter connected with the fair, which they gratuitously distribute to the visitors—an amount of liberality every reasoning being will fully appreciate, but it appears there are some beings who do not—such an one exhibited himself yesterday. He was what appeared to be a man dressed in the extreme of dandyism, gloved, perfumed and jewelled in the highest style of the art, in company with whom was a very intelligent and quite a charming looking young lady, who as she passed through the crowd, always collected round the "PRESS" to see its mysterious operation, desired to obtain a copy of the FAIR PRESS to read its contents—every sensible lady appears to be anxious to do so. But her foppish companion giving his insignificant little nose an altogether unnecessary additional turn upwards, exclaimed in those peculiar accents the types will not convey. "Ah, No! my de-ah—dont take it, there is nothing in it;" a charge that with much more truth might have been applied to the speaker's head. The PRESS, though not a newspaper, was the first to publish an account of the disaster to the Washoe, and always contains useful and interesting reading.

FACTS AND FIGURES.—The following are a few facts and figures connected with the costs of the Pavilion of the Mechanics' Fair: In its construction, 339,000 feet of lumber has been used. Its total cost so far, has been about $18,000.

WIDE WEST MINING CO.—This company, after a year's work on their deep shaft, have found a large, well defined ledge of *pay* ore and have commenced drifting on it, preparatory to taking out rock for their mill. The Superintendent while re-assorting the rock in the upper chamber, recently discovered the old original ledge, which had been covered up, either by accident or design, and was supposed to have "run out." The superintendent thinks he has now uncovered and in sight enough of this pay rock to keep the mill running for one year. He also states that on the 30th of August, while the laborers were removing some timbers of the mine, a large cave or slide occurred disclosing a new vein of ore, six feet in width, which he thinks will yield over $60 per ton. The superintendent writes that the mill has just cleaned up from a crushing, and finds the yield to be $25 per ton. The rock now coming from the deep shaft is better than that obtained from any other point.

If the above is all true, the Wide West must soon become a good dividend paying mine.

REVOLUTIONARY RELICS.—Among the objects of interest at the Mechanics' Fair is a fragment of Plymouth rock, on which the Pilgrim Fathers landed in 1620. A silent but most expressive memento of an event, that by founding a state of society in which intellect, virtue and skill are the only insignia of nobility, has revolutionized the world of science, arts and manufactures, and given such a dignity to LABOR, that the highest intellects in the land are to be found among its followers, as is evidenced by the objects on exhibition at the present Fair. This fragment, the property of E. I. Barra, is the only piece of the rock on this Coast, though there are thousands of the descendants of the Pilgrims among us.

Another interesting relic is a wine glass which was on board the vessel from which the bold defiers of royalty threw the tea in Boston Harbor, in 1774. This relic, preserved with so much care by the descendants of one of the persons engaged in that memorable exploit, is the property of Mrs. Barnes, of this city.

NEW ANTIDOTE.—A few years ago M. Herran, French Consul General at Salvador, discovered a sort of bean, the *Smoke cedron*, which is a specific against the bite of venomous reptiles. While on an important mission across the mountains, one of the Indians of his suit was stung by an *equis*, one of the most dangerous of the snake tribe. Another Indian, however, at once administered a powder, which the patient swallowed, and a perfect cure ensued. M. Herran immediately purchased the secret, which was simply the above-mentioned bean reduced to powder. A quantity of this bean is now on its way to France But for venom of a less deadly nature, such as the sting of the bee or wasp, phenic acid is an excellent antidote. This acid is obtained by the decomposition of spyroilic acid, salicine, and coal by heat. It is solid, colorless, and crystalizable; it melts at 35 degrees Centigrade, boils at 188 degrees, and has a peculiar odor and a pungent taste. It is scarcely soluble in water, but very much so in ether and alcohol. This acid applied to the place will stop the inflammation and take away all pain.—*Galignani.*

GROUNDLESS FEAR.—The deplorable calamity that (befell) the steamer "Washoe," and which has created so much sorrow in this community, appears to have caused everything in the shape of a Steam Engine to be an object of terror to some people. We were highly amused at an occurrence in the Fair Building on Wednesday last, during the time when it was raining. The first few heavy drops that fell rattling against the roof of the building, caused a peculiar sound, which the lady could not understand, and the accident being probably uppermost in her mind, the idea of a bursting boiler presented itself, and she became so much frightened that she picked up her little girl, and rushed for the door, apprehensive that the building would fall and crush them, a most groundless fear, for though extremely high and airy to appearances, the dome of the Fair Building is most strongly and substantially constructed.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

HOME FINANCES.

We note no new feature in the money market. A fair demand prevails at Bank and in the open market, and there is no lack of good commercial paper offering for discount, most of which is taken at former rates—1½ ₱ cent. per month. Loans upon first class city property can be effected at 1¼ ₱ cent. per month, where the parties are well and favorably known to the lender. In making loans of this character, many of which do not mature short of 12 months and some have two years to run, a lurking apprehension still exists on the part of capitalists, that certain contingencies might in the future arise, whereby payment could be made in a depreciated currency notwithstanding the Supreme Court of this State has decided against such a proceeding, if an express contract is made to pay in gold. A higher tribunal it is said, by some, will be called upon a few months hence, to pass upon the Constitutionality of our Specific Contract act and this Court may take a different view of the validity of our State Laws which in a measure abrogate those of the Federal Government. It is quite apparent that many persons entertain slight fears of a decision of the United States Supreme Court, adverse to that of our Supreme Court; but it is well perhaps to avoid speculating at this juncture, upon such an untoward event.

Loans upon Mining Stock Collaterals for short periods and with wide margins from current market value, continue to be made at from 1½ to 3 ₱ cent. per month. The agents of the Bank of British North America, in this city, are now prepared to transact a general banking business and are offered by the home institution ample capital and other facilities for this purpose.

The Eastern Exchange Market has not opened yet, for Monday's steamer. Currency Bills on the Atlantic, are likely to rule at about 125 ₱ cent. premium on gold; Telegraphic Transfers at 5½ and Sight Drafts, payable in coin, at 3½ ₱ cent. premium.

Legal Tender Notes have ruled throughout the week at from 40 to 45 and close at about 45½. Latest telegraphic advices quote gold in New York at 233.

A BIRD'S EYE VIEW OF BUSINESS.

Taken as a whole, the week presents few items of general interest. Business has been light. Importers continue to complain of constant dullness, while at the same time Imports are augmenting and stocks rapidly accumulating in Bonded Warehouse's. Foreign Importing merchants appear to complain more than those who are engaged in bringing goods from domestic Atlantic ports. It is true that many goods even from New York and Boston are slow of sale and almost a drug upon the market, and yet the assortment is so great and varied that it would be strange if they did not dispose of large amounts in the aggregate.

Jobbers of groceries and hardware are very busily engaged executing interior orders for goods. While dry goods dealers, boot and shoe men and druggists generally complain of unusual depression, demand light and prices of their goods but feebly sustained. Another point tending to this pressure is the fact that the auction rooms have been sorely taxed with the weight of dry goods, clothing, boots and shoes daily offered and sold under the hammer at low prices. In leading grocery staples, Sugar, Rice and Tea have been liberally dealt in and prices of raw Sugar have slightly advanced—refined have declined. Rice has jumped up in value, and Teas have been largely dealt in, as compared with the transactions of the past few months.

No special excitement or speculation exists at present to any extent, in any prominent articles of merchandise. Provisions (smoked,) have been more freely purchased of late. Butter is lower, lard is neglected, hams and bacon have sold largely while pork appears to be in light demand. There is but a moderate inquiry for breadstuff at the high prices ruling, still there is an occasional cargo of wheat and flour sent off, while there are strong indications that ere long we shall be in receipt of both from Chili—possibly from New York, and certainly supplies from Oregon, some of which have already reached us. A cargo of barley is now enroute for this port from Chili, and there is no doubt more will come after January next

We quote flour $9@9.50 for superfine, $10@$10.50 for extra; wheat, $3@$3.50; barley, $3@3.35 for new and old; oats, $2.50 @2.75; corn, $3 25@$3 50; beans, 3c; potatoes, 4c; bran, $40@$42; straw, $10@12; Butter, Eastern, 30@32½c; California roll 55@60; lard 15@17c.

YESTERDAY AT THE FAIR.

New attractions are constantly being added to the exhibition at the Pavilion. Yesterday considerable additional machinery was put in motion. Hendy's Improved Circular and Gang Saw Mill atracted much attention last evening; also, Haliedie's wire rope machine. Hausbrow's & Redding's Hydrostatic Engine was subjected to a load for the first time last evening. The five stamp battery, which has been for some time in preparation, was belted on to this engine last night. The machine took the load right along as smoothly as any steam engine could have done, and pounded away until the foundation of the battery gave way under the weight of its enormous blows. Much curiosity is manifested in an improved rotary quartz mill now being put together in the corner near the the fly-wheel of the steam engine. We shall describe this machine in a few days. An elegant wire booth or summer house was yesterday placed over the beautiful aequarium near the center of the Pavilion, and very justly attracts much attention. The skating pond will soon be ready for exhibition. A great number of minor articles of interest and value have been added to the exhibition since yesterday's issue.

The Pavilion has already become quite a fashionable place of resort and promenade in the evening. The pleasantest time to visit it, however, is in the day time, when there is no crowd—especially for those who desire to examine and study carefully the articles on exhibition. At that time, there is just about company enough to make the exhibition pleasant and interesting. An additional attraction will be added this afternoon. The Band which has heretofore discoursed its sweet music evenings, only, will be present this afternoon, on and after 2 o'clock. The receipts at the door yesterday were $2,200, making a grand total for the past week of $16,560. The receipts for the Sanitary Cheese were $105. Sale of fruit for Sanitary Fund, $5 50. Mr. Stevens, of Fruitvale, has sent a magnificent box of fruit for sale to-night.

An article on the Art Department has been unavoidably postponed until Monday; also several other matters to which we intended alluding to-day.

PROFESSOR SILLIMAN, accompanied by the well known banker, John Parrott, Esq., and several gentlemen from New York, left this city yesterday evening on a tour of inspection to the Humboldt and Reese River mines. The party expects to be absent about one month.

Alphabetical List

OF THE

NAMES OF EXHIBITORS AND ARTICLES

AT THE

Mechanics' Fair.

[The list will be made complete in our next issue.]

Anaheim, U—Three and one-half dozen California wine, and one half dozen california brandy.

Legay & Co., a case of hats.
Lovegrove, Geo. H., a what not and two picture frames.
Lawrence, A, a show case containing bead work
Lavingstoo, Mrs., Redwood—1 frame leather work.
Linden, Harry—One sheaf of Neopold barley, grown by J. Beetie, near Oakland.
Lincoln, Mrs. N.—An ancient deed of sale, framed.
Lawrence & Houseworth, four stereoscopes, two California views, and two foreign views.
Lonquin, E F, a case of stuffed birds and two cases of insects.
Loomis, Pascal, a frame containing specimens of wax engraving.
Lask, Van L, a dozen California broom.
Longshore, J, one trunk and valise, (for competition); six valises; two Saratoga trunks; two sole-leather ditto, one folio trunk; one packing ditto; one concealed double trunk; one common valise.
Lamb, F B, one sheep shearer, one coffee roaster, and one washboard.
Lorquin, E. F., a stuffed eagle.
Lull, G W., a frame containing an agricultural wreath.
Lull, Mrs G W, an agricultural wreath, framed.
Leaphart, Francis, three boxes of chemical olive soap.
Levy, Mrs., two vases of feather flowers.
Lekins, Miss M, a show case containing gilding on wood.
Love, Mrs. H. S., a needle-worked capo, a handkerchief case, and a sampler.
Lang, Mrs., a case of babies' caps.

Miller, H.—Three double driving belts; two pieces of water hose.
Morrell, Charles—Two banjos.
Marwedel & Otto—A foot lathe, of California invention; one door with patent bell hinges.
Martin & Folger, samples of spices, coffee, etc.
Moses, Ellis & Co., one hale double crown paper, six reams do., six reams single do.; twenty bundles straw, board, etc., from San Lorenzo Paper Mill, Santa Cruz.
Mayer & Son, C. T., a lot of furs
Mezzara, P., three busts, one statuette, one medallion, one case cameos.
Mangoriul, D., five statuettes, four medallions, one bust.
McDougall, Mrs. A. C.. two shell frames.
McKoon, A., a wire and straw bee-hive.
Monneck & Co., samples of wood and paper boxes.
Mallon & Co.. John, twenty-one pieces of cut glass, framed and unframed.
Mojica, D., a specimen frame, veneering in rosewood.
M. Carpena, of Union College three water color drawings, one crayon sketch.
Mulney, Mrs. R. A., (87 years of age,) three pieces of needle-work.
Manchester, B., a shell frame.
Milrose, Zorn & Co.—Two cast iron burial caskets, two umbrella stands, one steel guage, one steam counter, three patent measurers, and one box India rubber samples.
Morton, G. M.—The model of an amalgamator.
Medina, F. P.—Seven frames of chenille and worsted work.
McDougall, J. T.—Five bars of copper and a bag of copper ore.
Morton, W. H.—An improved weather vane.
Maxwell, Mrs—A paper of box quilts and knitted work.
Mead & Son—3 rockinghorses.
Maxwell, Mrs.—One case of crochet work
Moody, T. B., a lot of copper ore, Nacasari District, Sonora, Mexico.
Miller, H., two rolls of kip leather, one of calf, in imitation of French manufacture.
Moffat, W. P., a portrait of Burns, by Nasmyth.
McFarlane & Flinn, a couple of horses' hoofs, showing the superiority of their shoeing.
Miller, J. M., a patent bee-hive.
McCourtency, J F, three crayon pictures and one photograph.
Matthiew, Mrs, thirteen pictures in water colors.
Morgan, Elinore, a portrait of Christ in worsted-work,
Morgan, C, a water color picture of flowers.
Mandeville, E, a 40-inch extra bellows.
Marion, S, two models of ships.
McLennan & Grivar, six bales of wool.
Miller, A., one lot furs, capes, robes, skins, muffles, etc.
McGucken, Miss Rose, one quilt made by a girl ten years old.
McAuliff, F. T., two samples of polishing in imitation of rosewood.
Meyer, I. G. H., a case of billiard balls, ivory work and walking canes.
McDonald, Mrs., a vase of wax fruit, a case of hose made of dog hair.
Mission Woollen Mills, four cases of woollen goods.
McKinley, Mrs., two velvet ottoman covers.
Mason's Brewery, a hogshead of XXX stock ale, one ditto of XXX porter; one barrel of porter, three years old, and one ditto of cream ale.
May, Miss Ida, a sofa cushion.
Mission Woollen Mills, four boxes blankets.
Marsh, Mrs., needle-work, Japtha's Daughter.
Montlezun, A., case of preserved eggs, three years old.
Mendoza, A., gold buckle and ribbon.
Meyers, Robert, a case of California stuffed birds; two paper mache portfolios, three do. do. tables, a glass shade and groups of figures; a weather house.
McPherson, Mrs., a sample of woman's walking dress, latest fashion.

Miller, G an improved feathering paddle.

Norcross, Mrs. H. M., a glimping machine.
Nahl & Bro, a lot of photographs, paintings in water colors, and India ink drawings.
Nevins, Mrs. T. J., a child's bonnet, made of pine leaves.
Norcross, Mrs H., a case of fringes, cords, tassels and buttons, of own manufacture.
Norcross, B., large standing show case of Masonic and Odd-Fellows' regalia, flags, etc., of San Francisco manufacture, and a case of military goods.
National Guard, two pictures, "War Roll" and "Flag Presentation."
Newman Bros., a case of California-made brushes and a butter-line brush.
Neagle, S. F., harness cask (for ship use,) and one choese press hoop (encircling the mammoth cheese.)
Northey, Mrs. H. H.—A quilt.
Nagle, G., a photograph.
Nutz, F, a banner painted on silk.
Neall, Mrs James, one plate of fruit.
Netting, H W, four specimens of artificial flowers and two of needle-work.
New York Brewery, (Hunneberg & Co.,) two kegs prime lager beer.
Newman, C., a patent kerosene lamp.
Newman, C., a dozen patent sealing fruit jars; one dozen and a half specimens preserved fruit; one patent box for collecting fares.
Nestor, John, Brown's papent metallic weather slips.
Neil, Mrs. James S., California leaves in the anatomy.
Nile & Kollmeyer, seven oil paintings.

Osgood & Stetson—A lot of tinware.
Occidental Hotel, a case of minerals.
Overmayer & Rappold, a show case containing boots and shoes.
Occidental Hotel Laundry—One case specimens of laundry work.
O'Hare, J., a lot of evergreens, green house plants, dahlias, verbenas and boquets.,
O'Cooner, J P, a fruit piece.
Otto, F, seven pieces of wooden mouldings, a book on moulding.
O'Brien, M., a butcher's cart.
O'Hare, S., a plate of large sized apples.
O'Donnell, W., twenty-eight varieties of apples, twenty-eight do, of pears, two bottles white wine, two do. red, two do. peach brandy, one pear do., and one of apple do.

Prime, S—The model of a ship.
Page, N.—Eight pieces of redwood.
Perkins, D. L. 101 bottles California seeds, five varieties corn in ear, and a squash in good preservation, of 1861.
Patterson, John, twelve medallions and two busts.
Plate, A. J., a show case of guns, pistols, etc.
Pendegast, J., a hot and cold shower bath.
Patterson, J. D., two spanish merino fleeces, and one card sample of wool.
Perez, Antonio, four shell frames; one shell basket; one shell what-not; one pair white shells.
Peet & Son—Two Mexican saddles.
Pollock, James—A chess table.
Pfeiffer, E. I.—f poncil drawing.
Popper, Miss—1 buggy robe.
Paine, C. A., Petaluma—1 bailing press.
Parker, Mrs. M. H.—Two cushions, crape and chenille.
Paulinson, Henry, San Francisco—4 fresco paintings.
Price, J., Petaluma—Hay press.
Peck, G. H., and G. Vernard, samples of a steam boiler cleaner, an antidote for scales and incrustation.
Pearson, Miss, a specimen of penmanship.
Pacton, Wm., an architectural drawing.
Parker, Mrs M., a knit quilt.
Parker, J W, a drawing of the Gould & Curry Mill engine.
Paine, H J, a case of dentistry work.
Prevost, L., a lot of California silk on paper, one lot on reel, one lot of cocoons, one lot of silk worms.
Pollard & Moore, a covered rockaway
Porter G K, five cases boots and shoes.
Prater, E. B., a concentrator.
Plummer & Co, five bags of salt; four smaller sacks; samples of the same.
Paltengal & Larsennienr, nine specimens statuary.
Price, M., a case of cutlery.
Pfaff, Geo., three flutes and two clarionets.
Plummer, C A, two pencil drawings.
Pittsinger, Miss Eliza A, a frame of shell work, made by Mrs W N Slocum, of Santa Cruz.
Pratt & Co., a churn.
Page, W., nineteen pieces of sugar pine lumber.

Quick, J W, a couple of perforated quartz mills, a flouring mill and smut screens.
Queen, Mrs—A crochet bed-quilt.

Reid, H.—Eight silver specimens from the Cordilleria mine Mexico, and three ingots of silver and copper from the same mine.
Rice, Z., one case containing lock, keys, stencil plates, etc.
Roos & Wunderlich, one case of artists' materials.
Robinson & Snow, fourteen engravings and chromo-lithographs, in frames
Read, Miss, an apron.
Ransom, L., three pencil drawings.
Rudolph, W.—One gun, in case.
Reed, John—A Whitehall boat.
Ryder Mrs. J. T.—A frame of woollen work.
Ramsdell, P. H.—Two specimens of coal from the Black Diamond Mine at Mount Diablo.
Rice, C. R.—One parcel manufactured horse-shoes and shoeing hammer.
Rosenblat, Mr—A show case containing laces and fancy goods
Regues, Mrs., a piano stool, pin cushion, lamp-mat, and a piece of embroidery.
Russ House Laundry, a case of laundry work.
Roberts, James, a fruit piece, in oil.
Rotazzi, Mrs Amelia, two crayon drawings.
Rosenwig, Mrs, a specimen of worsted-work in a gilt frame
Rosenthal, Toby, three views of the taking of Sebastopol.
Russell & Irwin, one show case of locks and door furniture; a fire and burglar-proof sideboard; one ditto combined, and one specie vault.
Randall, P W, a chess table of papier machio.
Reeves, T., an improved oil globe, a California invention
Ruggles, Mrs. A. H., a hair wreath in a frame.
Reynolds, L. E., twenty-five arithmetical drawings.
Roberts, M. R., nine Italian oil paintings
Roos & Wunderlich, fifteen pictures in frames.
Risdon, Mr., a self supporting pulley.
Reed, T., a model of a life-boat.
R. Liddle & Co., a show case containing guns, pistols and sporting articles.
Roullier, Henry, three pencil drawings.
Rawson, Mrs. J. A., a crochet counterpane, an opera shawl, two tidies and a couple of neck collars.
Ramsdell, B. H., a specimen of coal.
Rappenthal, J. C., a six hundred gallon wine cask.
Ricci & Co., twenty-four bottles assorted punches.
Reilley, Thos., show case of gold and silver leaf.
Root, W. D., a patent tire-upsetting machine with a puncher combined.

Stoddart, David—A steam pump of California invention; seven of Gifford's injecters; a blacksmith's drill, California invention.
Schumann, H.—A show case of pipes.
Salmon, J. W. C.—An amalgamator and a churn.
St. Louis Brewery, two kegs of lager beer.
Smith, M. C., a specimen of penmanship.
St. John, E. G., three pictures in water colors.
Swaine, J. H., a case of boots.
Sack, J. C., a case of optical and mathematical instruments.
Stewart & Co., J., samples of rosin and turpentine.
Shaw, S. W., nine oil paintings.
Simms, John, a specimen of copper ore from Fall Creek lode, Josephine county, Oregon.
Searls & Co., A., a lot of huggies.
Steele & Co.—Twenty-nine trunks, five valises, and twenty-two bags and satchels.

Swain & Co., R. A.—A lot of glassware and china.
Smith, A. J.—A brass and copper force pump.
Session, Mrs, J., two frames of sea moss, one frame of hair work, one card crochet-work.
Schiedell, C W., three tidies.
Sweet, S., a box of natural leaf tobacco, grown by Larco and Williams, Tolare county.
Souther, Mrs., two quilts.
Short, Mrs L H.—Five pencil drawings.
Sherman, B F.—A cotton quilt.
Stemberg, Mr—A pencil drawing.
Stern, Jacob—A pencil drawing.
Simons Mrs—A frame of hair work.
Sebel, Mr—A box of hair tincture and hair dye.
Saunders, Mr.—Two improved whilletrees.
Stevens, J., Redwood City—1 Monitor washing machine.
Scovill, J.—A portable clamp drill.
Steele Brothers, Pescadara, Pigeon Point, Santa Cruz county—A cheese, weighing 3,500 pounds. For the Sanitary Fund.
Sikes, Z., Santa Clara—A roller and grain drill.
Sanford & Co., T. G., a lot of men's clothing and a worked buggy robe.
Swain, Miss, two crayon sketches, one oil painting.
Simmons, S, D., an egg and cake beater, and piece of needle work.
Standard Soap Co., a number of samples of California manufactured soap.
Salamon, Miss L, one embroidered skirt and sleeves.
Snyder, Mrs. J. H., a shell whatnot, to be hung in a room corner.
Strauss, Miss L., one piece of woollen work; a rug and three tidies in bead work; a beadwork cover for stool.
Spaulding, N. W., two patent toothed circular saws.
Simmons, Mrs. Hannah, a picture of Ruth and Naomi in worsted.
Shew, Jacob, ten frames cartes de visito, and fourteen photographs.
Snyder, Mrs, three oil paintings,
Swain, Miss, an oil painting and three crayon sketches.
Schmidt, Miss Mary, nine wax-work pictures in frames.
Santerd, J L, a chenille belt or band, a flannel shirt, a handkerchief, an infant's hat, two pieces of sea foam.
Sprnig & McArron, a side spring buggy.
Simmons, Melvin, model of a pilot boat.
Schmolz, W., a large case of balance scales; surveying and and engineering instruments, etc.
Stearns, D A, a specimen of coach painting.
Stillwell & Co., B. F., a patent frame for advertising, and a card case.
Strabl & Co., Jacob, a self regulating windmill.
Shed & Wright, a half bbl. of Oregon pitch, a jar of bright varnish, from Oregon.
Scoffy, Mrs., a case of shells.
Schmidt, Mr. and Mrs., a show case containing hair work.
Stratton, A, N., a hydraulic pump and two hydraulic presses.
Sanderson, L. F., thirty-eight varieties of pears.
Sbed, C. V., two frames landscape paintings.
Sbew, W., forty-six frames photographs.

Tofft, Mr., five pictures in water colors.
Torning, A. & T., a sign specimen in script lettering.
Tarkington, E. J.—A banjo, with new style of head.
Trimble, Mrs—A quilt.
Tabor, R. L.—A specimen of drawing in India ink.
Tubbs & Co.—14 coils cordage.
Taylor, S. P., Pioneer mills, Marin Co.—14 bales wrapping paper.
Traver & Brother, San Francisco—8 Eureka wringers, N.Y.
Townsend, L R, an arebitectural drawing.
Torney, G, two specimens penmanship.
Teubner & Hoffman, three show cases.
Ten samples of powder from the California Powder Works, at Santa Cruz.
Tolle, Oscar, a piece of shell work.
Thomas, Mrs H, a bead card basket.
Tolle, Mrs. M., a show case containing fancy needlework.
Truewortby, F. M., three frames of stencil plate impressions.

Unger, A., two vases wax flowers.
Uszynski, Mrs., a frame of fancy hair work, set in gold.
Union College—One mechanical drawing and a water color drawing.
Union College, Pupils of—A couple of mechanical drawings.
Union College—5 water colors.
Union College, Pupils of—Pictures in water colors.

Van Vleck, Durbin, samples of wood engraving.
Van Reed, Mrs. J. H., a Japanese curiosity.
Verdier, Mme. Pauline, a case of bonnets and millinery goods.
Varney, Thomas, two large amalgamators, three small amalgamators.
Varney, Mrs. Thomas, an oil painting by Mrs. L. M. Spencer, of New York; a "Hebe," by Michael Angelo.
Van Winkle & Duncan, a fire repellingmachine, for competition.
Vou Roun, Miss, crotchet bed-quilt.

Wandersford, Mr., twelve pictures.
Wood, F. G, three pencil drawings.
Wasserman & Co., forty-three oil paintings.
Wheeler & Randall, a grinder and amalgamator.
Walton, E. W., a wine press, made in Amador county.
Walton, H. G., a case containing the statistics of the Mariposa estate.
Williams, W. H.—A couple of architectural drawings.
Webster, Miss M. G.—Two pictures in oil.
Wilson, P.—A model ship.
Wade, Miss Abbey T.—Two worsted worked patterns and a table cloth.
Winter, D. & H. A.—1 Wisconsin seed planter and cultivator.
Wright, J. O.—Shepherd's patent window blind, hinge and fastening.
Weidemann & Chappaz, Marysville—A case of bitters.
Watkins, Mrs., a silk quilt.
Walter & Co., G. F., a lot of men's clothing.
White, J. C., a table of fruit.
Wheeler & McAuley, a hydraulic pressure wheel, and a model of the same.
Wooll & Sutherland, a gilt table; three pieces of statuary; and two oil paintings.
Winter, Daniel, two glass signs in gilding and embossing.
Winter, George, two glass signs in gilding and embossing, and a script sign on glass.
Winter, R, twelve photographic specimens and paintings in water colors, and eighteen cartes de visite.
Waterman, Mrs Adela, a Eugenia opera-glass.
Weeks, Miss Emily D, two specimens of worsted work, one of Wa-bing-tou.
Welsfarean, Mrs. Elisa, a crochet bedspread.
Wadsworth, W, a patent American tiller.
Webster, Miss M E, an oil paintiug.
Wilson & Son, J, six horse-collars.
Woods, Mrs M E, a frame containing hair work.
Wagner, Miss, a small frame of hair-work.
Wood, G. M., a frame of stencil plates and impressions.
Weuzel, G. L., a small cask for two kinds of liquors.
White & Noyes, three reins and headstall of a bridle, manufactured by the Pimo Indians.
White, J. T, four pictures in water colors.
Weickhart, M., a fire-proof safe and a lot of moulding tools.
Well & Finck, a show case of cutlery and a hotel annunciator.
Worthley & Co., three pumpkins, grown on the Sacramento river.
Weed, C. L., thirty photographs.
Euler, H., a rosewood bureau.
Wollenburgher, Miss, a piece of crochet work.
Weed, Miss B., a piece of crochet work.

Yates, Mrs. C., seven tapestry pictures.
Yole, H.—A modern Indian canoe and an Indian bag

Zeik, Frederick, two pianos.
Zeepiare, Mr, eight water-color pictures.
Zwick & Lowen, nine boxes extract of coffee

AN EPITOME OF THE PEOPLE.

Whether the committee of arrangements have done so by accident or design, in their location of the articles on exhibition at the Mechanics' Fair, they have so arranged things that they afford a striking illustration of the principal characteristics of the people of California. For instance: When one enters at the main entrance to the Fair building by the center doors, the first things that meet his gaze are hogs, rotund barrels and cases of beer, ale, wine and whisky. Illustrating that these the lowest of the mere creature comforts, are not despised, though they have a rather prominent but still an inferior position in the general consideration. On the left hand, not far from the doors is a fine collection of boats, buggies and other vehicles, which illustrate the distaste a large majority of the people have for pedestrianism as a means of locomotion. On the right nearly opposite, a number of patent and other kinds of washing and wringing machines, and other labor-saving apparatuses for domestic purposes, illustrate the cleanliness that forms the fundamental trait in a Californian's character, and their dislike of the old fogy methods of washing. Just above these machines stands the printing machine of the Mining and Scientific Press, on which this paper was printed, showing that immediately after the common necessaries and conveniences of life, the next thing sought by our people is that mighty lever that moves the world—the Printing Press. These things form as it were the base of the exhibition—while right in its very heart, under the lofty dome, are arranged rich clusters of fruits and flowers in charming profusion, all growing with vigor and beauty, illustrating that in their hearts Californians cherish a deep-seated love for the natural and beautiful. On the right of the dome are located the many beautiful engines and machines for mining, manufacturing and agricultural purposes, illustrating that mining, agriculture and manufactures, are the right hand of the exhibition and people. On the left hand are a splendid array of the products of our local woolen and other manufactures; while a little beyond these, is an extremely interesting exhibition of the goods and wares of the Pioneer Glass Manufactory, including specimens of whatever it uses and makes, from the silvery white sand of which the glass is made, to the huge carboy for containing home made acids to the tiny phial to hold imported physic. Beyond this are truly magnificent displays of home made furniture of exquisit designs and beauty of workmanship and gorgeous collections of works of art, taste, virtue and utility—which illustrate the comforts and elegancies of social life so dearly prized by all Californians—these form the shoulders, and still further on, as it were at the very head of the Exhibition, are really magnificent collections of paintings in oil and water colors, crayon and pencil drawings. Here the still incipient art of Photography shines out in astounding perfection, the clear atmosphere of California being much in favor of our artists, while many of the paintings in oil, portraits of individuals and familiar scenes in various portions of the State chiefly, our artists finding sufficiently beautiful in nature to abjure the realms of imagination, are executive with a beauty of coloring and fidelity to nature not to be excelled by the artists of any portion of the globe. Here too are on exhibition almost incredible numbers of articles in wool, silk, beads, seeds, shells, and the countless other materials of which the nimble fingers of ingenious, educated ladies contrive to make so many beautiful objects. Some of the Berlin wool pictures on exhibition, from the brightness and correctness of the coloring and clearness of outline, when viewed from a short distance, appear as clear as oil paintings. Here too are the few, but very fine specimens of statuary on exhibition. Now do not these evidences of refinement in the head of the exhibition illustrate the taste and sentiments of the great mass of the people? We think this singularly happy disposition of the articles at the Fair presents a striking epitome of the characteristics of the people—a view which is not a little heightened by a knowledge of the fact that with many, their means are like the articles on exhibition, not as abundant as we hope they will be.

INFLUENCE OF MECHANICS' FAIRS.

As a means to an end, no plan has ever been devised of such direct and immediate efficacy for the cultivation of the mechanical, inventive and artistic genius of a people equal to the local Mechanics' Fairs. It is not claiming a whit too much for these Fairs in asserting that to their influence the United States owe their present proud position in the van of all nations for the inventive skill of their artizans, the superiority of workmanship, and the manufacture of machinery for so wide a range of purposes. These Fairs—peculiarly "a Yankee Notion," occurring periodically in every town and village of the Free States, particularly—afford a significant proof of the advantages a nation derives from free labor.

In our own young State, who will deny that such fairs have accomplished important ends in giving an impetus to arts and manufactures by offering the incentive of reputation and reward for excellence in every branch of local industry! The high value of labor among us, the wide fields for its employment our rich mines and those of the neighboring Territories offer, have doubtless much retarded the progress of all branches of manufactures, and has prevented many of our valuable natural productions from being brought into commercial importance. But with this serious drawback to contend against the advance of California in the arts, agriculture and manufactures, as exhibited by specimens at the present Fair is most gratifying and important. The manufactures of wool, and glass, on exhibition, for variety, quality and design, are not excelled by similar manufactories in any State in the Union. The value of the articles made directly from the natural productions of our soil—such as rosin, turpentine, kerosene, wines, spirits, and others—exhibit the variety of the as yet latent resources at our people's command—while the number, utility and character of the machines, and appliances of machinery for saving labor and other economical purposes, show that the the inventive genius of our people is active and triumphant. One important lesson these fairs have taught the people with incalculable advantage to the country, has been the intimate relationship between art and science.

There were good artificers in brass and iron before the principles of true science were conceived by man, but it was left till they were understood, to invent the steam engine, the electric telegraph and the sewing machine. The mighty pyramids of Egypt were erected without this knowledge, but the agencies that quarried the rock and piled up these works of labor without art or science, to be a wonder to all future generations, could not send men's messages of love or business around the world with greater speed than light itself through the air, the earth, or the waters beneath! There is a singularly beautiful illustration of this fact presented in the department of machinery. Here we find engines constructed with marvellous ingenuity, having for their motive power, steam, hydraulic pressure, running water, caloric and electricity, motors almost unknown in the last century. The very nature of the inventions introduced at this Fair, speaks volumes in favor of the mental superiority of our local mechanics. Here we find no contrivances to sharpen a pencil, clean a knife or rock a baby to sleep, such as so many of the eastern mechanics bother their brains in perfecting. But powerful and effective machines for crushing the hardest rocks to the finest powder, for pumping large volumes of water from vast depths, sawing the largest logs that grow in the world, or to save the impalpable particles of the precious metals. The very building that contains all these trophies of the victory of mind over matter, to be seen at the present Fair, is a work of mechanical art that will add luster to the history of the San Francisco Mechanics' Institute Fair of 1864. Its dome—the largest ever constructed in the world of boards and scantling, in beauty of proportion and science of its construction is not excelled by that of the famous St. Peter's at Rome. This beautifully proportioned structure is a worthy casket to contain the many gems of human thought, wrought into forms of power, utility and beauty more glorious than the diamonds, rubies, emeralds and pearls of the orient and occident combined.

Scientific Press.—A printing office has been established at the Mechanics' Fair, and Messrs. Dewey & Co., the enterprising publishers of the Mining and Scientific Press, are issuing from it a handsome double-sheet daily, which is a credit to themselves, its editors, and to the Fair.—*Morning Call,*

INDUSTRIAL EXHIBITION FOR 1864.

Industrial Fairs have become a great feature of the times, and have proven a most efficient means for advancing the industrial improvements of the age in which we live. By these we are best enabled to collect and disseminate information of a practical and tangible character. Without them much information that is valuable would long remain in a vague, uncertain state, which at best would be slow in exerting any important effect upon general industry. The benefits derivable from the frequent assembling of the manufacturers and producers of any community, with the evidences of their skill and industry with them, are manifold and beyond computation, and need no enumeration at the present time. In no portion of the globe are so many practical advantages to be derived therefrom as in our young, vigorous and rich, but isolated State. Experience has fully demonstrated that the only way to secure to California a steady, industrious, contented and permanent population, is to present fairly to all new comers, and to the world, the capacity of our State for sustaining, in comfort, a large population, independent of the glitter of gold, which most who come here foolishly imagine they will be able to pick up with scarce an effort. We must strive to dispel the idea, which is so apt to get control of the disappointed ones, soon after their arrival, that this is a dry, parched up land in summer, and a region of mud and flood in winter; that the inhabitants are chiefly made up of rude people, who have little or no regard for the refinements which they have left behind in their Eastern homes. How better can we do this than by gathering together, as we have now done, in in this great Industrial Pavilion, the tangible evidences of our producing capacity, embracing as they do something in almost every department of labor known to the civilized world.

Each age and country has new wants, which the progress of civilization creates, and which ingenuity promptly gratifies. Those of our day and section are more particularly confined to improved methods and machinery for reducing and separating the ores of the precious metals. A striking feature of the present exhibition is the number and variety of these improvements, which are now to be seen at the pavilion. Aside from the practical information which must be derived from this collective exhibition, we have here a most wonderful development of the inventive genius of our young and rising commonwealth—an exhibition of which every Californian may well be proud.

Let us point the new comer to these evidences of our industry, genius and resources. Where in the wide world at the present, or in all past time, can be found the community, of our age and strength, which can rival, or even reasonably approximate the display which the mechanics' of California are now making in this city? Let us take our new found and doubting friends by the arm, and walk with them through the aisles and avenues of our magnificent Temple of Industry, and ask them seriously if they can go away and pronounce California anything short of what has been claimed for her by her most sanguine friends. Take them through the Gallery of Arts, and ask them where on the continent, out of the three great metropolitan cities of the East, can they find a better display of artistical talent. Point them to the beautiful floral pyramid which adorns the interior arch of the great dome, and tell them that a display equal to that can be made in this city every month in the twelve! Go with them through our public libraries, and spacious, well ventilated reading rooms. Point them to our schools, public and private, and our well filled collegiate institutions. Have we no literary taste? Take them through our principal streets, point out to them our magnificent churches and other public edifices, and our splendid private residences, furnished with every luxury and comfort known to modern seekers after *otium cum dignitate*. Ask them to consider that they are walking the streets of a city but fourteen years old, and yet the fourth commercial city in the Union, and into which, on its eastern side, open the silver gates of an El Dorado, possessing riches and resources unequalled elsewhere on the globe, and out of whose "Golden Gate" pours a monthly stream of treasure which, in a decade, has nearly doubled the monetary wealth of the world. Show them all these things; prove to them that they are facts, which you can do, and then ask them where, in all the wide world, they will find an El Dorado, or an Elysium, that will compare with our own Golden State of the Pacific!

Fun should be cultivated as a fine art, for it is altogether a fine thing. Who ever knew a funny man to be a bad one? On the contrary, is he not, nine times out of ten, generous, humane, social, and good? To be sure he is. Fun—it is a great thing. It smooths the rough places of life, gives the world a round, jolly countenance, and makes the girls as pretty as June roses.

[Written for the Mining and Scientific Press.]

Letter from Reese River.

Editors of Mining Press:—Though the summer is passing away, we still live, and the star of hope that shone so brightly at the early dawn of our existence, still illumines our pathway. To those who are migrating hither and thither, the changes may appear more distinct and definite; but it is evidently true, that we, the inhabitants of "Silverland," are steadily advancing on the highway of progress. As I occasionally emerge from my cabin in the sage brush, to take a stroll through town, I behold a marked difference in business of all kinds, and I feel confidently assured, that the dull, murky atmosphere of financial depression that has for a time surrounded us, like the dense fogs that at times envelop your fair city, will pass away.

Far greater would have been the developments of Reese River at the present time, had the means been at hand to bring to light the hidden treasure that still lies buried in our hills. There are other reasons to which may be attributed the backwardness and dull times experienced here the present season, besides the lack of capital caused by the anticipated change of currency; some of which I will mention:

First, with regard to San Francisco incorporations. Many are the claims, to my certain knowledge, on which have been levied assessment after assessment, which have been liberally met by the shareholders who supposed that their interests were being duly cared for, and the work faithfully and energetically carried on, and that soon the mines would be in a paying condition, or of great value. But first, from the treasuries, secretaries must receive their allotted salaries, after which from time to time, small (and very small) advancements are forwarded to the superintendents here, who, in nine cases out of ten, find other ways for expending the money, than paying the laborer for his hire. Contracts are let on the claims, and glowing descriptions of the results given. But when the laborer finds himself unable to subsist on promises alone, the work stops. The claim which should have been down two hundred feet or more, with the amount of money raised, is perhaps down only thirty or forty, and nothing in reality of its real character known. The treasury is empty and notice of another assessment is given. Such, to a great extent has proved the bane of our prosperity.

Our mills also, have been too anxious to cancel their indebtedness, at the expense of our infantile exertions to arise. But thanks to our citizens for their untiring energy and perseverance, they have gone to work in earnest. Old wagons are becoming scarce among us, for every iron axle that can be procured, is converted into stamps, and at almost every house, that may be called the honest miner's home, a two, three, or four stamp mill may be found. In fact, physical power here, is getting the ascendency over steam, for in reality the hand mills are giving better satisfaction and larger returns, and at the same time making it a profitable business. The forty-two stamps that are driven by steam power here are not more (taking them all together) than what would constitute one good mill, yet what can be expected from so limited an investment. The fact is, we want more mills. The wants of our people demand them and our mines will warrant it. We want mills that will be generous and liberal; that will give to whom it is due, some little of the proceeds obtained from our rich rock.

To breathe one thought, or harbor a doubt as to the wealth or richness of our mines, is to distrust God; for he has created nothing in vain, and if this desert-waste were not rich in mineral, He alone can tell for what purpose it was created, for man lacketh the endowment to conceive. But we are not left to grope our way in the dark. Nature has sown profusely, that industry may reap plentifully. So long as we can find rock that will yield as high as two dollars per pound to the depth of twenty feet from the surface, we need not be disheartened. But that is not all; we have some lodes that are of the chloride nature—vastly rich, even to the depth of sixty and seventy feet, as if to toll us downward where we may expect to find it inexhaustible.

Sage Brush.

Austin, August 30th, 1864.

Curious Compounds.—An exhibitor of cordials and fancy drinks at the Mechanics' Fair, labeled some of his compounds—"Ladies' Tear Punch," "Anti-divorce Cordials," "The Souls Consolation Syrup," "Momus' Mixture" and other equally expressive titles. There is considerable pure spirit in his names whatever may be in his bottles.

EASTERN FINANCES.

By the splendid new steamer Sacramento, from Panama, we are in the receipt of Eastern advices to the 13th ultimo. The Money Market, in New York, at that date, was much easier at 7 and 8 ₱ cent. per annum, and the Stock Brokers were obtaining all the means they required at the former rate on call. The Stock Market was, however, exceedingly dull and prices for nearly all shares, except Government's, had declined. The volume of business doing at the Stock Exchange, was lighter than it had been for months past. In the general Merchandize and Produce Markets, speculation had subsided and trade was much restricted. The condition of the crops throughout the Northern States, was meeting with a good deal of discussion, and various opinions and theories were set forth as to the yield of the present harvest year. Late rains have materially improved the corn crop and the pastures, but came too late to save in many localities, oats and barley.

The yield of wheat, it is thought, will not average more than one half that of former years, but is of a better quality.

The product of rye, oats and barley will amount to about one half an average crop. Hay not quite an average in bulk, but of a better quality. Corn promises nearly an average yield if it ripens well.

A topic of interest in Wall street was the rapid advance in Government securities—some descriptions of gold bearing bonds had risen 5 ₱ cent. during the second week in August. Large orders from abroad and an easy money market were stimulating prices. The new 7-30 Currency loan of Mr. Fessenden was not meeting with the success anticipated and subscriptions were not averaging more than $750,000 per day. It is said, that thus far, the takers of this loan had been small capitalists and people who have a few hundred to loan the Government. The rich people of the country were holding back and did not give that hearty support the Treasury required.

COPPER INTERESTS OF DEL NORTE.

In the increasing attention which is being attached to our growing copper interest, we notice that the mines of Del Norte County are coming in for a share. Copper, unlike silver or gold, is usually found profusely distributed over mineral bearing countries, where they occur at all, and is perhaps the surest and most remunerative branch of mining which is carried on. When the discoveries of Copperopolis were first made public, persons not posted in copper mining were fearful that the deposits in that region were merely accidental and limited. Others whose experience was more extensive pushed boldly out into distant localities, following however, the general trend of the copper belt, until they have cross the northern line of the State and passed into Oregon. Everywhere, at intervals, throughout this belt, we find evidences of rich copper deposits, which time and money will ere long develop into rich and profitable mines. Passing northward, the copper belt appears to widen out, fan shaped, and where it reaches the Oregon line, we find it extending from the westernmost to the easternmost extremity of the State. But little has hitherto been said with regard to these extreme northern developments. Enough, however, is known to give unmistakable value to them. A large mass of copper ore may be seen at the Pavilion, taken from the Union mine, in Del Norte, which weighs 1,050 lbs., and which assays 34 per cent. in copper, besides containing two ozs. of silver and ¾ oz. of gold—making a total value of $116 for the block.

YOUNG MECHANICS would do well to establish two invariable rules:—First, do your work as your customer wishes to have it done. The other rule is to do it by the time you promise to have it done.

PRATER'S
PATENT CONCENTRATOR.
THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at
WHEELER & THAYER'S REDUCTION WORKS, NORTH BEACH, SAN FRANCISCO,
To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.
This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to
HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st, 1864. 1v8-tf

Hepburn & Peterson's
AMALGAMATOR.
THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from
Gold and Silver Ores,
Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.
These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.
☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

nov8 3m*

WHEELER'S
Amalgamating & Separating Pans.
IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.
The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.
Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.
*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.
ALL PERSONS INTERESTED IN MINING MACHINERY are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.
No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.
A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

IMPORTANT DISCOVERY
— IN THE —
Photographic Art.

Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.

[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.
Prices, from $50 to $1,000.
ROUND AND SQUARE WATER TANKS BUILT TO ORDER.
HUNT'S PUMPS
Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.
HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood,
ALSO, THE
Self-Regulating Horse Power
Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.
ALL WORK WARRANTED.
☞ For further Particulars see small circulars. ☜

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal xperience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continua to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies, Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

SCIENTIFIC PRESS.—A printing office has been established at the Mechanics' Fair, and Messrs. Dewey & Co., the enterprising publishers of the Mining and Scientific Press, are issuing from it a handsome double-sheet daily, which is a credit to themselves, its editors, and to the Fair.—*Morning Call.*

New This Week.

Aspinwall Gold and Silver Mining Company, Amador District, Lander County, N. T.

CAUTION.—The public are hereby cautioned against negotiating for the following described Certificates of Stock of the above named company, as the same were sold for delinquent assessments, on the 13th day of August 1864, and will not be transferred on the books of the company, to wit:

Certificates No. 80, 81, 82 and 83, standing in the name of B. T. Hunt Certificates No. 71, 72, 73, 74, 75, 76 and 77, standing in the name of W. D. Mathenay.

11 JOSEPH HEALY, Secretary.

Astor Gold and Silver Mining Company, No. 436 Jackson St., City and County of San Francisco, State of California, Gold Hill Mining District, county of Story and Territory of Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 10th day of August, 1864, the several amounts set opposite the names of the respective shareholders as follows:

And in accordance with law and an order of the Board of Trustees, so many shares of each parcel of said stock as may be necessary will be sold at the salesroom of Messrs. Cobb & Sinton, No. 406 Montgomery street, San Francisco, Cal., on Thursday the 8th day of September, 1864, at the hour of 10 o'clock A. M. of said day, to pay the said delinquent assessment thereon, together with the costs of advertising and expenses of sale, unless said assessments, with accruing charges, are previously paid.

LAWRENCE C. OWEN, Secretary.

Office, No. 6 Masonic Temple, N. W. corner Montgomery and Post streets. 9-4t

POSTPONED.—The above sale is still further postponed until Saturday morning, the 10th inst., at 10 o'clock. By order of the Board of Trustees.

11 LAWRENCE C. OWEN, Secretary.

Logan Gold and Silver Mining Company, El Dorado Canon, Arizona Territory

The Annual Meeting of the Logan Gold and Silver Mining Company will be held at the company's office, No. 523 Clay street, San Francisco, California, on Monday, September 26, 1864, at 2 o'clock P. M., for the election of Trustees, and the transaction of such other business as may properly come before it. (10-4t) B. W. MUDGE, Secretary.

La Candelaria Mining Company, San Dimas, State of Durango, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 23d day of August, 1864, an assessment of two dollars and fifty cents per share was levied upon the assessable stock of said company, payable immediately, in United States gold coin to the Secretary, at the office of the company, No. 623 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 8th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of of the Board of Trustees.

GEORGE A. HILL, Secretary.

Office, No. 623 Montgomery street, San Francisco, California 9-4t

Mechanics' Gold, Silver, and Copper Mining Company, Clayton Mining District, Contra Costa County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of the said Company, held on the 24th day of August, 1864, an assessment of five (5) cents per share was levied upon the capital stock of said Company, payable on the 27th day of August, 1864, in United States gold coin, to the Secretary, at the office of the company, No. 322 Front street, or to J. W. Cassiday, Superintendent at the mine.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 8th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

A. R. WINEGAR, Secretary.

Office, 322 Front street, San Francisco. 9-4t

New Era Copper Mining Company, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 23d day of August, 1864, an assessment of fifty cents per share was levied upon the capital stock of said company, payable on the 26th day of September, 1864, in United States Gold Coin, to the Secretary, at his office, on the southwest corner of Washington and Stockton streets, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 24th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 10th day of October, 1864, to pay the delinquent assessment, together with costs of Advertising and expenses of the Sale. By order of the Board of Trustees.

C. B. TOWLE, Secretary.

Office, southwest corner Washington and Stockton streets, San Francisco. 9-4t

Ostpee Gold and Silver Mining Company, El Dorado County, California.

And in accordance with law and an order of the Board of Trustees made on the aforesaid dates, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the Companies, 305 Montgomery street, San Francisco, on Thursday, the 15th day of Sept. 1864, at 11 o'clock, A. M. of said day, to pay said delinquent assessments thereon, together with the cost of advertising and expenses of sale.

San Francisco, Aug. 8th, 1864. J. S. LUTY, Sec'y.

7-4t Office, 305 Montgomery Street.

Salamander Gold and Silver Mining Company, Mill Valley District, Calaveras County, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of ten cents per share was levied upon the assessable capital stock of said Company, one-half payable on the 16th day of August, 1864, in United States coin, to the Secretary of said company, and the balance payable in thirty days from said 16th day of August.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 4th day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

F. D. OALLAGHER, Secretary,

Office, No. 35 Metropolitan Block. 8-4t

Lost!

Certificate No. 191, of 150 shares, of the Table Mountain Copper Mining Company's Stock, standing in the name of N. B. Edmiston. All persons are cautioned against negotiating for the same, as transfer has been stopped.

M. O. ELMORE, Secretary,

San Francisco, August 25, 1864. [9] T. M. Cop. M. Co.

San Francisco Moss Ledge Company, San Francisco District, A. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 16th day of August, 1864, in United States Coin, to the Secretary, at his office, No. 618 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 28th day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

ROBT. T. POLK, Secretary

Office, No. 618 Merchant street.

Silver Mountain Mining District, California.

And in accordance with law, and an order of the Board of Trustees, made on the 13th day of July, 1864, so many shares of each parcel of said Stock as may be necessary, will be sold at the auction room of Jerome Rice & Co., No. 327 Montgomery street, on the 27th day of August, 1864, at the hour of 11 o'clock A. M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

WM. H. MARTIN, Secretary.

Office, 627 Clay street, San Francisco, Cal. 7

Postponement.—The above sale is postponed until Wednesday, September 7th, 1864, at the same hour and place. By order of the Board of Trustees.

9 WM. H. MARTIN, Secretary.

Postponement.—The above sale is postponed until Wednesday, September 14, 1864, at the same hour and place. By order of the Board of Trustees.

10-1 WM. H. MARTIN, Secretary.

Zenith Gold and Silver Mining Company, Mountain Ranch District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1864, an assessment of 50 cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin to the Secretary, at the office of the company, No. 621 Clay street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday the 17th day of September, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 3d day of October, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

M. O. ELMORE, Secretary.

Office 621 Clay street, San Francisco. 8-4t

SHEEP SHEARING BY MACHINERY.—This seeming impossibility was exhibited before a large collection of ladies and gentlemen at the Mechanics' Fair, yesterday, by Jenkin's Power Sheep Shearer, a beautiful and most ingenious little machine invented for that purpose, with which the inventor stripped off the fleece of an old gentlemen sheep in less time than it used to take an energetic foreign mining tax collector, in some of the mining counties,to strip the coat from a repudiating celestial, and that did not use to take very long. Another exhibition will be given on Monday at 2 P. M.

LIBERAL.—A. F. Blood, President of the Plumas county Sanitary Fair, held on the Fourth of July last, having ten shares of the North Superior Copper mining stock, and five of the Superior mining stock, valued at $450, remaining after the disposal of the objects donated to that Fair, has presented this stock to the Sanitary Commission, for the benefit of the soldiers of the Union ARMY.

WINE AND CIDER.—These two articles are made to delicious perfection at the Fair by J. Halstead, with a very ingeniously contrived press, of California invention and manufacture, from California grown fruits, the whole process being conducted in the Pavilion, where any one may see that it is the genuine juice of the grape and apple that they drink, and not any of those deleterious compounds of cheap chemicals sold under the names of cider and wine.

A SPLENDID SPECIMEN OF CARRIAGE BUILDING.—Pollard & Moore the carriage makers of Webb street, have on exhibition a double rockaway carriage that is the finest specimen of carriage building ever made in this State, every portion of it being manufactured in this city. The iron work of this beautiful specimen of real art, is polished as highly as a steel knife blade; the leather work is most elaborately worked, in designs stitched with white silk; the cushions being made of the finest blue broadcloth, while every recent improvement, and many original methods to give strength lightness and beauty to a vehicle, are all employed in this beautiful carriage, which is well worth an inspection by carriage buyers. It is one of the finest specimens of home mechanical skill in the Fair.

FOR THE SANITARY FUND.—To-night Harry the one armed soldier, will sell a quantity of very fine fruit at the Mechanics' Fair, for the benefit of the Sanitary Fund. We hope the cause, the excellence of the fruit and the liberality of the generous donor, will have the effect of raising a handsome sum on the occasion.

THE MARKET STREET MUSEUM is attracting crowds of both juveniles and adults. Everybody goes to see the curiosities.

Programme of the Fair.

Until further notice the Pavilion will be open for the admission of visitors

At 9 o'clock A. M., every day except Sundays.

ADMISSION:

Season Tickets for Lady and Gentleman	$5 00
Season Tickets for one person	3 00
Season Tickets for Juveniles	1 50
Tickets for single admission	50
Tickets for Juveniles, single admission	25

Tickets may be had at the Institute, on California street, or of any member of the Executive Committee, or at the Pavilion.

SPECIAL NOTICE.

THE MANAGERS OF THE FAIR are willing to receive articles for exhibition, but desire to inform those interested that where articles are entered at this late day in competition for premiums, satisfactory proof must be given that they were in an advanced state of preparation for that especial purpose before the Fair opened. They desire to do justice to all concerned, and not to rule out articles which have been prepared at the cost of much time, labor and money, but not completed quite so early as intended.

EUREKA SELF-ADJUSTING Clothes Wringer.

THESE Wringers are far superior to any ever before offered to the public in the employing of strong elliptical steel springs, by means of which all articles varying in size receive uniform pressure. Buy one, give it a trial, and if it does not work satisfactorily, return it. They may be seen at the Mechanics' Fair Pavilion, where orders will be received for the same.

Also for Sale at 135 Montgomery street.

M. E. TRAVER & BRO.,
(3) Agents for Pacific Coast.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examiner in charge finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government has, for common reasons, withheld a patent. Against none of those contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $40 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, procuring it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a careful investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our clients, for which fee we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a moderate proportion of the extra fee, if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, procuring it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a careful investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our clients, for which fee we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a moderate proportion of the extra fee, if the patent is allowed, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success, by having the case investigated, will themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & CO., Mining and Scientific Press, rooms 56 and 57, Government Insurance Office of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the inventor.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the Judges of the U. S. Circuit Court of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

No. 2—Volume IX.—July 9, 1864.—Department of Agriculture; No Candidate for Presidency; Letter from Austin; Gun Cotton vs. Gun Powder; Scientific Explorations; Election of Officers; Brief Mention; Open Sesame Company; Wide West Company; Wall Street Gamblers; The Blue Ledge; Mining Share Market: Iron the Basis of Modern Industry; Quite a Novelty; Gold Productions; MINING SHAREHOLDERS' DIRECTORY; Roasting Silver Ores; Ductility of Gold; Copper Smelting in California; Brain Work and Longevity; Copper Smelting at Detroit; Beecher's Visit to a King; Man's Only Power Over Nature; Mechanical and Patent Department—Labor Saving Machinery, Heavy Forging, New Inventions, Peitsch's Ore Separator, Washing and Pressing Machine, Improved Knapsack, Dodge's Amalgamating Machine; Summary of Mining News—Washoe, Reese River, Esmeralda, Owens River, Humboldt, Arizona, Holcomb Valley, Santa Catalina; Cricket War; Gold Hill Mines; Novel Cooking; Stock Reports and Miscellaneous Items.

No. 3—Volume IX.—July 16, 1864.—The Industrial Exhibition; The Art of War; Power of the Magnet; The Conflagration of the World a Scientific Possibility; More about the Theory of the Mirage of the Sierra Nevada; How to Detect Adulterated Quicksilver; The Cause of the Flow of Oil Wells; The World's Drought of 1864; The Salt Trade of Washoe; New Era in Portraiture; Formation of Iron by Metallurgized Insects; Old Wrinkles Knowing a Lawyer when Sick; Weather and Health; Efficacy of Onions; Boiling Water; Shareholders' Directory; Stock Reports—Sales and Prices Bid and Asked; Inventors and Inventions; The Lenoir Gas Engine; The Rivet Process; Improved Hoop Fastening; A New Journal Box; Value of Evening Hours to Mechanics; Value of Skillful Stoking and Firing; Iron Ore in Reese River; Our Summary of Mining News—Humboldt, Washoe, Reese River; Washoe Coal Co.; Volcano in Butte Co.; Gold in a Corner; Looking Eastward; Esmeralda; Mining Share Market; From Owensville; Songs of Birds; Items of Interest; etc.

THE MINING AND SCIENTIFIC PRESS is published every Saturday morning. Each number contains SIXTEEN PAGES of sixty-four columns. Terms, by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very fair

DEWEY & CO., Publishers.
Office, 57 Government House, Corner Sansome and Washington streets.

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the Press upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

RICHARD WEGENER,
Accountant, Mining Secretary,
AND GENERAL AGENT.
No. 204 Montgomery St., Southeast cor. Montgomery and Pine Sts., San Francisco, 11-m

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,
Publishers of the Mining and Scientific Press, Nos. 56 & 57 Government House, Corner of Washington and Sansome streets, San Francisco.

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardeness. Terms of subscription: One week by mail, $00; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, SEPTEMBER 17, 1864.

VOLUME IX. Number 12.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

ROPER'S CALORIC ENGINE.

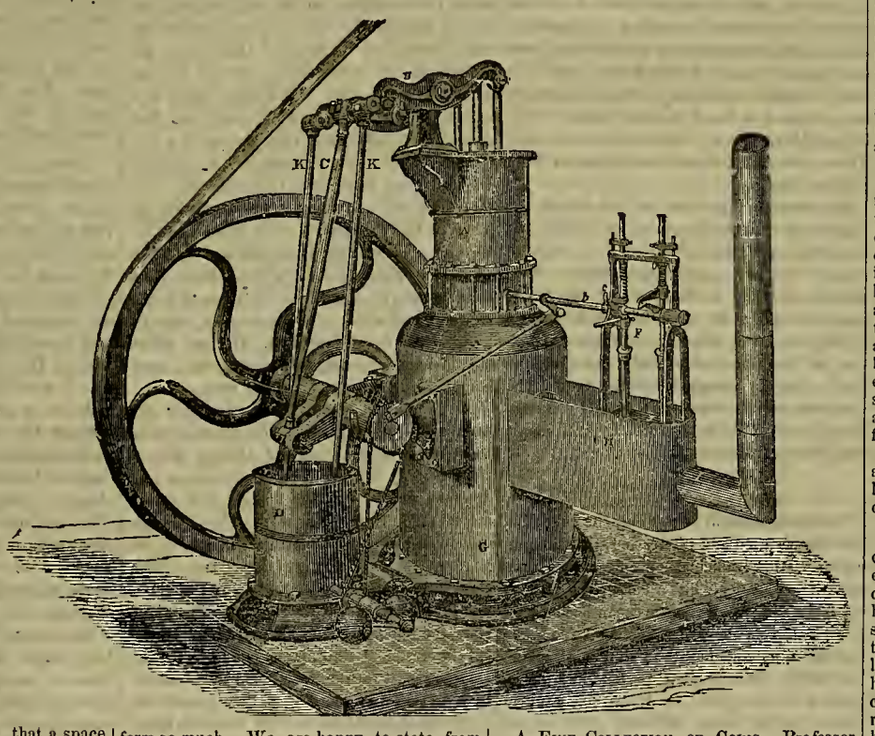
One of the most beautiful applications of the principles of science to manufactures is the comparatively recent introduction of caloric as a motive power for driving machinery. It must be admitted that Erriesson is entitled to the honor of reducing the principles of this valuable power to a practical form for the people of the world. The same genius that abandoned the well trodden paths of ship building, und created an innovation in that branch of manufacturos, which saved our country and revolu-tionized the construction of the navies of the world, subjected the mysterious latent power of heat to his will and added another auxilliary to human progress, second only to steamitself.

This great power as introduced by Erricsson, has been much improved by Roper. The beautiful little engine that runs our Gordon Press at the Fair, on which the DAILY FAIR PRESS is printed is one of this inventor's engines. the difference between which and that introduced by Erriesson is as great as between the engines first built by Watt, and one of the most improved engines of the best makers of the present day. Erriesson's Engines exert their force horizontally, have a separate chamber for heating the air before it enters the cyliuder, is complicated, bulky and expensive Roper's Engines are direct acting, exerting their force vertically, are so simple in their construction that any man of average intelligence can take charge of them without risk. They are so compact in structure that a space of less than five feet square is sufficient for working one of 10-horse power; danger of explosion there is not, cannot be, with an engine that has no boiler and a cylinder not much larger than a common bucket in which the air, cold from the surrounding atmosphere is forced into the furnace. It is the expansion of this air, by the heat of the furnace that forms the power of the engine, a more simple or economical force it were not possible to imagine. The adaptability of these engines for the various branches of manufactures is well illustrated by that in operation at the Mechanics' Fair, which, though of but 2-horse power, and at a cost of less than 75 cents per day, drives our press, a circular saw, one of Staanard's large lift and force pumps, and a five stamp battery for crushing quartz is being put up and will be worked by it when completed. If there is any other power in use as a motor for machinery that will do as much for as little cost, our acquaintance with machinery, somewhat extended, has failed to bring it to our notice.

One of these engines such as that at the Fair, costs delivered here, about $800, which places them within the reach of every one requiring machine power for any purpose.—Though it is less than two years since Roper's Caloric Engines were introduced as an experiment in a shoe factory in Massachusetts, such is the demand for them that the supply does not half equal it, though a very extensive establishment is kept employed night and day in their manufacture.

It was the expressed opinion of many scientific savans that the beautiful little engine at the Fair would not perform the work claimed for it, that it would break down, as it was impossible that with such a power it could perform so much. We are happy to state from our own observation that although, this little engine has been put to the severest tests to satisfy the crowds who are at all times examining it, it has continued to perform its duties without cessation for the past ten days, requiring nothing but a little oil to lubricate its parts, and a few handfuls of coal to keep up the fire. We commend merchants, millmen, storekeepers, shipowners, and every class of person requiring machine power to examine Roper's Caloric Engine which is of universal adaptubility, cheap, safe and durable. More cannot be said of any engine ever inveated.

We re-produce the article, published in our yesterday's issue, descriptive of Roper's Caloric Engine, and introduce in connection with it an illustrative represeatation of the machine. Some slight improvements have been made since the above drawing was prepared, which produce a slight variation between the present machine and the illustration.



A NEW NORTH AMERICAN CONFEDERATION. An important movement is now on foot, having for its object the establishment of an independent Confederation of all the British Provinces on this Continent, upon the same basis as that upon which our own confederacy is founded. Both the Canadian and Columbian journals appear to think well of the movement, and admit that it is both wide-spread and powerful. The British *Colonist*, published at Victoria, August 30th, says that it meets with general favor among the masses, and further adds, as follows: "It would not surprise us in the least if within the next four years we had another Republic established on our continent, formed of the same materials as those that originated and laid the foundation for our own glorious Government."

A FINE COLLECTION OF COINS.—Professor De Laguna of the City College has a case on exhibition at the Fair containing a fine collection of coins and medals in gold, silver and copper, a great many of which are of our own country. The collection of copper cents is particularly fine—the best and largest on this coast, where the collection of any other coin than such as is good for circulation occupies the attention of none but the student or savan. This collection is of use as exhibiting the improvement in American money within the last century, our double eagle being by far the finest and most valuable coin in circulation in any country in the world.

THE DERRINGER PATENT CASE ENDED.—The case of Henry Derringer *vs.* A. J. Plate which was a suit brought for an alleged infringement by the defendant on the patented weapon known as the Derringer pistol, has been settled by judgment being rendered for defendant on demurer.

STEAM BOILER EXPLOSIONS.—An Insurance Company has been established in London with a capital of $500,000 for the especial purpose of insuring the risk of property or life from the explosion of steam-boilers. The company is said to be in a flourishing condition. There is also an institution known as the "Railway Passenger Assurance Company," the operations of which are substantially as follows:—

At the railroad and steamboat stations tickets are on sale by the Clerks, who, upon the request of the passenger, and upon the payment of a small premium—3 pence, we believe, on every £100 insured—hands him or her a ticket guaranteeing the payment of the sum insured, up to £1000, to the family of the passenger in case of death, or an allowance of a sum not exceeding £6 while laid up, and a full compensation for the loss of limbs. This Company has also become a great success, having paid upwards of eight thousand claims, and has extended its operations to indemnification against almost every variety of accidents that can befall a human being, whether in walking, riding, driving, hunting, shooting, fishing, or when at home. The full advantages the Company offer, namely, £1,000 in case of death by accident, or £6 when laid up from the effects of one, can be secured by the payment of an annual premium of £3 per annum.

BAKERS' STRIKE IN NEW YORK.—The journeymen bakers, of New York, at last accounts were on a strike, and the proposition was under consideration to hold a grand mass meeting, or parade through the city in force, with the intention of obtaining the sympathy of the public for their demands of "less hours to work and an advance of twenty five per cent upon their present wages." They desire, also, to do away with all night-work, contending that bread made at half past four to-day is fresh enough for to-morrow. The Union numbers some two thousand five hundred in that city and Brooklyn, although its existence dates but five months back.

THERE are some people who live without any design at all, and pass through the world like straws on a river—they do not go, but are carried.

HEROIC ACT.—While a train was rushing on its way some thirty miles from Chicago, the engineer on approaching a bridge, discovered a child struggling in the water. With most heroic courage he instantly gave the signal for stopping the train, then running at a speed of thirty-five miles an hour, and jumped from the locomotive into the water. When the train had stopped, the brave fellow had rescued the child, and was climbing up the bank of the river with it in his arms. The name of this brave engineer is Charles N. Thompson, and he is a native of Taunton, Mass.

STARS CHANGING COLOR.—Important changes have been noticed, sometimes at long and sometimes at comparatively short intervals. Among the most noted of these changes at long intervals is that of the dog star, Sirius, known in ancient times by its reddish tint, spoken of by Horace as *rubra canicula*, and by Seneca as having a more vivid color than Mars, *acrior ruber*. It is now without any perceptible color.

COME TO THE FAIR.—Our friends from the interior, who have not already done so, should not fail to come to the city during the present month, and visit the Mechanics' Fair. It is a sight no one can afford to lose, for it will be a long time ere they will be permitted to look on its like again. The exhibition is not only interesting, but eminently useful and highly instructive.

Mechanics' Industrial Fair.

Reports for the Week.

The following information concerning the Mechanics' Industrial Fair, is taken from our *Daily Fair Press*, printed and issued at the Pavilion. The reports were prepared by a special reporter.—[Eds. Press.

[Monday, September 12.]

THE ARTS' DEPARTMENT.

As the number and value of the natural productions and manufactures of a people are the surest index of their enterprise, skill and wealth; so the cultivation of the arts and the extent to which they are patronized, is an index of their intellectual refinement and civilization. Judged by this standard—and it is an unerring one—the department of art, at the Mechanics' Fair, is alike flattering and honorable to California. At this exhibition, while we find but few of those venerable works of sculpture and painting, so highly prized in the collections and galleries of the old world, among which sylvan scenes in imaginary Utopias, and mythological portraits of demigods and goddesses, or sinning saints form the leading subjects; we have what is far better—scenes in our own lovely land, with its cloudless sky and spots that for beauty and grandour, are not equalled on the world's wide surface; for where shall we look for the majestic, mysterious magnificence of the stupendous valley of the Yosemite, with its Bridal-veil fall? Where shall the artist wander to find a grove of trees equal in tint of bark and foliage, proportion or beauty, to the Mammoth groves of Calaveras and Mariposa? Where shall the lover of the picturesque wander for inspiration to guide his pencil in delineating Nature's unadorned, yet most lovely features? where can he find scenes equal to the craggy cliffs and peaks of the lofty Sierra Nevada, with their many tinted vegetation? Where can nobler specimens of intellectual men and lovely women be found than among the healthy and wealthy population of our own State, with its beautiful climate, golden sands and silver bearing mountains? These form the subjects that adorn the art galleries of the Mechanics' Fair. Here are scenes of quiet pastoral beauty never excelled by the great Gainsboro; effects of light and shade that would honor a Maclise—and magical illusions of distance that the great Turner himself would certainly admire, while in the department of portrait painting and photography there are countless magnificent specimens. California, it must be admitted contains some of the most efficient photographers in the world, as some of the specimens on exhibition demonstrate. To one of them, Mr. Weed, is due the honor of transferring to form the "shadow of a shade;" which he has done in one of his magnificent series of thirty views of the Yosemite Valley, in which the reflection of the trees and objects on the margin of a lake are clearly given in reflection, with a beauty and distinctness truly marvellous. Some of the plain photographs exhibited by Bradley & Rulofson, in a peculiar tint of sepia brown, both in clearness and charm of novelty are much to be admired.

The sculptures on exhibition like the pictures, are confined to California subjects. Busts of distinguished citizens, of which there are several of the ever to be lamented Starr King, those of Broderick, Peter Donahue, Weller, Brannan and many others, the fidelity to the originals of which render their recognition universal. There is one bust of a boy executed by Devine, of Sacramento, that possesses the additional charm of not alone being a work of California art, but the material is California's too. It being cut from a block of the beautiful Columbian marble, a material possessing all the points of excellence of the best imported Carrara. Altogether the Art Exhibition is magnificent and will repay long and oft repeated visits to the three large rooms devoted to it.

FURNITURE.

The furniture manufacturers and dealers occupy an extensive space in the Pavilion, and their articles form one of the most creditable displays at the Exhibition. Messrs Goodwin & Co. of 528 Washington street, exhibit a beautiful parlor set of rosewood and brocatelle. The set consists of twelve pieces and is valued at $1,500. The backs of the chairs are elegantly carved and wrought entire from a single piece of wood. The silk was imported in the piece and the wood work of the furniture in the rough. The finishing has all been done at Messrs Goodwin & Co.'s establishment. The same firm also exhibit a dining set of much elegance, manufactured entirely by them out of California oak. They also exhibit a finely finished sideboard, settee, etc., together with a splendid rosewood attachee, valued at $350, all of their own manufacture.

B. P. Moore & Co., corner of Pine and Sacramento streets, exhibit elegant rosewood, oak and walnut sets, in modern and antique styles, all manufactured by them in this city. They exhibit one set in the rough, without paint, varnish or covering, to show the workmanship. Among their collection we notice, cabinets, wardrobes, sideboards, sofas, lounges, chairs, bedsteads, etc. The display of this firm is a most gratifying and creditable exhibition of California manufactures in this line.

Mr. Charles Andrews exhibits a carved black-walnut bedstead and a secretary, with a neat and ingenious arrangement of drawers. His carved crusader, female heads, medalions, birds, fruit, etc., are quite artistic. Victor Coppe exhibits some very fine wood turning, also an elegant cradle, which appears to attract much attention from the ladies. Warren Holt exhibits Rankin's improved school desks which are now being introduced into the public schools of this city, and many of those in the interior. Horstman & Co., exhibit an elegantly carved side board and chess table of walnut and rosewood, manufactured by them in this city and valued at $80. A. Conrad shows a finely finished rosewood bookcase and cabinet, also manufactured in this city, from the imported wood. Easton & Bro., exhibit a black walnut bookcase and French secretary, manufactured in San Francisco; also a secretary of Mexican rosewood made by them here. These pieces of furniture are valued at from $150 to $300.

We presume that there are but few of our readers who had any idea previous to the opening of this exhibition of the large amount of elegant furniture manufactured in this city; or that so many woods native of this coast was capable of such fine finish. It is only by exhibitions of this character that the capabilities of our mechanics and manufacturers can be properly brought before the public. The furniture manufacturers of this city use large quantities of California laurel, Oregon maple and Mexican rosewood.

[Tuesday, September 13th.]

MISCELLANEOUS ARTICLES.

In this department of the Fair the collection is so large, varied and interesting, that in making a selection sufficiently brief for a newspaper article, one feels like a child who, gathering shells and pebbles on the ocean beach, finds at each step so many of the objects he seeks that he is only made aware that his pockets are full by their refusing to hold any more, when he is compelled to throw away many things that he would fain carry; this is precisely our case. We had gathered notes of thousands of objects that well deserve passing notice, could we find room to notice them.

We cannot omit the bag of flour that gained the prize at the first Fair, in 1853, when the manufacture of flour was considered but an experiment, whereas now it proves one of the most important branches of our State's production; and in place of importing that article from Chili, Australia, Europe and the Atlantic States, as we did for the first few years of our existence as a State, the flour and wheat of California proves a staple article of export to those countries, and holds the highest place everywhere for excellence. The first box of raisins ever made in the State, a year or two ago, and the first piece of rosin, made equally recently, are other objects suggestive of the *vim* and enterprise of Californians in carrying out any new business that promises to pay. Both these branches of business, never thought of till within a year or two, are of immense importance and extent; that of the latter so much so, that legislative enactments are called for to save the destruction of the forests in some parts of the State, which are being destroyed at a rate that promises to make some counties destitute of timber for fuel in a very few years. The manufacture of rosin, and its product turpentine is sufficiently extensive to more than supply the demand for home consumption.

In this connection it may not be out of place to state that this important branch of our home manufactures owes its origin almost solely to the manufacture of Hucks & Lambert's famous axle grease, which is formed by the distillation of rosin, there being not a particle of grease in its composition. The curious relics of the lost races of Indians, in the shape of weapons of war, ornaments and culinary utensils, all made of stone. How suggestive are these silent but expressive objects of the change in the country and the advancement of man within the era of man's existence. However, we must not stop to philosophise, but must proceed. Another object worthy of attention, the first of the kind, we think, ever exhibited at a Mechanics' Fair, is the showcases containing articles from the Russ House Laundry as specimens of washing and ironing. In these cases are ladies' wearing not-mention them, gentlemans' shirts, collars, etc., gotten up as the saying is "better ash new. Then there are picks for miner's use, with patent eyes and fastenings, steam bathe that generate the necessary hot water, curious historical antiquities of our own and other countries, such as fragments of the coffin and tomb of Richard the Third, the crooked-backed tyrant whom Sheakspeare has immortalized, and whose representation on the stage furnishes so fine an opportunity for third rate actors "to tear a sentiment to tatters;" then there are autographs of Washington, written by the hand that wielded the sword that "made us a nation," and of President Monroe, who laid down the principle that that nation as a free republic must govern America, a principle which in good time, with God's blessing, will be carried out, and many other interesting objects of this character. Then there is a beehive, in solid rosewood, carved and polished with great elaborateness, a fit residence for a whole swarm of queen bees. Balances of power to weigh half a ton, or the hundredth part of a grain, with equal exactness. Optical, philosophical and astronomical instruments, of most complicated forms and singular uses.

A gimping machine, the first and only one ever made on this coast for manufacturing those tortuously wound and twisted decorations used by the ladies for their dresses and bonnets, and by carriage makers and upholsterers for finishing their work. This little machine is a marvel of mechanical ingenuity, beyond mortal mans' power of description. Then there are beautiful models of full rigged ships, and of the hulls and parts of others, which show the importance of this portion of our local interests. California is bound to be the shipping mart of the world, and these models by local builders show that they possess the ability to compete successfully with the builders of any port in the world. Then there are compounds gaily decorated for making the hair grow on the top of the head, the place where the hair ought to grow, but refuses to do so on some persons who have such a development of forehead that it extends to the back of their necks, and other compounds to turn its too warm or too much frosted tints to sombre brown or solemn black, and upwards of twenty thousand other objects that range between a ladies pin-cushion and a 50-horse power steam engine, which we consider includes everything within the range of the arts, sciences and manufactures.

[Thursday, September 15th.

MINERALS.

The present being exclusively a Mechanics' Fair, devoted to the exhibition of the manufactures, machinery and natural productions of our own immediate locality—it was not to be expected that a very large display of minerals, ores and metals in their crude state, the product of the inland counties of the State, would form a very prominent feature. But we had expected to have seen more of these substances in which California is so rich, exhibited at its Metropolitan Fair. We are certain that there are many private gentlemen in the city who have collections that would have been both an interesting and instructive feature at the Fair had they been exhibited. It is scarcely possible to over estimate the advantage to the State that have been derived by familiarizing the popular eye with the appearance of the many strange but abundant and valuable minerals to be found in nearly all sections of the State. We esteem it as one of the greatest advantages derived from such exhibitions as Mechanics' Fairs, their making the masses of the people acquainted with materials and their manufactures, otherwise not likely to come under their notice. The exhibition of minerals at the Fair are scarce deserving of notice, if we except, the huge masses of coal from the Mount Diablo mines, and of copper from Copperopolis, and Red Bluff. 'Tis true, there is a collection of minerals in a glass case from the Occidental Hotel, but this is a collection more important for their intrinsic value than as a means of familiarizing the popular eye to the appearance of minerals. There are also some large masses of galena and other argentiferous ores from Washoe, Mexico, and a few other localities, interesting as specimens, but nothing more. One of the finest of these is a large mass of chloride of silver from Reese River exhibited by North Point Smelting Works, this specimen is valuable as showing that a very unseemly looking rock may sometimes be of immense value. The chlorides of silver, though presenting none of the appearance of that metal, contain not unfrequently from 50 to 60 per cent. of it, illustrating our argument of the advantages to be gained by making such unusual ores familiar to the popular sight. There is probably not one person in a hundred who examine this specimen that would credit that it is worth $6,000 per ton.

There is also a fine collection of specimens of gold bearing quartz from Whisky Hill, Tuolumne county, and one or two other places, very rich and handsome, but gold has become so familiar to every man, woman and child on this coast, that almost every one is prepared to go "prospecting" for that metal. Those who are interested in this matter will observe a very remarkable peculiarity in the gold from Whisky Hill. It is of a much lighter tint than is usual with California gold, and in place of being in grains or threads disseminated through the rock, this gold is in broad flat bands and plates, the faces of which in some cases are beautifully crystalized, forming most elegant specimens for a cabinet collection. The most interesting exhibition by far, in this department of the Fair is connected with salt, a mineral that exists in inexhaustible abundance in almost all portions of this coast. Mr. Winnegar, of Front street, has a fine display of this material both in its crude and manufactured state. Some of the native salt from Arizona is nearly as hard and transparent as quartz crystals, and appears at the first glance more like quartz than salt. The greater portion of the salt manufactured by Mr. Winnegar is obtained from San Pedro, near Los Angelos, the purest native salt probably in the world, it showing by numerous analyses by different persons, 97 parts salt out of a hundred, the remainder being lime and magnesia. This one establishment manufactures 100 tons of fine salt per month, and could dispose of much more if they could make it. Mr. Winnegar also exhibits specimens of salt from Carmen Island, San Quentin, Sonoma and many other places. As an evidence of the improvement in the manufacture of this article, he exhibits the box of salt that obtained the prize at the Fair in 1860, which is as inferior in color, fineness and quality to that manufactured now, as the course dairy salt of Liverpool is to the refined salt of California. The manufacture of salt on this coast, has reached the extent of millions of dollars' worth annually. In Washoe alone the consumption of salt for amalgamat-

ing purposes exceeds a million a year, while in our own State, principally for domestic purposes, it far exceeds that amount, nearly all of which is produced from our own resources, but little salt at present imported, while quite an extensive export business in this article is beginning to arise.

[Friday, September 16th.]

IMPROVEMENTS IN MINING MACHINERY.

One of the most important lessons taught by the present Mechanics' Fair, is the extensive improvements in mining machinery. This term of course includes machinery used in crushing,amalgamating or concentrating the products of the mines. It requires not the prescience of a prophet, or the calculations of a Newton to foretell the tendency of this great advance and improvement. The immense inducements held out to competent machinists, by the liberality and wealth of the miners of this State, as was to be expected, has resulted in attracting the attention of the first minds in our own country as well as Europe, to the construction of mining machinery. The absolute want of that practical knowledge of the requirements of such machinery, has been well illustrated by the almost countless number of useless articles that have been made to carry out the ideas of, in many cases, master minds in scientific knowledge. Millions of dollars have been expended in manufacturing such useless machinery, and who shall tell the extent of the trials, vexation and positive loss caused by them? How many gold and silver mines have been abandoned as worthless, more through the effects of ill constructed or ill managed machines, than from lack of value of their ores.

But this state of things is rapidly passing away, and a better, brighter day is beginning to dawn upon us already by the improved processes for amalgamating the precious metals. The refuse, "the tailings" as they are termed, of former processes are now worked with more profit than had been the original rock, and it would be stupid to imagine that improvement in this department has reached its climax. There are nearly twenty different machines for amalgamating on exhibition at the Fair, from the little wooden box or barrel with revolving arms to agitate the pulp and water, to the many complicated "pans" which grind the crushed ore while bringing the grains of metal in contact with the mercury. Electricity, steam and every conceivable direction of motion has been applied to to these amalgamators. Some shake, others rotate slowly or with great rapidity.

The last new improvement brought to our notice is of recent introduction, by two French Mechanics, Baux & Guiod. This amalgamator is entirely different in principle to any heretofore introduced, and without wishing or intending to make any invidious distinction, we think it possesses many advantages over all others.

It is at all times a most difficult matter to describe even the most simply constructed machine so that the general reader may comprehend it; of course this difficulty is increased when the machine is more complicated. But believing the principles on which this pan is constructed of great importance, as directing the labors of machinists to a new idea, we shall attempt the difficult task of describing it. This amalgamator consists of a flat bottomed iron pan about four feet in diameter and six inches deep; to this there is a cast iron lid which fits water tight, by means of ridges on both edges, and is kept in position by pins. In the center of the pan is a collar which surrounds the shaft, to which the arms of the mullers are fixed; the collar projects an inch or so above the lid, so that there is no outlet for the pulp and water except between this collar and lid; the crushed rock and water from the grinding machine, to which this amalgamator is attached, and which we shall hereafter describe, flowing in by means of a hopper, the mouth of which is two or three feet above the level of joint of the lid and collar; it follows that by a very simple law of nature, the water containing the ground rock must flow out at that joint, which being at the very top of the pan, by another well known law of nature, only the lightest particles will be held in suspension and flow off with the water. To insure this the mullers are made in a peculiar form, of cast iron, so that the mercury or amalgam is forced to concentrate in the middle of the pan; a simple, but at the same time most effective means for that purpose, being served by these mullers.

Connected with this amalgamator is Fanchery & Genard's Crocodile Quartz Crusher which will crush a ton of rock an hour, sufficiently fine to be put through a very well conceived and effective grinding apparatus. The grinding surfaces being made on the same principle as French burr-stones. There are two of these grinders in each pan—working one over the other. The surfaces are kept in ridges by a very novel plan of making them with alternate bands of cast and wrought iron—the latter wearing quicker than the former causes hollows which insure a rotary motion to the particles of rock—while it frequently happens that on smooth surfaces angular fragments will slide around for a considerable time without grinding. From this grinder the pulp passes as before stated into the new amalgamator. These three machines, forming a most effective quartz mill in all its departments, cost about $1,600, and can all be run to perfection with a six-horse power engine. They altogether occupy a space of 13 feet by 6—make scarcely any noise while working, and require less hands to attend them, as the rock being once fed into the jaws of the crusher passes itself through all the other parts.

We have not written the above as a "puff," but merely to illustrate our subject—the improvements in mining machinery, of which we consider this one of the most important. There are many other valuable inventions on exhibition, which we shall in due time take pleasure in describing, but these French gentlemen's machines are so complete as to show conclusively that quartz crushing and amalgamating, may be carried on without the expenditure of half a million of dollars for machinery which but imperfectly performs its work. We hope our mining friends will give this subject their serious attention, for it well deserves it.

Guns & Pistols.—The most complete assortment of guns, pistols, rifles, and other weapons on Exhibition at the Fair may be seen in the show case belonging to A. J. Platt of 411 Sansome street. In this case may be seen a number of the most elegant, costly and effective weapons in the state, both of home and foreign manufacture. A telescopic rifle, made to order for one of our wealthiest citizens, is a superb weapon elaborately wrought and richly mounted with silver, such a weapon as a common monarch might use with pride. Henry's, Spencer's and Sharp's rifles, a famous "Manton" gun and a pistol that may be loaded and fired with safety, that would be just the thing for Gen. Tom Thumb or Commodore Nutt. The pistol with its bullet mould, wrenches and other tools, all being contained in an elegant case about two inches square.

Trunks & Valises.—Steele & Co., of 222 and 224 Sansome street, exhibit at the Pavilion a very fine assortment of trunks and valises of home manufacture. Everything at their stand has been manufactured in this city. In addition to their extensive home manufacture, Steele & Co., are also the largest importers of goods in their line on the Pacific Coast. Their trunks are imported in a partially finished condition, being packed flat, and put together at their manufactory as above. Their importations are chiefly from New Jersey, and all from the Atlantic States. An experience of five or six years, in this city, has given them a thorough knowledge of the business here, and enables them to meet the public want, in their line, most perfectly.

Buried Treasure.—In taking down an old building in France, recently, the owner discovered beneath a block of granite, a trunk containing gold coins to the value of sixty thousand francs. They were all of the reign of Francis I., and are supposed to have been buried during the religious wars.

CALIFORNIA'S TRIUMPH.

One of the proudest and most interesting reflections connected with the present Industrial Exhibition is the fact that it is so essentially Californian in character; therein differing widely from any previous exhibition on this Coast. Those who witnessed the exhibition four years ago, and who have carefully examined the present one, cannot fail to have noticed this marked distinction—a distinction which most accurately measures the vast strides which California has made in manufactures and arts during the last four years. This growing industry of our people is daily telling upon every individual in the State, and that, more than anything else, is what will eventually raise our State to the proudest position in the glorious galaxy of stars.

Where is the man who can walk through the avenues of our magnificent Temple of Industry, without feeling a glow of pride that he is a Californian. Fourteen years ago, our city was but a hamlet on the slope of a barren sand-hill, and for several years thereafter, every article of ornament or use, every tool or implement for the shop or mine was brought from a distant shore. Even the very houses in which we lived, if of any pretentions to character, were shipped around the Horn. Now, how changed! Our magnificent city is the marvel of the age; the immense palace of industry in its midst is filled to overflowing with the sample products of the workmanship and ingenuity of our home mechanics, ready to enter the lists in competition with the world, in most departments of industry. The genius of our mechanics has given an impetus to mining, unequalled since the introduction of steam and gunpowder to that branch of industry. Their inventions in this line are of world wide use. We have now on exhibition a series of inventions, brought out by Californians within the last three years, which would be a credit to any community on the globe—even the oldest and most populous.

In the number we have eleven amalgamators, and some twenty-five or thirty other important mechanical contrivances for saving labor, all of a highly important and first class character, to say nothing of numerous others for minor, yet still useful purposes. Sacramento has brought us a pump which took the premium at the World's Fair, in London, over three hundred competitors. That city, through the same ingenious inventors, has also just perfected and exhibited for the first time at any Fair, a hydrostatic engine, working upon a principle which the most ingenious mechanics of the Eastern States and Europe have for years vainly been endeavoring to perfect, but without success.

Look at the evidences of our manufacturing progress. See those bales of wool, the like of which our manufacturers have transformed into those beautiful blankets, shawls, broadcloth, cassimere, flannels, etc., which are so profusely displayed near by. Behold yon show of white pyramids of the purest sugar which our San Francisco manufacturers have wrought out from the dark, dirty grains of raw produce of our Island neighbors. Walk around among that gorgeous furniture; rich, elegant, and costly enough for a king's palace. It is the work and handicraft of our mechanics, and made in a city where, fourteen years ago, nothing of the kind, better than a four legged stool was manufactured. Go with us and examine that huge iron monster that with tireless sinews drives with such ease the ponderous and complicated machinery which we see on every side, and reflect that only three months before it was placed in this building, it existed only as "plates" and "pigs" of iron in its simplest metalic form.

But we have no room to further particularize. The scene before us is a grand one, and and one on which we delight to dwell. We know that our readers, who have seen it, rejoice with us, from the bottom of their hearts, at the glory and prestige which it is bringing upon our rising State—a glory more lasting and more glorious than was ever won before the cannon's mouth—a triumph of mind over matter, a subjection of nature to the will and purposes of man.

WIRE WORK.

In these days economy is a great consideration, particularly when blended with utility or ornament. In no branch of our home manufactures is this consideration so closely followed as in the manufacture of articles of wire, a branch of our local industry which has ramified itself through every other trade and calling in the State, till it has assumed proportions that probably not one person in ten thousand have any conception of. The introduction o wire for making rope for suspension bridges rigging for ships, hoisting gear for deep mines, for fences in districts where wood is scarce and costly—these are familiar uses of wire; but then there are thousands of purposes for which this useful substance is used which are both novel, economical and useful. For instance, the collection of articles in this line exhibited by H. T. Graves, at the Mechanics' Fair, including a large, beautifully designed Arbor or Summer House, better adapted than lath work for cultivating those charming creeping plants that so ornament a garden when properly trained, but give it such a slovenly neglected appearance, when not. This house, which has been erected over the Aquarium, near the center of the Pavilion, covers a space of twelve feet in diameter, is sixteen feet high to the crown of the dome, has two doors, and a column at each of the eight angles of which it is formed. The wire in these columns is so arranged that when any creeper would be growing on it, they would assume a round, solid form, the wire being wound in such a manner as to insure this. The pannels between these columns are formed of what is termed "crimped wire," a plan by which at every intersection of the wires each has an indention that holds both in their places without any fastening—making the work stronger, cheaper and better. This quite large building weighs only 450 lbs. Then there are chairs for garden use, neat, light, cheap, but little more costly than ordinary wooden chairs, but which outlast a hundred such for garden purposes; rain nor sunshine having no effect on wire but soon destroying wood.

But perhaps the best and most useful application of wire in the whole exhibition, are the doors and windows, such as may be fitted up to any house, which admitting light and aiding ventilation, exclude the pest of flies. A full sized door, neatly painted, in stout wooden frame, costs but $5 or $6—while a window costs but $2 50; a price so low that we wonder how any person endures the torture of the flies, when they may prevent them at such a trifling cost.

Then there are wire-cloths of all degrees of fineness, from the muslin-like texture of the drum sieves for druggists to sift articles the dust of which it were dangerous to inhale, to the stout crimped screens for sorting copper ores. This process of crimping wire is of great utility in making such sieves. Another somewhat similar improvement is twilling the wire in weaving it; by which it is made more than double as durable as by the usual methods of weaving wire. Both these improvements were invented by Mr. Graves, at his extensive manufactory in this city. To barely mention all the articles in this gentleman's exhibition, would nearly fill our paper. They consist of articles of every conceivable shape and form, from huge traps capable of holding a whole colony of rats, to little sieves for the eyes when the dust is flying. Dummies for milliners, hatters, and clothiers, to display their goods in form; bird cages, neat supports for growing flowers, fenders to guard children and crinoline from the dangers of fire; and everything exhibited, considering its durability, is wonderfully cheap. We specially commend to notice the wire doors and windows as an act of charity to those plagued with flies or mosquitos.

State Fair.—The Board of Agriculture of the State Fair held a meeting in Sacramento on Monday evening, and changed the time for the annual meeting of that institution from the 10th to the 17th of October, in order not to conflict with other Fairs at present being held.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Sept. 17th, 1864.

The market has exhibited a very fair degree of activity this week in leading, as well as in the lower priced shares. A number of prominent stocks have been subjected to a severe pressure from short sellers and others, but are tolerably well sustained at the close. Many speculative shares had been sought for and were largely dealt in at enhanced rates. This latter class of stocks are, for the most part, being regarded with much more favor than formerly. Some of them doubtless possess merit and have been unduly depressed. If the development of even a small portion of these claims, should result favorably, an impulse will be given to nearly all that were once on the market, and they may materially advance. We think a disposition has been shown recently by the public to take hold of these stocks; they cost but little and can be bought in most cases at less than assessments have amounted to.

Legal Tender Notes have been largely dealt in at the Board, advancing from 45½ to 46½, receding to 45½, rallying to 46¾, and declining to 44⅞ last evening, $97,000 were sold.

State Telegraph advanced from $33 to $35 per share. It is supposed that this company have a large surplus balance in their treasury.

California Steam Navigation has been steady at about 60 ₱ cent. (600) per share, at which rate 29 shares were sold. Spring Valley Water Company declined to 3½ ₱ cent. on amount paid in.

Gould & Curry has been active at variable rates and 63 feet were sold, advancing from $1,230 to $1,285, receding to $1,150, seller 30, rallying to $1,200, again declining to $1,150, then advancing to 1,200, closing last evening at $1,135. The 50-horse power engine recently erected in the lower portion of this mine, has been in operation for a week past and is thought to be a complete success. Receipts of Bullion are averaging some $7,000 per day, and the work of exploration still continues in different portions of the claim. The large body of ores 25 feet in depth and about 70 feet in width, directly beneath the 4th level are said to be alone sufficient to enable the Company to declare their regular monthly dividends for some time to come. The treatment of the large amount of tailings on hand at the Company's Mill, has not been as satisfactory as was anticipated, but it is believed that every difficulty can yet be successfully overcome. A number of new tests are to be made.

Savage advanced to $1,300, declined steadily to $1,120, seller 60, then advanced to $1,200, sellers option 60 days, and closed yesterday at $1,230. We can learn of no change in this mine; it continues to look well and is as productive as ever, the regular shipments of Bullion being fully up to the average of the past two months.

Belcher has met with no sale since last week, and is held at about $775. Empire Mill and Mining Company has not been offered recently.

Potosi remains dull and inactive. Small sales were made at $800@$770. The injunction suits of this Company *vs.* the Bajazet and that of the latter against the Potosi, have been before Referee Mesick during the week and may reach a conclusion in a few days.

Chollar has fluctuated but little—declining from $650 to $620 and closing at $650, 60 feet changing hands. The last crushing of 125 tons of ore from the North Mine yielded $51 per ton. The vein in the southwest drift is now some 20 feet in width, from which portion of the claim some 25 tons of good ore are now daily taken. Washoe advices speak favorably of the future of this mine. The affairs of the Company are now well managed and their debt is being rapidly curtailed.

Hale & Norcross was sold at $425, seller 30. The lower drift is progressing satisfactorily. An assessment of $50 per foot was levied on the 13th inst. Yellow Jacket is dull at $400. Ophir is in less favor and fell from $460 to $325 per foot. The Central Shaft is now down 125 feet below the 7th gallery of the Ophir.

Imperial rose from $140 to $143 per share, declined to $137, advanced to $142½ and sold yesterday at 142. 100 shares were sold at these rates. The lower 50 feet level is improving and arrangements have been consummated with other claims to erect the most powerful pumping aparatus in the Territory, which will effectually drain all the mines in Gold Hill proper. The water of Carson River is increasing and the Rock Point Mill is now making about two thirds time.

Sheba has fluctuated materially, declining from $95 to $58, advancing to $80@$85, and held yesterday at $100. The yield of amalgam from the first crushing of about 40 tons of ore in the Company's new Mill amounted to some 1,300 lbs, the value of which is estimated at some $19,000.

Wide West has been exceedingly active and 1,120 shares changed hands, advancing from $32 to $35, then quickly declining to $20, rallying to $24, receding to $20 again rising to $24 and closing last evening at about $26. Some disappointment has been felt at the result of a recent crushing of 20 tons of ore, which yielded about $36 per ton.

Antelope fell from $13 to $12. The former assessment of $10 has been cancelled and $25 levied on the 14th instant in lieu thereof. Real Del Monte was sold yesterday at $17@$18. The Company's Mill is making about half time. Golden Age & Empire has fallen to $5.

Nevada (J. G.) is in much better request and rose from $20 to $34, selling yesterday at $30. A meeting of the Stockholders took place on Wednesday and a special Committee was empowered to investigate the Company's affairs. A favorable report is anticipated as to the prospects of the Company under proper management.

Baltic is also in more favor and advanced from $16 to $28, selling since as low as $17 and then rallying to $24. 125 shares were dealt in. It is rumored that the lode of the Uncle Sam mine has been reached.

Buckeye has revived again and rapidly rose from $3¼ to $6 at which latter rate sales were made yesterday. Burning Moscow is better and 200 shares were sold, advancing from $19 to $29.

North American has been steady at $25. Dancy was sold at $30, but is now offered at $27. De Soto was dealt in at $25@$20.

North Ophir was sold at from $30 to $32; Santa Rosa, at $32; Sierra Nevada, at $21@22½; and Josephine, Coso, at 3½. Bullion rose from $45 to $50, and is now held at $60.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last amount to $334,122.50.

Sales of Mining Shares

For the week previous to Saturday, Aug. 20.

By the San Francisco Stock and Exchange Board.

Saturday, September 10.

Our Patent Agency.

The Patent Agency of the Mining and Scientific Press has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of Letters Patent from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs, Wallace, Allen & Hardyngе. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the Mining and Scientific Press, from January 1st to July 1st, can be procured on application to the office.

Those marked with an asterisk (*) are advertised in this journal.

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—Eds. Press.]

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

[Written for the Mining and Scientific Press.]

THE GREAT DECISION.

Editors Press.—Having survived a close perusal of Report of the Referee in the Gould & Curry and North Potosi case and reserved a synopsis of the same for a few comments, I find myself unable to lay hands upon the latter document and perforce can only attend to the leading and memorized ideas of the reading. Although financially unaffected by the decision, I feel a slight interest in the matter from the ecstatic commendation put forth in its favor, and the seemingly implied faith in the finality of the decree as affecting claims of a similar class with the North Potosi. So before it becomes an oft quoted authority of our courts, and ere the antiquity that clothes maxims and principles of law with the venerable robes of sanctity and trust, has spread its shadows around it, I may be allowed to throw a few words in the way of its Juggernaut-progress.

I would first ask the legal fraternity if ever in the annals of law's intricacies they knew the fate of property of so great a value decided upon the assumptions of so much hollow mockery of knowledge? If ever before weakly supported theories were considered transcendent to the legal requirements of evidence. Against the part that the talented Referee has taken in the premises I shall have little to say, because if a set of grannies should argue before him as to what quality of green cheese constituted the composition of our lunar orb, he might, in order to meet the arbitrary demands for a solution of an unsettled point decide in favor of Napa, A, No. 1; but certainly if actuated by a proper regard for what are generally supposed to be the charities of law, he would turn the evidence and theorists out of doors.

The main questions of the decision were two; first, whether the mass of clay lying between the respectively claimed lodes of the Gould & Curry and North Potosi companies really sustained the character of a wall flanking the west side of a lode claimed by the latter company or belonging entirely to the system of a contended solitary vein of quartz; and secondly whether an almost similarly situated stretch of porphyry constituted a wall rock or merely an intrusion amid the vein-stone? Without a great quantity of facts of a world-wide gleaning and more extended explorations of the Comstock vein, the ready solution of these questions, to an Alexander more anxious to unravel than cut the Cordian knot might seem little promising of a positive conclusion. But, perhaps, what was lacking in quantity was replaced by the quality, for several savans whose superior scientific abilities had pre-illumed what are now some of the darkest eclipses of silver mining, were brought forward to confound each other, and the less favored world, with their penetrative knowledge of quartz veins. The discernment and original observation brought to light it will be useless to detail—suffice the result.

It was decided by the Referee that the mass of clay was not the wall of a distinct lode, and that it was most probably produced by the friction of the porphyry sides of the seam against each other. Fragments of quartz and porphyry in the clay and markings on its sides are claimed to support the latter notion. Just fancy this grinding mill of vertical jaws, with every joint oiled and each part perfectly fitted to its place, the machine set in motion and regulated by the latest revised code of civil practice; and all the while a huge quartz lode with easy partings, delicately crystallized vein-stone and friable masses of ore remaining unscathed within a few yards of the ponderous grinders. When the next movement takes place may our savans and referees be there to furnish us with the full particulars. Why should there be any danger when the imp of the internal fires can conduct his convulsive operations so carefully and with such a nice discrimination as to anticipate the deep affinity of lawyers with all his works by preserving that now well knawed bone of contention—the Comstock lode. Of course it was not possible for the chemical or mechanical action of water to transpose the ingredients of the porphyry, of which clay forms more than one third the bulk and quartz another portion, not at any rate while lawyers take as naturally to fire as ducks do to water.

This decision also brands the intrusive or separating mass of rock as a "horse," a real Trojan deception introduced to allow of the sacking of the best quartz by other than the real owners. This portion of the decision rests upon the conjuction, at one or two points, of the otherwise separated lines of quartz. A learned gentleman from the East, whose scientific reports, from their proficiency in the simple rules of arithmetic, have astonished our native quartz miners and stock dealers, testified that the "horse" presented just such an appearance as would be given by a mass of porphyry falling into quartz in a fluid condition. It is our misfortune that the gentleman did not explain whether he had seen a parallel occurrence, or had merely ciphered it out.

As most veins are somewhere intersected in the line of their course, and according to igneous theory of the origin of quartz veins all such lines of matter must be connected with an inner depository, therefore, by the latest legal decision, all intervening masses of rock must be "horses," and the foundation of the world made up of hobbies which men are riding to their own aggrandizement. That is a huge "horse" separating the Comstock lode of Washoe from the Veta Madre of Mexico; so large that over it many a "mining" elephant may stretch its monstrous bulk. What a grand speculation it will be for some "Grooch Co." to purchase the interest of the owners of the first discovered quartz vein, and then charge upon the menagerie of stocks with a jubilant "Tally Ho!" or else submit their case to a referee.

In conclusion, I will suggest that in view of the liberal notions of evidence creeping into the mouldy chambers of the law, that hereafter the works of Andrew Jackson Davis, Munchausen, and all spiritualists should be accepted as standard law books. Pundit.

[Written for the Mining and Scientific Press.]

NEW YORK CORRESPONDENCE.

BY FRANK WANDELL.

New York, Aug. 10, 1864.

Editor of Mining Press.—I am on hand with another budget of news fresh from the Empire City. I doubt not but it may prove highly interesting to your numerous readers, and more especially to those who hail from this city. There is not much news stirring at the present writing, and most of the gossipers are out of town, enjoying the country air. The war news is as plentiful as ever, and quite as contradictory. One day a battle is reported in our favor, and the next day it is contradicted, and so it goes. It reminds me of the telegraphic dispatches which we used to receive in California; but I suppose the people do not go in such ecstacy over them as they formerly did, at least till they are confirmed. As to the state of

THE MARKET.

There has been more of a steady feeling in the Money Market, during the past week. Stocks, as a general thing, have shown more activity, and brokers of course feel in better spirits. Rail-road stocks have been the principal feature on the stock list. A large amount of shares having changed hands at greatly improved rates. Mining stocks continue rather dull, the fever for speculation seeming to run in another channel. There are any quantity of our Montgomery street operators here, "laying back on their oars," waiting for a favorable opportunity to place their wonderful and marvelously rich discoveries before a New York public. The time is anything but favorable for "showing them up" at present. I noticed among the passenger lists, that the president of the Pacific Board of Brokers had arrived here, but I have not as yet seen him. I hear that he comes on simply for the trip with the hope of improving his health. Such may be the case, although it looks very suspicious, during these times when so many are arriving, heavily laden with "feet" of all grades, from one bit to $100 per share.

Solon Cattie of Real Del Monte notoriety, who was formerly their secretary—the young man with a silent tongue, has also arrived. I suppose now that he has "raised a stake" by selling out what he held in that "famous bilk," for be it known he sold out at the right time, having had the "inside track." He can thus well afford to make a show, and splurge at our different watering places, this season. Wh wouldn't be a secretary and in league with the trustees, when there is a "good make" on hand? Don't all speak at once.

The Board of Directors of the Erie Railroad Company have passed resolutions of profound regret for the decease of their late president, Mr. N. Marsh, and have marked their respect for his services and memory by a record of the particulars of his long official connection with the road, from 1845 to the day of his death.

Prices continue extremely high, and what is more, they seem to increase instead of decrease. What poor people will do for provisions, clothing, etc., is somewhat of a problem to solve. It is to be hoped that this high price evil may be remedied soon, or the consequences arising from among the lower classes, will be very serious ones. Business is not very brisk, still there was a little more doing and a better feeling manifested towards the close of the week. Gold has of course been (as it always is) the chief feature of the Stock Board. It has taken its usual flights, during the week, and closed firm at 255—probably by the time you receive this it will be much below this quotation. I know bets to have been made that gold would reach 300 before the 1st of October—of course this is only mere prophecy.

EMIGRATION.

The number of emigrants arriving at this port, according to the latest returns, is at the the rate of 4,271 a week, or about 220,000 a year. Possibly, the gross emigration of the year will be something under this, but it is safe to reckon it at 200,000.

MOSES TAYLOR DECLINED.

I was in hopes that my much esteemed favorite, Mr. Moses Taylor, who had tendered to him the high and responsible position of Assistant United States Treasurer, at New York, *vice* Mr. Cisco, resigned on account of ill health, would accept of the same; but he has written a letter to the Department in Washington, declining the office, stating that he could not attend to the duties thereof, with advantage to the Government, on account of his own business, which necessarily occupied most of his time. It is a general regret by the business men of New York, that he was not able to accept of the position.

A HEAVY CONTRACTOR CAUGHT.

A man is now on trial before the Military Commission, at Washington, charged with contracting to furnish the rebel government with forty *millions* of dollars worth of goods, the contracts for which, signed by the rebel authorities, were found upon his person. It appears from the terms of the contract that the goods were to be purchased in the North, shipped to Nassau or Havana, whence they were to be transhipped to rebel ports, by blockade runners, and the payment therefor to be returned in cotton, by the same channel. It may well be said that this individual was doing the thing in rather an extensive way.

THE WEATHER.

The weather is very warm, and everything seems dried and parched. Rain is much wanted in the country. The little which fell a few days ago, did not do much good. If this drought continues, and failing of the crops ensues, it will prove a sad calamity indeed, and where prices would go to, is hard to conceive.

THE THEATERS AND ICE CREAM SALOONS.

The different places of amusement are doing a pretty fair business, taking into consideration the extremely warm nights; for a great many never visit them during the heated term. The ice cream saloons are doing the principal business. They are crowded night and day, and in many instances you have to wait to attain a seat, and that is saying considerable for a large city like this, with her hundreds of such places of refreshment.

THE LATEST NOVELTY.

The latest novelty, in London and Paris, is the Photograph Letter signature. Note and letter sheets are now gotten up with miniature oval photographs, of the person using them, affixed in the right hand lower corner of the last page, after the words "Very truly yours," which are printed in the usual place. They are getting to be quite as fashionable as the "*cartes de visite.*"

You will probably consider this quite a lengthy epistle, for such excessively warm weather as we are now experiencing, so with your permision, I will withdraw. *Au revoir.*

All Right and Tight.—Water was pumped into the hull of the Camanche on Sunday last, when she was found very tightly rivited and calked. A few unimportant leaks only were found, which are now being secured. Visitors to the city at this time should by all means take a look at this ship; she will be found in reality the greatest curiosity on the coast. Those visiting her will not fail to get the value for their money, besides adding to the fund for the wounded soldiers.

Rich.—The Blue Gravel Gold Mining Company, on Sucker Flat, Yuba County, made their fourth clean-up a few days since, after a thirty-one day's run. They realized the handsome sum of $52.000. The aggregate of the four washings has been $110,000. May their prosperity continue and increase.

Raising the Washoe.—Arrangements are in good state of forwardness for raising the Washoe. Chains have been passed under her bull, and fastened to barges along side. She will probably be raised sufficiently to be pumped out by to-morrow or next day, when she will be immediately towed down to this city for repairs.

The Iron Worker---Dignity of Labor.

The history of iron is the theory of civilization. The rough, shapeless ore that lies hidden in the earth folds in its unlovely bosom such a fate and fortune as the haughtier sheen of silver, gleam of gold, and sparkle of diamonds may illustrate, but is wholly impotent to create. Rising from his undisturbed repose of ages, the giant, unwieldy, swart, and huge of limb, bends slowly his brawny neck to the yoke of man, and at his bidding becomes a nimble servitor to do his will. Subtle as thought, rejoicing in power, no touch is too delicate for his perception, no service too mighty for his strength. Tales of fairy feats of magic, pale before the simple story of his deeds the facts of which they but faintly shadow forth. And waiting upon his transformation, a tribe becomes a nation, a race of savages rise up philosophers, artists and gentlemen.

Commerce, science, warfare, have their progress and their vicissitudes; but underneath them all, unnoted, it may be, or treated to a superficial and perhaps a supercilious glance, yet mainspring and regulator of all, runs by an iron thread, true thread of Fate, coiling around the limbs of man, and impeding all progress, till he shall have untwisted its Gordian knot, but bidding him forward from strength to strength with each successive release. No romance of court or camps surpass the romance of the forge. A blacksmith at the anvil seems to us a respectable, but not an eminently heroic person; yet, walking backward along the past by the light which he strikes from the glowing metal beneath his hand, we shall fancy ourselves to be walking in the true heroic age. Kings and warriors have brandished their swords right royally, and such splendor has flashed from Excalibur and Morglay that our dazzled eyes have scarcely discerned the brawny smith who not only stood in the twilight of the background and fashioned with skillful hand the blade which radiates such light, but passed through all the land, changing huts into houses, houses into homes, and transforming into a garden by his skill the wilderness which had been rescued by the sword. Vigorous brains, clear eyes, sturdy arms have wrought out, not without blood, victories more potent, more permanent, more heroic, than those of the battle-field.

Lack of ambition is not an American fault, but is too often an ambition that regards irrelevant and factitious honors rather than those to which it may laudably aspire. A mechanic should find in the excellence of his mechanism a greater reward and satisfaction than in the wearing of a badge of office which any filth rate lawyer or broken-down-man-of-business with influential friends may obtain, and whose petty duties they may discharge quite as well as the first-rate mechanic. The mechanic who is master of his calling need yield to none.—We would not have him like the ironmongers denounced by the old religious writer as "heathenish in their manners, puffed up with pride, and inflated with worldly prosperity"; but we would have him mindful of his true dignity. In the importance of the results which he achieves, in the magnitude of the honors he may win, in the genius he may employ and the skill he may attain, no profession or occupation presents a more inviting field than his; but it will yield fruits only to the good husbandman. Science and art give up their treasures only to him who is capable of enthusiasm and devotion. He alone who magnifies his office makes it honorable—Whether he work in marble, canvas, or iron, the man who is content simply to follow his occupation, and is not possessed by it, may be an artificer, but will not be an artist, nor ever wear the laurel on his brow. He should be so enamored of his calling as to court it for its own charms.

Invention is a capricious mistress, and does not always bestow her favors on the most worthy. Men not a few have died in poverty, and left a golden harvest to their successors; yet the race is often enough to the swift, and the battle to the strong, to justify men in striving after strength and swiftness, as well for the guerdon which they bring as for the jubilant consciousness which they impart. And this, at least, is sure; though may, by some rare mischance, be overlooked, demerit has no opportunity whatever to gain distinction. Sleight of hand cannot long pass muster for skill of hand. Unswerving integrity, unimpeachable sincerity, is the lesson constantly taught by the lives of these renowned mechanics. "The great secret," says one, "is to have the courage to be honest,—a spirit to purchase the best material, and the means and disposition to do justice to it in the manufacture." Another, remonstrated with for his high charges, which were declared to be six times more than the price his employers had before been paying for the same articles, could safely say. "That may be, but mine are more than six times better." A master of his profession is master of his employers.

Six thousand votes were polled in Storey county at the recent election.

THE HAMMER.

The following beautiful "waif," illustrating the power and magic of the most common implement of the mechanic will well repay a perusal, and will be read with peculiar interest while viewing the immense museum of industry now attracting to its precincts such crowds of our citizens :—

The hammer is the emblem of mechanics. With it are alike forged the sword of contention and the plow-share of peaceful agriculture, the press of the free and the shackle of the slave. The eloquence of the forum has moved the armies of Greece and Rome to a thousand battle fields, but the eloquence of the hammer has covered those fields with victory or defeat. The inspiration of song has kindled up high hopes and noble aspirations in the bosoms of brave knights and gentle dames, but the inspiration of the hammer has strewn the field with the tattered helm and shield, deciding not only the fate of chivalric combat, but the fate of thrones, crowns and kingdoms. The forging of a thunderbolt was ascribed by the Greeks as the highest act of Jove's omnipotence, and their mythology beautifully ascribes to one of their gods the task of presiding at the labors of the forge. In ancient warfare the hammer was a powerful weapon, independent of the blade which it formed. Many a stout skull was broken through the cap and helm by a blow of Vulcan's weapon. The armies of the Crescent would have subdued Europe to the sway of Mahomet, but on the plains of France their progress was arrested, and the brave and simple warrior who saved Christendom from the sway of the Musselman, was named Martel—'the hammer.' How simple, how appropriate, how grand—'the hammer.' The hammer, the saviour and bulwark of of Christendom. The hammer is the wealth of nations. By it are forged the ponderous engine and the tiny needle. It is an instrument of the savage and the civilized. Its merry clink points out the abodes of industry—it is a domestic deity presiding over the grandeur of the most wealthy and ambitious, as well as the most humble and impoverished. Not a stick is shaped, not a house is raised, a ship floats, or carriage rolls, a wheel spins, an engine moves, a press speaks, a viol sings, a spade delves, or a flag waves without the hammer. Without it civilization would be unknown, and the human species would become as defenceless as the brutes that perish ; but in skillful hands, directed by wisdom, it is an instrument of power, of greatness and true glory.

China at the Fair.—We now and then notice two or three "Celestials," moving leisurely about the Pavilion, and examining with much apparent interest the curious, ornamental and useful handicraft of the "outside barbarians," spread out there in such prodigious profusion. Some of our Chinese friends evidently take considerable interest in the Exhibition. Chy Lung & Co, 642 Sacramento street, have in the Pavilion the image of a huge monster, pretending to represent a Chinese lion, carved with characteristic exaggeration, and painted with a horrible deviltry, all lovely to Chinese eyes, but so disgusting to Christian view, we generally feel like giving it a wide berth when passing its locality. Nestled on the back of this queer looking object is a quantity of Chinese cotton also on exhibition, and near by, a show case well filled with neat and tasty articles of Chinese manufacture and art. Among them we notice several very pretty paintings on rice paper, carved boxes of various descriptions, elaborately wrought caskets, besides fans and other fancy articles. The Sanitary fund is not forgotten by this Celestial exhibitor, as he has donated for that object a curious and elaborately wrought Chinese lantern, and placed in the pagoda, on exhibition for the benefit of the fund, a Chinese temple in miniature, a rare and queer specimen of oriental ingenuity.

Live for Something.—Thousands of men, breathe, move, and live, pass off the stage of life, and are heard of no more. Why? They did not a particle of good in the world, and none were blest by them ; none could point to them as an instrument to their happiness ; not a line they wrote, not a word they spoke, could be recalled, and so they persisted ; their light went out in darkness, and they were not remembered more than insects of yesterday. Will you thus live and die? Live for something. Do good, and leave behind you a monument of virtue that the storms of time can never destroy.

Atwood's Self-Regulating Windmill.—In California, particularly in the agricultural districts, where irrigation is found the great essential towards the production of crops, where dependence must be placed chiefly upon windmills, a cheap and reliable motive power is a most important desideratum. Fortunately we are never without one of nature's cheapest and most universal powers—the wind. Ordinary windmills do not answer the purpose. They are too unreliable, and beyond the reach of ready control. The genius of our inventors, however, has not failed us in this particular, and among other inventions to aid the farmer, and to correct this fault, we have "Atwood's Self-Regulating Windmill," which most admirably answers the purpose desired, in supplying a cheap and uniform power for irrigating fields or for other uses requiring a limited amount of power. This windmill is a perfect self-regulator, and is capable of being adjusted to any desirable speed. It is so simple that any person, not a mechanic, can keep it in order. One of these mills is on exhibition in the lot on which the Pavilion stands—the only one there. The proprietor will take pleasure in showing to any one interested, the principle on which it works, which is quite new and ingenious. Visitors at the Fair, who may desire to procure some such cheap power, for irrigating gardens, ranches, or for other purposes, would do well to give Mr. Atwood a call.

A Curious Gift for a Minister.—Main & Winchester, among their articles on exhibition at the Fair, have an enormous long whip of great weight and thickness, which has been marked as being a "Pike county revolver," made expressly for Rev. Dr. Bellows, President of the Sanitary Commission. A rather curious article to give to a minister. The Doctor could crack a joke much easier than he could that ponderous whip, and he can hurt the rebels worse with his tongue than with such a weapon, which would require a giant to wield it.

Patronize Home Manufacures.—The Tehama Trunk Manufactory, James Longshore, proprietor, 307 Sansome street, exhibits a fine assortment of trunks, valises, etc. These articles are entirely of home manufacture, and one of the trunks is a most superb specimen, silver plate mounted and fastened. The stitching and finishing work, both inside and out, is done in a very superior manner. This trunk is valued at $300. He also exhibits a number of rocking horses, which are very much admired by the little folks.

Tay, Brooks & Backus exhibit a case of tin and Japan ware which, for elegance and taste of finish, cannot probably be excelled by any manufactory on the continent. Every article in this splendid case, which may be seen in the upper part of the pavilion, has been made at their establishment in this city, including the elegant copper urn, which is pronounced by all visitors to be an imported article. The Japan work is executed by an experienced artist in their employ. There are but six or seven experts at this business in the United States. The large Monitor cooking stove and fixtures, near by, was also manufactured by this firm, and is, so far as we can learn, the only description of cooking stove manufactured on this coast.

The Pacific Mail Steamer, Sacramento, sailed on Monday with 215 passengers for Panama, and $825,334 in treasure. The prices of passage were the same as before, to wit: Outside and ladies' saloon, $264 ; inside cabin, $238 ; second cabin, $184.35 ; steerage, $130.50.

The Camanche begins to assume quite a warlike appearance. The riviting of the hull is now fully completed, and all parts of the work are being vigorously pushed forward. The receipts at the gate for the Sanitary Fund, average about $45 on week days, and some $200 on Sundays.

A Bell cast in Sheffield (England,) weighing 1,500 pounds, has been hung in the Gold Hill N. T. Catholic Church.

An Important Invention.—Henricksen's Patent Chimney Top, a combination of the ventilator and consumer of smoke, is one of the most important inventions on exhibition at the Mechanics' Fair; as owing to its peculiar effects on the drafts of chimneys and smoke stacks, it aids combustion while increasing the amount of air in a most remarkable manner. The flue of the engine employed to drive the heavy machinery at the Fair has one of these invaluable inventions attached, where its appearance and properties may be examined. The engineer in charge of this engine informs us that until this top was fixed on the flue, it was almost impossible to keep a full head of steam, though the boilers and furnace were at an intense heat. But as soon as it was placed in position, though, the furnace was so cool that he could open it with his hand, and the quantity of fuel used was not more than half as much as it had been before, he found no difficulty in keeping up steam at a remarkably even pressure. A great many of these machines are used by brewers, foundries and steamboat owners, and all speak in the highest praise of them. Like all useful inventions, this is but a new application of a very old principle; one of nature's own laws. But Mr. Henricksen is entitled to the credit of first applying it. The great object gained by this invention—the consumption of smoke, will be of immense benefit to the people of this coast, by enabling them to use the peculiar kind of coal found here without the annoyance of the smoke it generates, when used with ordinary chimneys. J. E. Ferguson, 28 Third street, is the manufacturer of these chimney tops, where those interested may obtain every information concerning them.

Billiard Tables.—California is a wonderful patron of the billiard table. This game, in connection with chess, is looked upon by many as a great helper to mental attainments. Both require an active exercise of the mind, while billiards involve a small amount of physical exertion as well as philosophical calculation ; hence, the attention which is bestowed upon them in this State. Billiard tables are now being quite generally introduced into private residences among the wealthy, where they are made to accomplish their legitimate purpose. No city in the world, in proportion to its population, buys so many as San Francisco, and no where can we find more perfect or elegant ones than here. It is a source of much gratification that the chief portion of the tables now sold in this city are manufactured here by our own mechanics. Those who are interested in such things should go to the Pavilion and take a look at the splendid tables on exhibition there by Strahle, and see if there is any necessity for going abroad to purchase such luxuries. Mr. P. Liesenfield, who has taken two diplomas, also exhibits a table of his own manufacture. Jean Drouilhat, to whom the Mechanics' Institute awarded a diploma in 1860, exhibits a very elegant table finished in imitation of rosewood. M. M. Hughes also exhibits an elegant French carom table with Phelan's improved cushions.

Another Break Down.—About the same time with the occurrence of the above accident, Moore's Improved Howell's Rotary Crusher, which has been in progress of erection for several days, near the steam engine, was started up, for the first time in the Pavilion. It had, however, scarcely got into operation before the side walls of the machine were suddenly burst out, throwing off several large fragments of iron, one of which struck a gentleman standing near, upon the head, but fortunately without much force, and inflicting but a slight injury. We are informed by one party that the accident was occasioned by feeding too large a piece of quartz into the machine, while another informs us that it was the result of a hammer being dropped into it by the feeder. Either might have caused the accident.

A large number of miners are locating in the vicinity of Folsom, waiting for the Natoma Ditch Company to let in the water in their enlarged ditch. The *Telegraph* predicts that mining will be carried on more extensively this winter than for a number of years past.

A Freak of Nature.—Probably every visitor to the Fair has noticed the extraordinary bunch of pears, 59 in number, which were grown on a single stem of but eight inches in length, and some facts in connection with this unique work of nature, may not be uninteresting to the readers of the Press. This bunch of pears, weighing, when plucked from the tree, just 19 pounds, was grown on a tree in the famous Briggs' orchard, at Marysville ; it is of the Louise Bonne d'Jersey variety, which does not usually cluster while growing. Mr. Briggs' theory regarding the growth of this most extraordinary cluster, is that early in the spring, soon after the blossoms had set, and while the sap of the tree was in exceeding abundance, a slight frost killed nearly all the blossoms on it except those that produced this bunch, which were sheltered by a mass of foliage ; that as the tree continued to grow, the sap, which was quite sufficient to have supplied an ordinary crop, was concentrated in this one bunch, every pear on which is larger than usual with the variety. This theory appears to be well founded, for the tree, which is nine years old, never produced its fruit in a cluster before. None of the other trees in the orchard, of the same variety, made the slightest attempt to imitate this monstrosity. Mr. Briggs has had a photograph taken of this bunch of fruit, which, on the first glance, presents the appearance of a large bunch of grapes. An offer of $500 is made for the production of a similar bunch, with little danger of a taker, we think. The like has never before been seen, and probably never will be again.

Break Down.—While the people were standing around the Hydrostatic Engine, in the Pavilion, last evening, some one in attempting to carry a leading water hose through the crowd, created such a disturbance as to throw several persons off their balance ; one of whom, in attempting to save himself from falling, caught hold of the cam rod, by the handle, and lifted it out of its seat. The consequence was, the engine having no regulator, started off with a jump, and with such violence as to tear the driving shaft from its place, breaking the massive iron bed-plate in two, and turning the broken piece up on end. The bed-plate where it broke, measured about twelve square inches of cast iron. Fortunately no one was hurt. The tremendous force displayed in this break down, affords another evidence of the great power exerted by this machine. We understand that the engine will be put in running order again to-day, and extra precautions taken to guard against the recurrence of such an accident.

California Made Gold Pens.—Mr. W. B. J. Kenney, corner of Montgomery and Sacramento streets, exhibits at the Pavilion, a case of gold pens of his manufacture. Mr. K. has been a practical gold pen maker since 1837. These pens are used and approved of by great numbers of bankers, book-keepers, clerks, etc., who prefer them to the best imported article. They are now in almost universal use in all the leading mercantile and banking firms in this city. Try them.

The Heaviest Taxed Article in the Country.—It may not be generally known that lucifer matches are taxed more in proportion to their value than any other article manufactured in the United States. The new Revenue Law requires a stamp of one cent to be attached to every single box or package of these matches, which stamp is fully as much as the wholesale value of the article itself, an amount of taxation we believe no other article has imposed on it.

The Reese River *Reveille* says that a crime similar to sluice robbing in California, is rapidly coming in vogue in that neighborhood, and that is, the stealing of ores from the dump piles and inclines of the mines.

The San Francisco Branch Mint Superintendent has given notice that a tax of one half of one per cent. will be collected hereafter on all deposits of gold and silver bullion, in compliance with the Internal Revenue Act, approved June 30.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:
Saturday Morning, Sept. 17, 1864.

HOME FINANCES.

Monetary affairs have assumed no new phase this week, and the supply of capital for loan purposes is as abundant as ever. In view of the blighting effects of the early drought throughout the agricultural and placer mining districts of the interior, together with the almost universal collapse to the stock market, which recently overwhelmed so many dealers, it is a subject of some remark in financial circles that the money market is no less stringent than it was at this time last year, when the prosperity of all classes both here and in the country was thought to be equal to that of any preceding year in the history of the State. It would be idle to deny that a portion of the available means of many in this community has been lost through the inability of parties in the country to cancel indebtness due this city; while the losses upon the speculative arena of the stock exchange has been wide spread and severely felt in some quarters; and yet the money market has continued in substantially the same condition for months past, and good short paper passes readily in bank at 1½ per cent. per month. Loans upon mining stock collateral, are negotiable at the same rate, if the margin from current market value is made sufficiently large. Outside loans are effected at higher figures and are governed by the character of the security offered.

Eastern Exchange for the last steamer, was sold at 115 and 120 premium on gold for currency bills. Telegraphic transfers was current at former rates 5½ per cent. premium, and drafts payable in coin at 3½. The shipment of treasure was smaller than for sometime past, owing to there being no connecting steamer at Panama for Europe upon the arrival of the steamer from this side.

Legal Tender Notes have been largely dealt in this week, advancing from 45 to 46¾ and 47, at which rates some $100,000 were sold at the first Board of Brokers.

Gold declined on the 12th inst. in New York to 212, rose to 219 at the close of that day, and since then has closed at about 228.

"IF IGNORANCE BE BLISS, 'TWERE FOLLY TO BE WISE."—We thought of these words as we saw a number of beautiful young girls—perfect buds of beauty—of the sweet ages of from 15 to 18, who were collected around the strings of silk worm's cocoons on exhibition at the Fair. One "fair young thing," said they were dried fruits, but she did not know exactly of what kind, another said they were pea-nuts with the meats taken out, while a third declared them to be cotton seeds, as she could see the cotton round them, not one among them all appeared to know that there wrs such a thing as a silk worm, though most of them were dressed in the product of that insect's labor. The dear creatures were more happy and blissful in their ignorance than ever was sage or philosopher in his knowledge. If ignorance be such bliss' thought we, what folly it is to be wise.

It is reported that the Russian fleet in the Pacific had been ordered to rendezvous at Acapulco and salute the Mexican flag.

EASTERN FINANCES.

The absence of overland mail communication from the East, and the late arrival of the Panama steamer deprive us of later commercial advices than were received last week. A more careful review of Eastern exchanges leads to the conclusion that there are a number of causes at work in New York and other leading cities East, favorably influencing the condition of the money market and the fiscal measures of the government. The large disbursements of the government and the continued issue of six per cent. compound interest notes was tending to increase the volume of the currency and was facilitating the movements of capital, notwithstanding that a large amount of the legal tender fives of February and March were being withdrawn from circulation. There had been large orders from abroad for the 5:20 Bonds, and a rapid advance took place. An unprofitable and absurd rage for hoarding greenbacks had ceased, and this was enlarging the current of the circulation.

Gold had found a lodgment in the descending scale and as the telegraph has since advised us, has continued to decline.

The aspect of the military situation was becoming more hopeful, and business was reviving in many departments of trade.

Foreign Exchange, for gold, was below par, and it was difficult to sell sterling at 108½, at which rate a flow of specie from abroad was looked for. Money was abundant on Wall street at 6 @ 7 per cent. per annum, and lower rates were expected at an early day.

THE HUMAN VOICE, if very strong and sharp will crack a drinking glass. One evening, at a party at the London Coffee-house, Ludgate Hill, Mr. Broadhurst, the well-known tenor, by singing a high note, caused a wine glass on the table to break, the bowl being separated from the stem!

Alphabetical List
OF THE
NAMES OF EXHIBITORS AND ARTICLES
AT THE
Mechanics' Fair.

[The list will be made complete in our next issue.]

Anaheim, U—Three and one-half dozen California wine, and one-half dozen California brandy.
Appleton & Co., D. E., a case of cutlery.
Armes & Dallum, twelve dozen pails, three nests tubs, etc.
Atkinson, J—The model of a locomotive grate.
Atkinson, Mrs. S.—6 frames leather work.
Avery, E., a knit quilt; two quilts with figures of mariner's compass.
Authony, M.,
Alvarado, Miss Delfina, a picture in worsted, and a sofa cushion.
Aitken & Co., a marble center-table.
Adams, Dr., a case of zephyr worsted work, and a case of dentistry work.
Arnold, Fortunatus, three paintings in oil.
Adolph & Son, a case of imported tobacco pipes.
Allen, W, two specimens of scroll sawing.
Ayres, Dr W O, two cases of borax, refined and unrefined, from Lake county.
Adams, J Q, three pictures in pencil and water colors.
Abbott, C. L., a frame shell of moss-work.
Ames, Miss, a card of lace specimens.
Aram, W., two bottles white wine
Arthur & Son, J D., a reaper combined (Seymour & Morgan invention,) a model giant reaper, four cast steel plows, a pair of large elk horns, and a pair of small deer horns.
Andrews, C., a lot of furniture,
Asker, H., a robe made of guanaco skins, made by the Patagonian Indians, at the Falkland Islands.

Barrell, L. J.—Three bottles of California wine.
B. A. S., Mrs. a frame of ornamental needle-work.
Bertrand, R., one lady's skirt.
Belle, Dr., an apparatus for extracting teeth without pain.
Baxter, W. S., two crayon drawings
Bishop & Chalmers, a Scotch newspaper of 1707.
Beckford, D. R., three jars of eye-water and frame.
Blake & Co.—Two cases of military goods.
Bosqui & Co.—Samples of bookbinding and stock used in trade.
Brooks, R. F.—A case of hair-dyes and perfumery.
Baxter, W. H.—A patent churn.
Buswell & Co.—A show case containing specimens of bookbinding.
Brown, J. D., model boat (plunger).
Bausman W., two books, the first issued from the California press.
Bernhardt, B., needle work, framed.
Benoit, G., 1 daylight reflector.
Barker, J. B., the model of an excavating machine for ditches and levees.
Benoist, G., two samples of kerosene oil and three of crude.
Byrne & Castres one case Saleratus bitters.
Bewley, Mrs. M. L., an embroidered shawl pin.
Bell, Miss, two pictures in water colors.
Bunnell, G. F.—A case of dentistry.
Bartou Bros.—Two sacks of Carmen Island salt, and three selected samples of the same.
Brown, H. W.—A book of indigenous plants and flowers.
Barnes, C. A.—A child's embroidered dress, and two bottles of raspberry wine.
Bennett, Mrs. W—A parcel of fancy needle-work, chair covers—six pieces.
Barkhardt, G—A case of boots.
Bunner, Mrs.—One case preserved fruit.
Beebe & Lynda, Sacramento—A challenge washing machine.
Blum, J.—A specimen of penmanship.
Bayer, Mrs., Sacramento—A lot of bead, worsted and net work.
Blaisdell, S. F., San Francisco—Caloric engine, Roper's patent; four rotary pumps, invented by Stannard.
Barra, E. I., a small frame containing a piece of granite from Plymouth Rock.
Barnes, Mrs. C. A., a wine glass taken from the ship from which the tea was tossed overboard in Boston harbor, in 17—; also, a pewter tea pot, one hundred years old.
Bartling & Kimball, one ledger (blank book manufactory), two bibles, (to display binding).
Bell, E., a show case of anatomical instruments.
Brodie, J., the model of a patent amalgamator.
Bach, John, a show case of sportsmen's articles.
Bernhard & Wolf, a couple of shells.
Brooks & Co., C. W., two bags coffee; three kegs sugar; two kegs Metcalf; one barrel rice; one bale pulu; three boxes tapioca; five packages tobacco and cigars.
Brown, Mrs. E., an oil painting.
Brackett, M. s. E. M., a frame of crayon portraits.
Burrage, Mrs Aurelia, one pencil picture, a toy set of worsted furniture.
Bafter, Master F S, three framed specimens of penmanship.
Blasser, Mrs Adele, a crochet collar.
Brown, Mrs, one crayon fruit piece.
Burgess, H, six guides for cutting lead pencils, system of drawing in three numbers, system of penmanship in ten numbers, and one pencil drawing.
Brickwell, Mrs, a patch-work quilt.
Bien, Joseph, a combination lock.
Bacon, Louis, a plaster of Paris monument.
Brignardello & Bros., ten pieces of marble statuary.
Brown, Wm., three covered buggies.
Brooks, E C, a patent buggy.
Bessemer, H L, a case of cosmetic hair-oil; tooth powder and pomade.
Bibb, Robert, the model of a ship.
B. L. Solomon & Sons, a case of upholstery goods.
Baldwin, Miss L C, a case of hair jewelry.
Brignardello & Co, two boxes of San Francisco made macaroni.
Brydges, M C, four chimney tops; two ventilators and dampers.
B. P. Moore & Co., one lot walnut parlor and oak library furniture, reception chairs, wardrobes, inlaid marble tables, and school desk and chair.
Brayton, A. P., a "Peacemaker" stove, and a field coal burner.
Beth, J. M. a reducer and amalgamator.
Beale, Thos., one oil painting.
Behrens, Br., a tiger-skin buggy robe.
Berney, W, a patent circular saw filing machine.
B H Freeman & Co., a rosewood vase.
Burgess, H, a specimen of penmansbip, a pencil drawing, slate pencil sharpener.
Burgess, G. H., five water color pictures.
Bath & Morrison, a butcher cart
Brown, Mrs. H. S., a specimen of needle work.
Barbaries, Felix, a patent feathering paddle.
Brown, Miss B, a frame of needle-work.
Breidenstein, L, a show case containing fancy boxes.
Bower, G., one model fire-upsetter.
Barra, G. J., a half dozen blackberry cordial.
Brannan, Isaac, two bottles white wine.
Barnard, Charles, a giant loaf of bread.
Bragg, Robert, a test gag plank.
Brannan D., fifty-three pieces terra cotta ware and pottery, from San Antonio.
Bali, J. M., four specimens of wharf piles, perforated by the toredo.
Burke, J. E., a map and crayon sketch.
Brian, C. S., two packages of needle work.
Bryant & Strahan, a piece of carving in wood.
Burrows, G., an air pump (Richie's, of Mass.,) a telescope, from Pennsylvania, belonging to City College.
Brader, Louis, a sample of worsted work.
Brewer, W. B., a lot of canned fruit.
Bush, Norton, six oil landscape paintings.
Bateman, H. C., four specimens of book binding.
Brooks, S. M., fourteen frames of oil paintings and a bust.

Cutting & Co., Messrs., a stand containing samples of pickles, pie fruit, jams, jellies, ketchups, etc.
Congdon, G., three specimens gold and silver ore from Melones and Stanislaus Mining Co., Calaveras county.
Cavan, G., a ship joiner's banner.
Comfort, M., two vases of lilies in wax.
Calvert, Dr, a case of manufactured teeth and cerundum wheels.
Comfort, M. D., a boquet of wax flowers.
City College, a pencil drawing.
Copeland, W. W., a vase of wax flowers.
Cleary, Mrs, three specimens of preserved flowers.
Collins, D, an engraving.
Carduff, Miles, five oil on paintings.
Chase, G. W.—Six bottles of California horse-radish.
Churchill, J. H.—A coal oil test; stearic acid crystals, (new process;) bitumen in glass (new process).
Carlos, G.— hree saddles.
California State Telegraphic Company, fifteen telegraph instruments and telegraphic apparatus made by W. Lundberg.
Curtis, Mrs. M., four charts, for cutting dresses, pants and coats, four dolls and a doll chair.
Chamberlin, H. L., a crystallized water cooler
Clark, R. F., a pencil drawing, "The Scotch Gamekeeper."
Cohen, Mr.—A case of dried California insects.
Chadbourne, Mass—A piece of black lace.
Crowell, G. E.—Model of a house with furniture.
Campos, A. D.—A Mexican saddle.
Chipman, Mrs., a log cabin quilt.
Conrad, A, one writing desk chair, one shaving stand.
Cluver, H, a bag of specimens copper ore, from Bolinas, Marin county.
C. H. Hain & Co., an electric clock; a pair of sheep marking tongs; a turning lathe, and a pair of grape-cutting shears.
Cummings, G. J., a box of assorted fruits.
Chy Lung & Co., a case of Chinese fancy goods.
Canan, Mrs. W. S., a specimen of embroidery.
Christie, Mrs., five tidies.
Coyle, C., a racing boat.
Cook, R., a galvanized iron life boat.
Canseaur & Hobart, two tables of flowers.
Cady, L., a couple of specimens of quartz from the Potosi mine, Virginia City; a specimen of lava from the Sandwich Islands.
Chy Lung, a Chinaman on Dupont, near Washington street—A monster, carved in wood, and variegated with red, white, brown, yellow, black and green paints.
Chapman, Mrs. C. M.—One show case, containing hair coloring.
Clement, R. P.—Two sea-moss and shell frames.
Curtis, M—An express wagon for carrying pianos.
Clawson & Johnson—A patent churn.
Cummings, Mrs—A worsted picture, in frame.
Collin, Mrs—A tidy, the Quaker family, (a collection of images,) and one infant's robe.
Conrad, M D, two shell and moss baskets, framed.
Clark, Mrs P B, a vase of shell flowers, a case of moss-work in a shell frame.
Coppe, Victor, a child's bedstead in marble, a stand for glasses, a walking cane, a mirror, a bouquet holder, a small oval frame.
Clark & Perkins, Messrs.—Two cases of wool samples, of sundry kinds; also, a table of wool samples, of California manufacture; one case of Kerosene; three bales pressed wool.
Cook H. N.—3 leather hose, 1 blunderbuss, 3 sides leather.
Campbell, J. H. H.—1 lock.
Church & Clark—A frame of fire-works (blank).
Collins, Mrs. Alexander, San Francisco—Sea moss, framed—an ornamental picture.
Camp, Mrs. J. H., a piece of embroidery.
Chinmark, Moses, the model of a sliding bevel for ship joints.
Cameron, Whittier & Co., three mirrors.
Camp, J. H., a goblet made from the Hartford "Charter Oak," and a pamphlet.
Conroy & O'Connor, a patent pulley block.
Curtis, Mrs M L, fifteen pieces of furniture embroidery.

Dewey & Co., six volumes of the MINING AND SCIENTIFIC PRESS, as samples of newspaper printing.
Dubouque, E.—Three sigus.
Durkee, J. L., of Alameda county, a fireman's hat.
Dyer, W. D., fifteen photographs.
Drury, Mrs., glass case of down capes and trimmings.
Drouilhatt, two billiard tables.
Duquenry, J. B., a Corinthian capital of wood, a picture family frame of black walnut, and a Gothic oak panel.
Dyer, Mrs., a model water-wheel.
Drytown Quartz Mining Company, Amador county—A box of quartz specimens, gold bearing.
Doolittle, Mrs. M. A., one small vase of woollen flowers.
Dexter, A. G., two lever door-gongs.
DeYoung, Mrs. A., a crayon drawing of Gen. McClellan.
Dunn, John, a patent wine press.
Dunn, Peter—A case of riding boots.
Doane, Mrs.—A silk bed-quilt.
DeClair, Mrs.—Tapestry picture of Washington.
Durier, Charles, a pencil drawing.
Dewoo, Binsmore & Co., a model sugar mill.
Denney, Mrs. E., a case of tatting.
Daniel, John, a marble headstone.
Durier, Carl, double frame rural scene.
Deaf, Dumb and Blind, a show-case of bead and crochet work.
Dain, Miss Hannah T, a bible cushion.
Dickey, George S, a case of chemicals.
Dewey, J H, a patent churn; Wescott invention.
Doe, C. A., the model of a harvesting machine.
Dreyfors, A, four frames sample cards and penmanship.
Devancy, E., A pencil drawing.
Drury, Mrs., a frame of patent dress cutting charts.
Dutton, Harry—three pictures of flowers in water colors
Doolittle, Mr, three frames of penmanship.
DeCamp, Mrs Abbey G, a glass vase of shells and sea weed
DeYoung, C, a likeness of General Grant, in crayon, by M. A. DeYoung.
Dietrick, W. K., a case of hams, bacon and lard.
Dolliver, Thos., a case of boots and shoes.
Dennis, T. N., a picture in water colors.
Dunn, N. W, a rock drill.
Dr. Beers & Son, a vase of dentistry.
Dietrick, W. K., three boxes and one bag of bacon.
Davis, Hugh, 3 pumpkins, weighing in the aggregate 125 pounds.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJUSTING WRINGer. No wood work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $6.50. No. 1, $7.50. No. F, $8.50. No. A, $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,

No 13 Plain Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb-Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the best Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST Putnam's Wringer. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co:—

GENTLEMEN. I know from practical experience that iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use. Respectfully yours,

JNO. W. WHEELER. Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.

New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.

6-tf

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Mining Notices.

Advertised in Previous Issues.

Aspinwall Gold and Silver Mining Company, Amador District, Lander County, N. T.

CAUTION.—The public are hereby cautioned against negotiating for the following described Certificates of Stock of the above named company, as the same were sold for delinquent assessments, on the 13th day of August 1864, and will not be transferred on the books of the company, to wit:

Certificates No. 80, 81, 82 and 83, standing in the name of B. T. Hunt. Certificates No. 71, 12, 73, 74, 75, 76 and 77, standing in the name of W. D. Malhenay.

11 JOSEPH HEALY, Secretary.

Astor Gold and Silver Mining Company, No. 436 Jackson St., City and County of San Francisco, State of California, Gold Hill Mining District, county of Story and Territory of Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 10th day of August, 1864, the several amounts set opposite the names of the respective shareholders as follows:

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Caldwell Gold and Silver Mining Company, Cove District, Kern River, Tulare County, California.

Kern River Gold and Silver Mining Company, Cove District, Tulare County, California.

The office and principal place of business of the above named Companies, will be removed from the City of San Francisco to Cove District, Tulare County, California, after the necessary legal steps are perfected.

M. G. ELMORE, Secretary.
Office, 621 Clay street.

10-4t B. W. MUDGE, Secretary.

Tellurium Gold and Silver Mining Company, Pine Grove District, Amador County, California.

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment No. 7, levied on the 13th day of July, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Boylan, Joseph	26 to 30 inc—ca 20 shs	100	100 00
Chevallier, V	113	5	5 00
Collins, E S	232	10	10 00
Dow, J G	234	5	5 00
Dunlp, J P	15	10	10 00
Hall, J H	79 80-ca 50	100	100 00
Gay, A C	256	53	53 00
Hughes, Chas	134	5	5 00
Marina, E J de Sla	214 to 217 inc—ca 10	40	40 00
Marina, E J de Sla	218 210—ca 5	10	10 00
Matthieu, A	138	10	10 00
Marguerlere G	159	10	10 00
Martinon, L M de	166	20	20 00
Smiley, James	96	50	50 00
Thonet, N	268	10	10 00
Whitney, Geo O	204	50	50 00

And in accordance with law, and an order of the Board of Trustees, made on the 13th day of July, 1864, so many shares of each parcel of said Stock as may be necessary, will be sold at the auction room of Jerome Rice & Co., No. 327 Montgomery street, on the 27th day of August, 1864, at the hour of 11 o'clock A. M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

WM. H. MARTIN, Secretary.

Office, 627 Clay street, San Francisco, Cal. 7

POSTPONEMENT.—The above sale is postponed until Wednesday, September 7th, 1864, at the same hour and place. By order of the Board of Trustees.

9 WM. H. MARTIN, Secretary.

POSTPONEMENT.—The above sale is postponed until Wednesday, September 14, 1864, at the same hour and place. By order of the Board of Trustees.

10-1 WM. H. MARTIN, Secretary.

POSTPONEMENT.—The above sale is postponed until Wednesday, September 21st, 1851, at the same hour and place. By order of the Board of Trustees.

12 WM. H. MARTIN, Secretary.

Lost!

Certificate No. 191, of 150 shares, of the Table Mountain Copper Mining Company's Stock, standing in the name of N. B. Edmiston. All persons are cautioned against negotiating for the same, as transfer has been stopped.

M. G. ELMORE, Secret

San Francisco, August 25, 1864. [9] T. M. Cop. M.

A BIRD'S EYE VIEW OF BUSINESS.

During the early part of the week trade languished, with but few sales of importance outside of the Sugar Refinerics who entered the market nnd bought largcly of Muscovadas nt enhanced figures. At tbe close of tbe week a decided improvement was made manifest by nn active inquiry for Coffee nnd Rice, with free sales of the latter, and every indication of a better market for Coffees and Teas in the future.

The Oregon trade is fast augmenting in proportions. She is now one of our best customers—buys largely and pays promptly. The fall business with the interior of our own State has not yet fairly set in, though there are some indications of a revival in the demand from that quarter soon. Now Sacramento millers supply a large part of the Flour for the interior marts, whicb heretofore went from here.

Flour with us, now rules at $9@$9.50 for superfine, $10@$10 50 for extra; Wheat of choice quality $3.40@$3.50; Barley $3.25@ $3,45; Oats $2.75@$2.95; Potatoes 3¼@ 3¾c. per lb.; Bran $45 per tou; Hay $23@ $28; California Dniry Butter 55@60c., Isthmus 30@32½.

We quote Java Coffee 24@25c, Costa Rica 22c, Rio 21½c.; Candles 17@19c. per lb.; Crushed Sugar 16¼c.; No. 1, China and Hawaian 12@12½c per lb.; Golden Syrup 55@60c.; Codfish 14@15c per lb.

Engine House, Etc., Burned.—We regret to learn that tbe engine and shaft house of tbe Table Mountain Copper Mining Company, with its contents—900 ore sacks, carpenter's tools, ropes, tubs, mining tools, etc., togetber with about forty cords of wood, was destroyed by fire, about 4 A. M., ou the 13th instant. The fire is supposed to have been caused by sparks from the engine lodging in the woodpile. Work on tbe engine ceased at midnight when the hands above ground retired, leaving six men underground, who were extricated through the air shaft. The engine is but slightly injured. The damages by fire and delay will amount to about $4,000. The product of the mine for the present month, in consequence, of this accident, will not exceed 50 tons, instead of crushing 100 as was expected. We regret to hear of this accident, as the company was fast developing its claim, and was in a fair way to complete that work without any further expense to the shareholders. This disaster, however, will render another assessment necessary, and we understand it will be levied forthwith. This is too valuable a claim to allow of even a temporary suspension of work.

A Matter of Taste.—A connoisseur of liquors, or one who claimed to be such, in company with several ladies went into the fair restaurant this morning, and called for ice-cream for his companions and brandy punch for himself. The polite waiters promptly brought the compounds, when the gentlemen to show his taste and admiration for the ardent, ordered the waitar to make the punnh stronger. This was instantly done, when the 'connoissuer' became very much incensed, asserting that he had ordered a brandy, but had been served with a whisky punch! When it is stated that not a drop of whisky is kept in the restaurant, the correctness of the gentleman's taste becomes apparent.

Back Again.—The much itemised "Aquila," the reporters' god-send during the past winter and spring, has returned from Mare Island dock, with her hull in thorough repair. Much, however, remains to be donc to ber upper works and rigging, ere she ngain "walks the water like n thing of life." Strangers and all others wishing to see this famous craft can do so by going to Jacksou street wharf.

A copper mine has been found near New Almaden, and some rich specimens of carbonate have beeu taken from it.

Quartz Mill Burned.—A telegram from Aurora states that the Durand Mill was burned down on Tuesday night last. It is supposed to be the work of an incendiary. Two persons have been arrested on suspicion.

Communication.

Editor Mining Press:—I shall commend to your correspondent "Pundit" a more thorough and careful reperusal of my two articles, and tbeu if he is still dissatisfied, and is willing to risk his reputation as a geologist and mineralogist upon tbe views he may advance upon those questions, he may he called upon to answer during the discussion; and if he will sign his own name in full to his communications, I shall be very happy to discuss the matter with him. He may bring the "Shade of Humboldt" with him, as an aid, if he pleases, but they may find that facts—on which aloue I bave endeavored to take my stand—are stubborn things. O. W. Easton.

Tin.—If there be any substance more than another that has rendered England famous throughout the world, it is Tin. Camden, the historian, supposes that this country, from the abundauce of tin which it contains, was called Britain. In the Syriac language *varatanac* signifies *land of tin;* whence is derived Britain. The mention of Moses, in the 31st chapter of Numbers, 22nd verse, is proof of its being known from the remotest antiquity. Long before the Christian era the trade in tin caused many a vessel to spread its sails in the Mediterranean Sea, and to cross the Bay of Biscay to fetch it from these sbores. The alchemists of old considered tin to be a mixture of silver nud lead, but modern chemistry proves it to be a distinct metnl. About 10,000 tons of tin are extracted every year from the mines in Cornwall nnd Devon, nearly the whole of which is consumed in the manufncture of tin-plate (*fer-blanc*, or white iron, as the French term it), that is, sheet iron coated with tin; and it is this substance which constitues our famous tin-ware, which finds a market from Naples to Japan, from New York to Eupatoria. Melted tin forms a sort of varnish for iron, nnd prevents that metal from rusting; when copper is coated with it verdigris cannot be produced. Tin and lead melted together produce what is called "Britannia metal," of which teapots and similar domestic utensils are made. It is owing to a mordant of tin that the dyer produces the fine scarlet cloth so famous as the Royal and military color of this country. In many other ways we could show how very useful tin is; but it is enough for us to state that Englnnd is the tin-plate manufacturer for the whole world.—*Piesse's Labratory of Chemical Wonders.*

Great Numbers of Mechanics are now going to West Tennessee, in the employ of the Government, at $3.50 and $4 per day, with board. These workmen are chiefly such as are skilled in bridge and railroad building, and in the construction of engines and cars. A government agent was recently located at Hartford, Conn., to procure these workmen, and furnish them with transportation at government expense.

A Beautiful Thought.—A writer, whose life has passed its meridian, thus discourses upon the flight of time:

"Forty years once seemed n long and weary pilgrimage to make. It now seems but a step. And yet aloug the way are broken shrines, where a thousand hopes have was'ed to ashes; foot-prints sacred under their drifting dust; green mounds where the grass is fresh with the watering of tears; shadows, even, which we would not forget. We will garner the sunshine of those years, and with chasteued step and bopes, push on toward the eve."

A Fact Worth Knowing.—It is a fact worth knowing that at the south-east corner of the Pavilion of the Mechanics' Fair, H. Behre has an elegantly fitted up restaurant, where anything, from a cutlet to a chicken, tea, coffee, cakes nnd pies, may be had, served up in style at the same rates charged in restaurants. This is a great convenience to strangers from the country for whose information we write.

A little boy in New Haven drowned himself, to escape the cruel whippings of his father.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the Mining and Scientific Press on application at the office

Buy It for Your Friends at Home.—Buy the *Mining and Scientific Press* to send home to your friends at the East. It contains the fullest reports of the Mechanics' Exhibition published in the city. The last number is embellished with views of each of the three Pavilions, which have been erected in this city. No more acceptable newspaper can be sent to your friends. For sale neatly done up in wrappers for mailing, at the office of the Daily Fair Press in the Pavilion, and at the news depots generally.

Soap.—The Eureka Soap Company make a grand display of their manufactures at the Fair. Their imported chemical olive crasive soap appears to be as good as all the ladies represent it to be. Some of the articles moulded in this soap in the form of eagles, and other shapes, are as white as snow, and as hard as marble; while others moulded in forms such as the ladies cast their jellies, appear much more like that article than soap. The exhibition by this company is an honor to their branch of our local manufactures.

Grain.—About one thousand tons of wheat, and two hundred tons of barley are now stored in Lewis Pierce's warehouse, Suisun—most of the grain being of this year's crop. In addition to this, quite a quantity has already been shipped out of the warehouse to San Francisco.

A Machine Not Yet Invented.—It will scarcely be believed, but it is nevertheless as true as daylight, that a couple of quite interesting young ladies went up to the person in charge of Prater's Concentrator and enquired with absolute earnestness, whether that was the machine invented for the manufacture of lard? Ye gods and little fishes! People in this city, in this day, asking to see a machine for making lard.

Not Affected.—The Gold Hill *News*, speaking of the late dividend declared by the Confidence mine, of Gold Hill, says that "the Gold Hill mines which are opened, are not in the least affected by the crisis. There are plenty more mines here like them—and all that is necessary, is just to expend a little more labor nnd money to open them. Some of the companies are again commencing operations."

Capt. Price and party have reached Salt Lake from an exploring tour for the location of a wagou road from that Lake to the head of steam uavigation on the Colorado. He reports having found a route highly feasible.

Evening Instruction in Anylitical

Chemistry and Assaying,

Conducted by Thomas Price.

(Agent for the Swansea Ore Importers in California.)

Having fitted up a laboratory especially for instruction in Analysis and Assays, the subscriber begs leave to announce that

A NEW CLASS WILL BE FORMED

On the 1st of June. For terms apply at the Laboratory, on the evenings of Tuesday and Saturday at 7 o'clock; or at the office of the "Pacific Mineral Company," Odd Fellow's Hall, Montgomery street. THOMAS PRICE.

San Francisco, May 10th, 1864. 20

WHEELER'S

Amalgamating & Separating Pans.

It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

PRATER'S

PATENT CONCENTRATOR.

The proprietors of this new concentrator, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNT'S

IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

SAN FRANCISCO.

THE INCREASING BUSINESS OF OUR ESTABlishment, together with the wants of the Trade, have made it necessary to establish a House in the City of San Francisco, where we will be pleased to see as many of our old friends and customers as can make it convenient to call upon us. We shall keep at both places a large and well selected stock of

DRUGS AND MEDICINES,	PAINTS AND OILS,
SURGICAL INSTRUMENTS,	PATENT MEDICINES.
DENTAL GOODS,	HERBS AND EXTRACTS,
FANCY ARTICLES,	BREWERS' AND SODA
BRUSHES AND COMBS,	STOCK,
SHOULDER & BODY BRACES,	CORKS, large variety;
LADIES' BANDAGES AND	ASSAYERS' MATERIAL,
SUPPORTERS.	BURNING OILS & FLUIDS,
GUM ELASTIC STOCKINGS,	PLASTER PARIS,
TRUSSES,	MARBLE DUST,

Together with a large and complete assortment of all Goods kept in a well supplied Wholesale Drug Store.

We respectfully solicit those dealing in our line to examine and price our stock before purchasing elsewhere.

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press
COMMENCES
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgments to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By ubi of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,
An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,
And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the minimum.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion, and for these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims to his expectations accordingly. There are other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for this service varies from $10 to $20. The Government fee under the new laws is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $30. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. In this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have procured cases prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed three inches in any of its dimensions; it should be neatly made, of wood, glass or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, which is the safest way to remit, or by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be prosecuted to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredient sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for foals, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil cloth, prints, paper-hangings, and other articles. Trade-marks, labels, cards, boxes, bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos..	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

RICHARD WEGENER,
Accountant, Mining Secretary,
AND GENERAL AGENT.

No. 204 Montgomery St., Southeast cor. Montgomery and Pine Sts., San Francisco, 11-m

GREAT TRIUMPH
—OF THE—
FLORENCE!

THIS CELEBRATED NEW SEWING MACHINE HAS THE FOLLOWING ADVANTAGES OVER ANY AND ALL OTHERS!

☞ It is the only Machine that will sew different thicknesses or over rough uneven surfaces making through or over all the same uniform and perfect stitch, WITHOUT CHANCE OF TENSION.

☞ It is the only Machine that has the *reversible feed motion*, which enables the operator, by simply turning a thumb screw, to have the work run either to the right or left, to stay any part of the seam or to fasten the ends of the seams, without turning the fabric.

☞ It is the only Machine that makes more than one kind of stitch. It not only makes the lock-stitch, but three others, which, for certain kinds of work, are much superior, especially where elasticity is required.

☞ It is the only Machine that will gather and sew on at the same time, and do it more evenly than it can be done by hand.

☞ It is the only machine that fastens the end of each seam securely, and does it in one fourth the time than it can be done by hand.

☞ It does not draw thin, fine goods down through the slot in the work plate, nor drop a stitch in turning a corner.

☞ Changing the length of the stitch, and from one kind of stitch to another, can readily be done while the Machine is in motion.

☞ *Every stitch is perfect in itself*, making the seam secure and uniform.

☞ It is almost *noiseless* in its operations.

☞ Its motions are all *positive;* there are *no springs* to get out of order, and its simplicity enables the most inexperienced to operate it.

☞ *It will not oil the dress* of the operator, as all the machinery is on the top of the table.

☞ *It is the most rapid sewer in the world*, making five stitches to every revolution.

☞ It makes a stitch alike on both sides of the fabric.

☞ *It does the heaviest or finest work* with equal facility, *without change of tension.*

☞ Every Machine has one of Jenck's patent hemmers attached, (the right to use which we control,) enabling the operator to turn *any width of hem desired.*

☞ There is no other Machine which will do so large a range of work as the FLORENCE.

☞ It does not require finer thread on the under side, than it does on the upper, and uses any kind of thread or silk.

☞ The needle is more easily adjusted than in any other Machine.

☞ It will sew across the heaviest seams without change of tension or breaking of thread.

☞ It is fully protected by nine patents; and licensed by Elias Howe, Jr., and associates.

☞ To avoid the *strain on the eyes, bent postures, close application and fatiguing care*, heretofore necessary on a large proportion of work done on other Sewing Machines, we now furnish each machine with "*Barnum's Self-Sewer,*" *which guides the work itself*, and is of great value, especially to inexperienced operators.

☞ While possessing the above and many other advantages, the FLORENCE is sold at corresponding prices with other first class Machines.

☞ We warrant every Machine to do all that we claim for it, and will give a written warranty if required.

☞ *Over Seven Hundred Florence Machines* have been sold on this Coast in the short time since the agency has been established here, and in no instance can a person be found who has a FLORENCE that would exchange it for a Family Sewing Machine of any other manufacture, which is convincing proof that they are what we claim,

THE BEST FAMILY SEWING MACHINE IN THE WORLD!

☞ Do not leave the Pavilion before seeing the FLORENCE and securing Circulars and Samples.

To fully appreciate it, parties should see it in operation, so how easily and with what little change in the Machine it does all the different pieces of work.

SAMUEL HILL, General Agent,
1-tf No. 111 Montgomery Street, San Francisco.

COPPER SMELTING.

By one of those unavoidable, but at the same time most annoying mistakes that the reporters of the press fall into when mentioning the objects or exhibition at Mechanics' Fairs, with so many of which they must of neeessity be wholly unacquainted, in meutioning the processes for smelting eopper in yesterday's Fair Press, we got thiugs so mixed np that great injustiee was done to a very enterprising and energetic eitizen, who has spent many thonsand dollars in perfecting processes to smelt the ores of eopper in our own State. Tho report stated that the bars of copper on exhibition were made by Mr. McDougal hy a new and rapid proeess, nnd by the use of the flux of his discovery, and that he was erecting a furnace at North Point to operate on a larger scnle. While it is true that Mr. McDougal exhibits some fine bars of eopper, obtained by his process, that gentleman is in no way connected with the smelting works now in eourse of creetion and nearly eomplcted nt North Point—these works are the sole property of Mr. C. E. Johnson, who has a patent right for this process of smelting copper, and exhibits a splendid bar of that metal obtained by thie process, which will he found, duly labelled, on a tahle in the central avenue near the telegraph stnnd.

We have been induced to make this lengthy explanation from a knowledge of the importanee of Mr. Johnson's process, and the benefits it will confer on the copper mining interests of the State when it shall become generally known. The works he is having erected at North Point, on which he has already expended upwards of $10,000, will shortly be in operation, nnd we have every reason to believe that they will profitably operate upon that class of ores which will not pay to export; a result that will render copper mining one of the leading interests on the Pacifie Const. Mr. Johnson's process also saves and separates the large percentage of gold and silver present in many of the ores of eopper found in this State. Another important object of this notice is that so important a matter as the erection of the North Point Copper Smeltiug Works, may he eredited to Mr. C. E. Johnson, whose money, skill and enterprise have caused their erection.

A Bad Bargain.—The editor of the Daily Fair Press, has been presented with a piece of pine wood taken from the planking of the hottom of the yaeht Eureka, recently purchased hy the Board of Supervisors of this city, for polico serviee in the hnrbor. If the whole of the planking of the vessel is in the same condition as that presented to the editor, the Board have most certainly made a bad bargain in purchasing the Eureka. The specimen is litternlly honey-eomhed by the toredos which have eaten away nearly the whole suhstanee of the wood. But that's the wny the money goes. The specimen may be seen at our stand in the Pavilion.

Our Fair Paper.—We are especially pleased to learn that our efforts to bring out a "Fair Paper" which should he worthy of the splendid exhibition which the mechanics, manufacturers and others of this eity and State, have got up, are duly appreciated. Inasmuch as the exhibition has so far exceeded, in magnitude and interest, the original conception, so we have endeavored to keep up with the interest, and have produced a paper just twice the size which we hnd intended. The avidity with which it is called for, by the passing crowd, is an encouragement to our labors, nnd an earnest to our advertising patrons that their business cards are not falling listless and unnoticed from the Press. When the rush is at its hight, our steam press can scarcely furnish copies as fast as they are called for.

Unfortunate Occurrence.—A little daughter of Mr. Stevens, one of the proprietors of the San Lorenzo Hotel, Santa Cruz, last week swallowed a quarter of a dollar coin. It is probable, from symptoms in the child, that the coin has not reached the stomach, but has lodged in the œsophagus. She has been brought to this city for surgieal assistance.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
The undersigned would announce to the public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

To Mexican Mining Companies.
A person in every way qualified desires a situation as Superintendent for some Company working in Mexico. Is a first class Assayer and Metallurgist and can give the best of references. Address, Mexico, Lock Box 2113 P. O. San Francisco. *9-3t

Furnished Tools for Your Boys.

We know many an excellent mechanic made just from the fact that in boyhood he learned the use of a few joiner's tools. A boy, if he be not utterly stupid, takes to using a hammer and driving a nail as soon as his right hand can lift the one or the left hold the other. And as boys grow older, nothing engages their attention or fixes their thoughts, when wanting recreation, like puttering about something or other, with a saw, a hammer, some nails and a gimblet. No matter what they make—whether it be a martin or a wren-box, a rat-trap or a hen-coop; it is all the same, so that they make *something*, amuse themselves and learn the use of tools. In fact, we consider a well-furnished tool-chest for boys of as much consequence, and as profitable an investment as we do a set of school-books; and a boy who, at the age of fifteen years, cannot make a good, substantial dry goods box to pack his traps in, why, that boy's education has been neglected. We do not confine these remarks to farmer's boys alone; they apply to everybody's boys—city, village and country. Nor where there is a gardener, or farmer, should the little garden tools be omitted. The boys should have the best of tools, and fitted to their own size and strength. We have seen many a bright, ambitious boy driven out of the garden, the field and the meadow, because he could make no headway with a a miserable cast-off tool given him, which no one else would use, but "it was good enough for a boy!" We consider it an outrage, as well as an injustice of the grossest kind, to turn a boy out to labor with a poor tool. If you hire a man and expect him to do anything, he has got to have *good* tools, and if a man of any spirit, he will not work without them. And so with the boys; they should be taught that their labor is worth something, and nothing will so readily convince them of the fact, as to furnish them with the best of tools, such as they are.—*American Agriculturalist.*

TIME IT WAS STOPPED.—We clip the following well timed paragraph from this morning's *Alta:*

Many of the holders of season tickets for the Industrial Fair have been in the habit of giving their tickets to children, generally half-grown boys, and so allowing them to visit the Fair unattended by parents or guardians. The children have generally managed to "ring in" one or more companions, and many of them have so grossly misconducted themselves while in the building, that the managers have been compelled to enforce the rule, and will hereafter take up the tickets when presented under such circumstances. Holders of season tickets will do well to bear this fact in mind in future.

A NOVEL GUNBOAT.—The great Iron Company of Marseilles have just completed, at their dock-yard at La Seyne, near Toulon, an iron-plated steam gunboat on a new model. It has already been tried, and the result was most satisfactory. It may be easily separated into eighteen pieces, and each of these forms a small boat, which may travel over land or navigate the sea with equal facility. The gunboat, when entire, accomplished eight and a half knots an hour. When taken to pieces a whole fleet of gunboats may be moved from one place to another by railway at the rate of thirty-five miles an hour.

A BEAUTIFUL THOUGHT.—A writer, whose life has passed its meridian, thus discourses upon the flight of time:

"Forty years once seemed a long and weary pilgrimage to make. It now seems but a step. And yet along the way are broken shrines, where a thousand hopes have wasted to ashes; foot-prints sacred under their drifting dust; green mounds where the grass is fresh with the watering of tears; shadows, even, which we would not forget. We will garner the sunshine of those years, and with chastened step and hopes, push on toward the eve."

DEW.—On no subject have there been more incorrect notions than on the nature and origin of dew. Even at the present day, commonness of the phrase, falling dews, shows how erroneous are the prevalent notions. The dew never falls, at least no perceptible distance; it is deposited from the layer of air in actual contact, with the bedewed object. That it does not fall is evident from the under side of a plate of ice cream being bedewed. The coolness necessary to produce dew is produced by clearness. A heavy dew proves the clearness of the air, and warns the astronomer to lose no time in getting out his telescope.

QUICK WORK.—We saw the owner of one of the churns on exhibition at the Fair, make good butter from fresh milk, in less than five minutes.

A MAGNIFICENT

LITHOGRAPHIC VIEW

OF THE

Mechanics' Fair Pavilion.

PUBLISHED AND SOLD BY

DEWEY & CO.,

GEORGE H. BAKER, Artist.

At the office of the "Mechanics' Fair Daily Press," entrance nave of the Pavilion, and at the office of the Mining and Scientific Press, corner of Washington & Sansome streets.

☞ *READ WHAT OTHERS SAY OF IT.* ☜

MECHANICS' FAIR PAVILION.—We have received from Dewey & Co., Patent Agents and publishers of the SCIENTIFIC PRESS, Government House, corner of Washington and Sansome streets, a finely executed lithographic view of the Mechanics' Industrial Fair Pavilion, on Union Square. The picture is mathematically correct in proportion, and will be valuable hereafter as a souvenir of the greatest industrial exhibition ever held in our city.—"Daily Alta."

We are indebted to the publishers of the MINING AND SCIENTIFIC PRESS for a copy of a very excellent engraving they have issued of the Fair building and the Fair grounds.—CALIFORNIAN.

LITHOGRAPHED.—The Mechanics' Fair building has been pictured in good style, by George H. Baker. We acknowledge the receipt of a copy. DEWEY & Co. are the publishers.—CALL.

VIEW OF THE MECHANICS' INSTITUTE PAVILION.—MESSRS. DEWEY & Co. have published a lithographic view of this building. Size, 12 by 19 inches. The workmanship does credit to Geo. H. Baker, the Lithographer. The dimensions of the Pavilion are 375 feet in length, breadth 220 feet; dome 108 feet high and 100 feet diameter, the area being 55,000 square feet. P. J. O'Connor Esq., is the Architect. We hope the sheet will prove highly remunerative.—ARGUS.

437 Pine Street, San Francisco.

au3tf.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are boxing manufactured. THOMAS VARNEY.

sep21

THE STATE SANITARY COMMISSION.—The Californaia Board of the U. S. Sanitary Commission is now sending out agents through the State for the purpose of organizing local associations in all the principal towns aad mining camps of the interior. Three agents are already in the field. A report was received on Tuesday from Rev. Mr. Chapin, who was the first agent sent out, and whose department comprises Nevada and Sierra eouaties. He began his work last week in the towu of Nevada, and organized a subordinate Commissioa of a hundred members, who subscribed fifty cents a month, to be forwurded regularly to the parent office here. All collections are to be made by the offieers of the local organizations and forwarded direct by them to the Treasurer of the State Commission. No money will pass through the haads of traveling agents.

As the local organizations will select their own offieers, it is expected that none but the most effieieut aad trustworthy will be entrusted with the funds. When this system of organization is perfeeted it is expeeted that California will contribute from $30,000 to $50,000 monthly in aid of this great aud humaue objeet. This, in greeabacks, will foot up a telling sum for the sick aad wounded soldiers.

Californuia is not called upon to furnish men for the armies, but she is doing more by her liberal aad patriotic coatributions. She is aetually *saving* more lives than would be her quota under the eall for volunteers. Nearly one half of all the lives lost in all wars, are from the uaavoidable neglect of sick and wounded soldiers, in and after hattle, when their eare is left to hired army nurses. Florence Nightingale immortalized her name hy starting the idea, out of whieh has grown the great National Sanitary Organizatioa of the United States. Californuia has been denominated the right arm of that organizatioa. Let her *deserve* as well as wear the laurels. The mission of California is to save life. Her's is a work of love and benevolence in wbich all of every shade of opiaioa in politics or religion can heartily join. For, be it remembered that the Sanitary Commission knows no sectarianism, no politics. The christian aad infidel, the rebel aud loyalist, are all alike to it. Wherever a sufferer from the horrors of war is found, there its work begins and stops not till the last one is relieved.

STANNARD'S PUMPS.—Ia the article of pumps tbe exhibition at the fair is particularly complete, froai the powerful machine of Capt. Harrisoa to the miniature modcl. But ia cheapness, durability and non-liability to get out of repair, Staanard's Rotary lift and force pumps possess several advantages. One of these pumps has been used by the Beasley Water Company for the last seveu months, and though but 8¼ inches in diameter, it supplies 100,000 gallous of water to that company every 24 hours. The largest oae on exhibition at tbe fair, is 12½ iaches. The small ones, which will lift 30 gallons of water per minute, 25 feet high and force it through aay leagth of hose, are only 5½ inches in diameter, and cost but $30, and require so little force to work them that a child cau tura their bandle. Tbese pumps are worthy the notice of farmers on the plains, miners, as well as of every onc requiring a supply of water from a well or cistern.

RICH LEAD.—A quartz lead, hut receatly opeaed, near the French mill on Little Deer Creek, says the Nevada *Transcript*, now yields the haadsome sum of $60 to the ton. Last week the "clean up" amouated to $3,000. Tbis lead was struck last March.

COLDS AND COUGHS CURED.—The poor man's riches, the rich man's blessing, is health, which is secured by the use of Brandreth's Pills. The wise use is when we are in pain or sick—say in doses of four or five every day or two, until we are well. These pills are not only good for the body, but for the mind; they cure restlessness, impatience, and irritability of temper, and no medicine can be compared t them for the cure of coughs and colds. Sold by all druggists.

THERE is nothing equal, in the way of a plaster, to the Porous Plaster of Mr. ALLCOCK. Everything is pleasant about them. They are the plaster of the day, and a fit type of our present advancement in science and art. In Asthma, Cough, Kidney Affections, and local deep-seated pains, they afford permanent relief.

J. F. JOHNSON, M. D., on "Topical Remedies."
Sold by all druggists.

THE WHEELER AND RANDALL PAN.

This new addition to the amalgamating machiuery of our State, is on exhibition, botli in model and working size, at the Pavilion, where it is attracting eonsiderable attention. The priaeiple on which this pan is coustructed is quite aew, although much resembliag another pan located near it, and well and favorably known to most of our quartz miners. All who bave paid any especial attention to tbe mechanical philosophy of grinding surfaces, as employed in the form of plancs, know there is a great difference hetween the amount of wear of the plates and mullers in the ceater of the surfaee and those at the circumferenee. A very simple mathematical demonstration, shows the preeise amount of this differenee, which may be stated with absolute precision as follows:

The mechaaieal work of plane, circular plates of the usual ring form, is niaety-eight.

The mechaaical work of conieal plates of the most approved form, is one hundred and tea.

The mechanical work of tractory formed plates, as iatroduced ia the iavention of Wheeler & Raudall, is oue huadred and seveuty-seven.

That is, the tractory formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conieal grinding plates oae hundred and ten toas, and the plane circular griadiag plates ninety-eight toas, to the same degree of fincaess ia the same time.

Thc first of the above forms is tbat generally employed; the secoad has been employed by Peterson & Hepburn, and the third has now heen brought out by Messrs. Wheeler & Randall. The idea of adopting the tractory conoidal form of plates originated with Messrs. Wheeler & Randall, and the perfected plan as now exhibited hy them, has been tbe result of mach study aad calculation. The mathematical demoustratioa of the aechaaical properties of the traetory curve which they have adopted, occupies some twenty pages of maauscript, and has been pronounced by Professor Silliman, to use his own words, as "original and very interesting, and satisfyiug perfectly the praetieal requirements of the problem." The caleulatious have also been submitted to F. D. Hodgson, Professor of Mathematics at the College of Californuia, in Oakland, who, after a careful examinatioa of the demoastrations and calculations, has pronouaced them "correct."

The inventors will take pleasure in exhibiting to visitors at the Fair, who are especially interested ia such matters, the peculiarity of this machine, and the important fact which it develops of tbe superiority of the conoidal over both the plane and coaical surface, as applied to quartz reduction. This inveution is one of the most successful aud interesting applications of strict mathematical science to practical mechanics, which is ofteu met with, aad reflects much credit upon the iagenuity aad scieatific researches of tbe iaventors.

SUNSCRIBE.—No more opportuae time for subscribing to the MINING AND SCIENTIFIC PRESS cau be had than the present. Commencing with its last issuc, and running through three or four more numbers, will he found the fullest report of the Great Industrial Exhibition now in progress, which will be published. The PRESS is the miners' and mechanics' owu paper, and the oaly one on tbe contiaent entirely devoted to their specialities. It is also a most excellent *Family Paper*, all the matter which it gives, beiag coafined strictly to that whicb is useful aad instructive. Persons from the iaterior who would like to subscribe for the most valuable paper on the coast will do well to call at the office of publication, No. 57 Governmeat House, corner of Washiagton and Sansome streets, or at the desk of the DAILY FAIR PRESS, in the Pavilion, at both of which places specimen numbers may be seen.

THE fifth annual Fair of the San Joaquin Valley Agricultural Society opened in Stockton on Tuesday, aud will continue four days.

MUSIC OF THE ANCIENT HEBREWS.—M. Salvador Daniel lately published, in Freaeh, a work entitled "Arab Musie." In this publieation tbe following passage occurs: "One cau say, guided by history, that the ornate style has always been pre-emineatly the style of the Orientals aad partieularly the Jews. In order to sbow the large sbare whieh tbe latter had in propagating and preserving the florid style, we will only cite two faets—one we borrow from aneient, the other from contemporary bistory. The ornate chant was introduced into Greece at the time of Plato says Aristines Quiutilian, by a Jewisb singer, Timothy, of Miletus; when tbe emperor of the French visited Algiers, a Jewish singer was selected from among many others to sing Arab airs before him on aeeount of his eminent talent. It may therefore be averred without paradox that the ornate chant is bêtter in its place as a leal characteristie in the mouth of the Jews, the Egyptians of Moses, and the Bablyonians of Semiramis than ia that of such persoaages as Barbier and Count Oru.

THE PAVEMENT of London is one of the greatest marvels of our time. It covers 3,000 aeres, two-thirds whereof coasists of what may be called mosaic work, done in plain style, aad the other third of smooth flagging. Sueh a series of works far transeends in quantity the Appiaa Way, whicb was the wonder of aneient Rome, and whieh would eut but a poor figure contrasted with one of our commonest streets. The ancient Cousular Way was but fifteen feet wide in the maia, and was filled with blocks of all sizes and shapes, jointed together and planed on the surface; the leagth of its devious course, from north to soutb of Italy, was under 300 miles. The paved streets of London number over 5,000, aad exceed 2,000 miles in leagth.

A BAD CALCULATION.—The managers of the Gould & Curry mine reeently reeeived a large east-iron balauee wheel, weighing 4,600 pounds, designed to be attaehed to their under grouad engine. On its arrival it was found too big to be taken into the tuanel. A had caleulatioa, certainly. They had another wheel, however, wbieb was cast ia two sections, aad has been substituted. The hluader was thus remedied.

CHEAP, STRONG AND ELEGANT.—These characteristics may be hoaestly applied to the tnaks manufactured by Steel & Co., 224 Sausome street, whose trunks, carpet-bags and satchels are exhibited at the Fair, and are really elegaat, strong and cbeap.

New This Week.

Fairview Copper Mining Company, Gopher District, Calaveras County.

And in accordance with law, and an order of the Board of Trustees made on the 15th day of September, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the office of the Company, on the 1st day of October, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

W. WILMOT, Secretary.

Office, No. 537 Washington street. 12-4t

Good Hope Gold and Silver Mining Company, Alpine District, Alpine County.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 12th day of September, 1864, an Assessment of 25 cents per share was levied upon the Capital Stock of said Company, payable on the 3d day of October, 1864, in United States gold coin to the Secretary, at his office, or to H. MORRIS, in Markleeville.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 15th day of October, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 29th day of October, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

PRESTON MORRIS, Secretary.

Office, No. 526 Montgomery street, San Francisco. [12-4t

Providence Gold and Silver Mining Company, Works at Nevada County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 16th day of September, 1864, an assessment of one ($1) dollar per share was levied upon the Capital Stock of said Company, payable immediately, in United States Gold Coin, to the Secretary, at his office, No. 8 and 10 Government House, Corner of Washington and Sansomo Streets, in the City of San Francisco, California.

Any stock upon which said assessment shall remain unpaid on the Twenty-Second day of October, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, November 5th, 1864, at 12 o'clock M. to pay the delinquent as sessment, together with costs of advertising and expenses of the sale.

12 J. M. BUFFINCTON, Secretary.

Salinas Gold and Silver Mining Company, Sa- linas, Monterey County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of September, 1864, an Assessment of twenty (20) cents per share was levied upon the Capital Stock of said Company, payable on the 12th day of September, 1864, in United States gold and silver coin to the Secretary at his office.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 15th day of October, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 29th day of October, 1864, to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. S. JOSSELYN, Secretary.

Office, Room No. 27 Covernment House, corner Sansomo and Washington streets, San Francisco. 12-4t

Tallulah Mining Company, Sierra District, Humboldt County, Nevada Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 6th day of June, 1864, an assessment of $15 per share was levied upon the Capital Stock of said Company, payable immediately then, in United States gold coin, to the Secretary, at the office of the Company, No. 623 Montgomery Street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 15th day of October, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 1st day of Nov. 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

CEO. A. HILL, Secretary,

Office, No. 523 Montgomery Street, San Francisco, Cal. 12

Zenith Gold and Silver Mining Company, Mountain Ranch District, Calaveras County, California.

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the 15th day of August, 1864, the several amounts set opposite the names of the respective shareholders as follows, to wit:

And in accordance with law, and an order of the Board of Trustees, made on the 15th day of August 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the office of the Company, No. 621 Clay street, San Francisco, Cal., on the 3d day of October, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale. M. G. ELMORE, Secretary.

Office, 621 Clay Street, San Francisco. 12

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors. | SAN FRANCISCO, SATURDAY, SEPTEMBER 24, 1864. | VOLUME IX. Number 13.

"Pundit" on the "Mathematics of Mining," Once More.

EDITORS OF THE PRESS:—Lest the clause "contrary to all scientific usage" in my former communication, where treating of the use made of the word "traps" should be misunderstood, I will state that although in its strictest sense as relating to the purely scientific, the statement is correct, yet Mr. Easton is not alone in a departure from the restricted use of the term. Prof. Jukes, a quite recent geological authority reports it as a vague general title for a certain class of erupted rock, but unlike Mr. E., does not confound it with *volcanic* rocks, place it as an absolute affix to self-invented or the original names not entitled to it, nor immediately league it with epithetical designations rendering the combination equivalent to the expression a "false truism." When George Washington Hannibal Snooks acquired his happy patrimonial prefixes his parents undoubtedly felt that they had bestowed upon their offspring a dignity and endowment above that of common mortals; pretty much the same parental regard I should judge had induced the originator of a new order of "traps" to designate the wall rock of one metallic vein "talcose, amorphous greenstone trap" and that of another "amorphous, greenstone talcose trap."

The number of changes that can be thus rung upon half a score of names he adds to the list of traps depends apparently upon the number of mineral veins he may examine. At any rate like that thoughtful old tyrant of ancient times who possessing beds of standard lengths stretched or cut of the limbs of his guests to make them fit their respective couches, thereby adapting ends to means, Mr. E. will not probably fail to find "traps" to be baited with anaconda titles, certainly not when he can discover massive formations before unknown in nature.

In first questioning the mathematical accuracy of the articles entitled the "Mathematics of Mining" it was not my intention or desire to detract in any manner from whatever might be meritorious and at the same time possessed of originality either in form or connection in said articles; for he who adds a single fact to the elements of a science has accomplished a work worthy of praise. But if a solitary fact must be received in a setting of errors I doubt the benefits immediately conferred as I would if presented a nugget of gold concealed in a mountain of earth. Amid the mass of errors in Mr. Easton's communication there struggles an idea deserving of a better fate than being gibbetted with bad names.

This idea, which is not new with Mr. E. relates to a system in our mines represented by rocky belts running northwest and southeast, along which in precisely similar connections occur mines of the same general order and character. He narrowly escapes giving the number, width and order of these belts, and thereby a data wherewith other observers might compare their own knowledge of them in other situations. It is evident that Mr. E. has studied these belts in the vicinity of copper and quartz veins, where chemical action, whether we consider it as creative or merely a consequence of the vein formation, must be continually operating to produce changes in the surrounding rocks. Metamorphism is something overlooked in the formulas of "Mining Mathematics," and per consequence every gradation or alteration in the ordinary character of rocks—changes consequent upon the geological position of the primary deposition, or else subsequent to the assumption of a rocky form—assumes a new face. The claiming of positively new features in old general forms, marks a research as slight as a child's view of a kaleidoscope, wherein a few rude fragments of rock reveals to its vision a multitude of structures. He talks of a black metamorphic clay slate, forming the wall rock between the veinstone of a lode and the less altered general formation of clay slate as an individual belt of "black talcose slate." In what respect it can be considered talcose, it would puzzle a mineralogist to find out, unless by reason that over it, at the surface, the metamorphism is often talcose, while beneath, the characteristics are different; the notable appearance being a black color due either to iron or carbon and a close fibrous structure, though otherwise clay slate. Some of the talcose positions he notices are due to the causes I have mentioned, and are quite limited in area, while others more extensive have to all appearances been wrought from original magnesian sedimentary formations. It is through a failure to recognize the living and ever operating powers of nature and their results, that Mr. E. has given eccentric orbits to his mathematics. With him all true slate must be primitive and attended by anthracite coal, because, in countries where the strata is but little disturbed, they form considerable beds. And yet, slates are but the effects of metamorphism of structural form; either pressure or chemical action having produced cleavages more or less at right angles to the plans of stratification, and in the direction which Mr. Eaton sees glimpses of internal fires and of their igneous origin. Wherever we find an upthrust of erupted matter among obviously sedimentary beds, there we will either discover slates or silicious masses, regardless of the geological age, and the teachings of one who only discerns in such the primitive epoch of geological creation is reduceable to the primitive or the fossilized stage of geological knowledge.

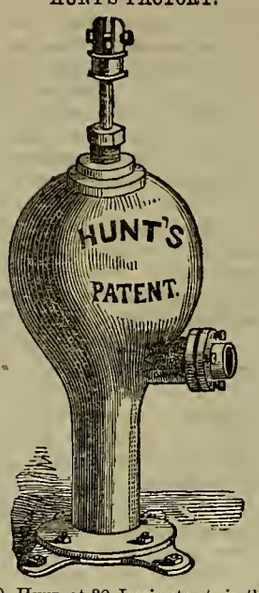
PUNDIT.

NOVEL UNDERTAKING.—Some individuals in Chicago have constructed, on the most primitive principles, an odd craft called the "Idaho," in which they propose to sail to the Territory of that name by water. A superstructure of old boards is erected on the hull of an old scow, and in it are located the berths, and on each side, together with a cooking stove and larder well stocked, while round the walls are hung in most admired confusion, rifles, revolvers, bowie knives and other weapons. The hurricane deck is covered with all manner of articles suitable in a new country, and a complete stock of mining utensils. The boat is propelled by means of a 12-horse power engine, which turns a stern wheel, such as are frequently seen in western waters.

It is anticipated that a speed of from eight to ten knots an hour will be attained; but whether she will be liable to make good headway against the rapid current of the Missouri River remains to be seen. It is proposed to sail up the Chicago river into the canal, and onward to the Illinois River; thence by the Mississippi into the Missouri River, sailing as far up as Fort Benton, the head of navigation. At this point the engine of the boat will be taken out, and with the cargo and baggage, conveyed across the country two hundred miles on wagons at Bannock City. On the arrival of the party to Bannock City, a brewery, distillery and saw mill will be erected. The engine of the boat will furnish the motive power when the buildings are completed.

GILBERT'S MUSEUM.—The Albinos; the Lightning Calculator; the Juvenile Giant—a boy of 18, eight feet high; the Swiss Warbler; the Snake Charmer; and an entirely new series of Cosmoramic Views, are a few of the things at Gilbert's Museum, on Market street.

HUNT'S FACTORY.



E. O. HUNT, at 28 Jessie street, in this city, manufactures a great variety of machinery, such as pumps, windmills, horse powers, etc., which have acquired great popularity among ranchmen and others requiring such machinery. Hunt's Endless Chain Power is a very useful machine for running small machine shops. The speed of this power is regulated by a common ball governor, creating a uniform and steady motion to all the machines driven by the horse. Hunt's windmill is too well known to need any special commendation from us. Scores of them are in constant operation in various parts of the State, and orders for others are constantly accumulating. Hunt's Pump is quite as generally and favorably known. It is adapted for all kinds of wells, and is both cheap and durable.

Hunt's Rotary Shears for cutting iron, is quite a novelty; also, his mill for grinding horseradish. The demand for bolts and nuts is so large in his business that he has set up all the machinery necessary for manufacturing these things on his own premises. He is also manufacturing a useful apparatus for running sewing machines, which latter is a rare blessing to those who are wearing their life away in this unnatural exertion of driving these useful and indispensible articles by "foot power." This apparatus is propelled by a weight, and the motion properly regulated by a governor working a brake against the balance wheel. A small but useful little machine for coring and paring apples is also made and sold by him. He has recently finished a pattern of a twelve foot lathe, and the first, we believe, ever built in California with all the modern improvements. Mr. Hunt has a veritable "Old Curiosity Shop," which it were well worth the while of people interested in such matters to visit.

SANITARY FUND.—The receipts of the skating pond in two days were $82; of the cheese, Thursday, $35; Friday, $37.50; making $154.50 for the Sanitary Fund in two days from those two sources.

CLASSIFICATION OF ARTICLES ON EXHIBITION AT THE FAIR.

Class I. Agricultural Implements and Machinery.
Class II. Mining Machinery.
Class III. Manufacturing Machinery and Steam Engines.
Class IV. Hydraulic, Hydrostatic, Pneumatic Engines and Machines, Turbines, Fire Engines, Pumps, Windmills, etc.
Class V. Copper, Brass, Iron, Tin, Lead, Etc.
Class VI. Stoves and Hardware.
Class VII. Watches, Clocks, Jewelry, Plate Ware, Chasing, Engraving, Etc.
Class VIII. Mathematical and Philosophical Instruments.
Class IX. Surgical Instruments and Cutlery.
Class X. Musical Instruments.
Class XI. Billiard Tables, Furniture and Upholstery.
Class XII. Carriages and Wagons.
Class XIII. Carving and Gilding.
Class XIV. Timber, Lumber, Scrolling and Turning Work, Staircases, Etc.
Class XV. Wood and Willow Ware, Coopering, Etc.
Class XVI. Wool and Its Manufactures.
Class XVII. Minerals and Mineral Products.
Class XVIII. Sugar and Its Manufactures.
Class XIX. Wire and Its Manufactures.
Class XX. Leather and Its Manufacturers.
Class XXI. Paper and Its Manufactures.
Class XXII. Glass, Porcelain and Crockery.
Class XXIII. Soaps, Oil, Glue, Rosin, etc.
Class XXIV. Stone Cutting, Masonry and Building Materials.
Class XXVI. Oil Painting, Photographs and Drawings.
Class XXVII. Architectural and Mechanical Drawings.
Class XXVIII. Statuary, Sculpture, Marble Work. Wax and Modeling.
Class XXIX. Sign and Ornamental Painting, Graining, Staining' Etc.
Class XXX. Ships, Boats, and Naval Stores, etc.
Class XXXI. Cordage and Ropes.
Class XXXII. Arms and Ammunition.
Class XXXIII. Wines, Liquors, Cordials, etc.
Class XXXIV. Horticultural, Botany, etc.
Class XXXVI. Domestic Machinery (Washing Machines, Coffee Roasters.)
Class XXXVII. Domestic Preparations, (Preserved Fruits, Pickles, etc.)
Class XXXVIII. Regalia and Military Goods.
Class XXXIX. Hats, Caps and Furs.
Class XL. Men's and Boy's Clothing.
Class XLI. Hair, Shell, Paper and Leather Fancy Work.
Class XLII. Millinery, Dress Making and Fancy Goods.
Class XLIII. Fancy Needlework, Worsted, Crochet and Knit Work.
Class XLIV. Curiosities.
Class XLV. Miscellaneous.

REAL AMAZONS.—Among the wounded rebel prisoners taken by Sherman at Atlanta were two women. The sex of one was discovered during the amputation of her leg. The other was mortally wounded by a grape-shot through the breast.

Gold in New York.

Friday, Sept. 16	223.
Saturday, Sept. 17	221.
Monday, Sept. 19	225@226.

Thursday, Sep. 22	221@222.

Legal Tender Notes.

San Francisco, Friday, Sep, 23 ..... 46¾ per cent.

The Mechanics' Fair.

From The Daily Fair Press of September 19th.]

The news from the East continues to be of the most cheering character. The Union armies have been victorious in a number of fights within the past few days, and Farragut with his fleet has Mobile at his mercy—three Federal ironclads being within the line of obstructions in the harbor ready to operate on the enemy. The government, in view of the importance of Atlanta as a base for military operations, has decided to make it a military station; and with the view to prevent the treachery that has so much impeded the operations of the army by informing the enemy of its commander's intentions, all the inhabitants have been ordered to leave, while traders and sutlers will not be permitted within the lines.

An entire regiment of North Carolina troops were captured by our forces on the 14th.

It is generally believed that the rebels, finding they cannot prevent Grant capturing Petersburg, are making preparations to retire from its lines toward Richmond—their last ditch.

The Southern papers like the Northern Copperheads are fearful in their denunciation of Sherman because he has hurt the rebels. Andrews of Massachusetts and Seymour of New York have been nominated for re-election as Governors of these States.

We notice that "Old Sanitary," the comical looking figure which has done such good service in behalf of the sanitary cause at San Andreas, Stockton, and the Christian Commission Fair in this city, has made his appearance at the Pavilion. The figure occupies a very prominent position by the side of the central fountain, and directly in front of the main entrance.

Messrs. Hansbrow & Redding have repaired the damage to their hydrostatic engine, and that beautiful machine is once more attracting the attention which it so richly deserves. The "Novelty Works" made a "clean up" on Friday, and retorted on Saturday, with the following result: 475 pounds of ore from the Ella Frances, Esmeralda, yielded $159.41; worked by E. B. Johnson. This little prospecting institution appears to be doing a good business.

The curiosity of our Chinese residents appears to be quite generally awakened, and we notice the attendance in increasing numbers, of the more intelligent and respectable portion of this class of people. The information which they will there obtain will not be without profit either to us or themselves.

The Sanitary fund, during the past few days, has received the following additional contributions: Ten specimens of silver ore from the "Esther" claim Reese River, worth as they stand, $50, presented by Mr. Reynolds of Placerville. A splendid robe by the people of Woodside, San Mateo County. This robe is made from the skins of the grey mountain squirrel and is really a fine affair. J. S. Harbison, of Sacramento, has donated six cases containing 24 section boxes of honey, weighing in the aggregate 360 pounds. Mr. Geo. H. Lovegrove, of this city has presented the Commission with a pair of elegant leather picture frames. Several other valuable contributions have also been tendered which will be introduced and described hereafter.

The receipts from the skating pond on Friday and Saturday amounted to $150; for the big cheese $102.

Scoundrelism.—Some malicious scoundrel has sprinkled the elegant miniature flower garden exhibited in the pavilion, with salt water, thereby killing, or seriously injuring that neat and attractive floral display. The proprietors offer a reward of $100, for the detection of the villain. We earnestly hope he may be found out.

The Total Receipts at the Pavilion, up to Saturday evening, had reached about $27,000, and the sale of the tickets still continues so encouraging that the managers have not yet began to think of fixing a day for the closing of the exhibition.

Hepburn & Peterson's Amalgamators.—These most effective machines, which introduced quite a new form and increase of power to amalgamators, and which have led to almost innumerable improvements in the direction these decidedly led, form one of the most interesting features of the fair. The beauty with which the pans of this form, there exhibited, have been finished at the Vulcan Works, attract the attention of those not initiated in mining, while their excellence for the purpose for which they were designed gains the approval of those whose interests are involved therein.

The peculiarity of these pans, and that which constitutes their excellence, is the conical shape of the pan bottom. The mullers or grinders being made to fit close to this bottom by a sort of lap, which is so arranged by means of a screw worked from the center, that it can be raised or lowered to any acquired degree of distance. These mullers, set in a diagonal form on this cap, when set in motion, force the pulp, after being ground and falling to the center under them, to raise over them and be re-submitted to the grinding process till fine ground as fine as required. There have been several improvements, or what are claimed to be improvements, on this motion, which is the best application of science to practice yet made in amalgamating processes. The fact that nearly fifty of the largest mills in this State and the adjoining territories, after using all the pans, have fitted up their establishments with these pans, and find them answer their expectations, is a greater proof of their excellence than any thing we can write on the subject.

How to Detect Mining Operations.—The application of saps and mines in the conduct of siege operations is the highest branch of military science. The advantages gained by Grant at Petersburg in the destruction of a strong rebel fortification by this means, is a forcible illustration of the advantages of such knowledge to a military commander. The detection of these operations to guard against them by a counter mine, is the most delicate and dangerous of military engineering.

An engineer of experience says that to ascertain if mining operations are going on in any vicinity it is only necessary to dig deep holes and place men in them to listen. He says that in some kinds of soil the work of excavation can be detected by sound at sixty rods distance. Had the rebels been aware of this fact Grant would not have scared them as he did at Petersburg.

[Tuesday, September 20th.]

This evening's dispatches to the *Bulletin*, contain the following brief but important paragraphs:

Detroit, September 20.—The steamer Parsons, plying between Detroit and Sandusky, was seized last night by 35 Confederates, who had taken passage on board of her at Detroit. They were armed with navy revolvers and hatchets. They subsequently captured the steamer Island Queen, and scuttled and sunk her. They then steamed towards Sandusky, but afterwards returned to Sandwich, where the vessel was seized by the Canadian authorities.

Washington, September 20th.—Yesterday Sheridan attacked the rebel forces under Breckinridge and Early near Bunker Hill, and fought a hard battle all day. A brilliant victory was won by our forces. The enemy was driven over twelve miles—2,500 prisoners were captured, nine stands of colors, and five pieces of artillery were taken. The rebel killed and wounded were left in our hands. The rebel Generals Rhodes and Gordon were killed. Four other rebel Generals were wounded.

Stanton.

The latest news from Petersburg corroborate the previous report that the rebels were about to evacuate that place and retire to Richmond. Several important changes are about to be made in the diplomatic corps. H. J. Raymond of the New York *Times* is reported as the next Minister to France, and Mr. Chase is to be sent as Minister plenipotentiary to the Court of England. General Binney has been shelling Petersburg in retaliation upon the rebels in firing on our pickets. It is reported that great damage was done the place, as the firing was kept up briskly for several hours.

The most extraordinary portion of the news, is the fact that the French troops in Mexico have got mixed up in this war.

It appears that a force of French troops were about to attack Matamoras, and were met by Cortinas with a large body of Mexican Nationals, who caused the French to retire in disorder—while the battle was going on a Rebel colonel, Ford, arriving with supplies for the French, took a hand in the fight to help the French—a Force of Federals, consisting of the 91st Illinois, hearing the firing, hastened to the place and drove the French and the Rebels a distance of five miles.

Don't Take our Paper.—A Poet whose name we have forgotten, says and he says truly:—He as takes what is'nt his'n, when he's cotched is sent to prison."

The truth of these lines we desire to impress on the minds of those who take the copies of our paper placed on file at our office in the Pavilion. We distribute about three thousand copies of the *Daily Fair Press* gratuitously, each day, and would cheerfully print more if the public or our patrons required it; and we must say that it is not high-toned, honest nor decent, to steal the few copies we save for our files. We hope such a hint will prevent a repetition of the annoyance; if it does not, we'll invent a machine that will put a black mark on the nose of him who thus prefers to filch what would be cheerfully given if asked for at the proper time and place. "Beware of the dog."

An Amorous Æronaut.—Late French papers tell us that while Mons. Goddard was recently inflating his monster balloon, he amused the audience by sending up an inflated figure of a man—a perfect resemblance, of natural size. The little æronant was soon lost to the sight of the crowd, but subsequently descended near the open window of a lady who was engaged at her toilet and whose isolated mansion was supposed to be safe from any prying eyes. While thus engaged she was surprised by the apparition of a man who suddenly entered the window, unannounced, and moved towards her. In her fright, she could only utter an exclamation of terror as she pushed the apparition from her, which immediately rolled under the bed. The screams of the lady quickly brought her husband and two or three servants to her door, armed for a fight. She could only point beneath the bed with an intimation that a man was there. One of the attendants cautiously approached, and catching the intruder by the leg, drew him forth from his concealment, when lo! Monsieur Balloon, no longer held down by the bedstead, raises himself erect, swells out, and rises majestically to the ceiling, to the immense amusement of the spectators; while the poor jealous husband slinks away, sword and all, heartily ashamed of his causeless wrath.

The Lincoln Pen.—About four hundred persons have placed their autographs in a book kept for the purpose at the Pavilion, and paid each one dollar, as contributors for the "Lincoln Pen," a superb gold representation of a goose quill pen, in which thirty fine diamonds are set as an embellishment. This beautiful article was donated to the Sanitary Fund by a manufacturer in this city. The money collected from the signers enrolled in the book, will be forwarded to that Fund when the pen shall be sent to the President.

A Crash.—The freshly erected cupola crowning the Church of the Transfiguration at St. Petersburg came down on the 18th ult. with a terrific crash. The loss of life would have been comparatively limited had not crowds of townspeople forced an entrance into the edifice beyond all control from the police or military in immediate attendance, The concussion created by the falling dome in a short time brought down the whole structure, overwhelming several hundreds in the ruins.

Another Novelty in Quartz Crushing. Rix, Logan, Small & Co., have set up in a room alongside our printing office at the Fair, decidedly the most novel of all the novelties in quartz crushing machinery, which they call a trip hammer crusher. It is something in the manner of a trip hammer that the crushers of this ingenious machine operates. To describe this machine were as impossible as to paint a sunbeam or describe the feeling of love. The machine consists of a central iron beam about two feet in length, something like the walking beam of a steam engine, to each end of which is attached by a pivot bolt a square faced hammer with a curved iron handle. This beam, set in motion by a wheel and belt, bring the force of these hammers alternately in contact with a post, curved so as to admit them to just pass in the circle formed by the revolution of the beam, till they arrive at that point where their own weight causes them to fall upon a die with an immense force, sufficient to crush the hardest rocks at a single blow. These hammers revolve at a velocity of eighty times in the minute, within a circular iron covered frame, to which a most ingeniously contrived hopper is attached; the size of this iron box is but thirty inches in diameter, and the weight of each hammer forty-five pounds, the face of each being three inches by five. With this very simple arrangement a one-horse power engine can crush five tons of rock during an ordinary day's work. There are some contrivances about this machine which deserve the notice of practical men—such as the method of feeding the rock to the hammers; the cleaning the crushed rock from the die, which is done by means of holes around—the crushed rock passing on to a sieve, through which none but such as is fine enough for the amalgamating pans can pass, the remainder, by means of a very novel form of an elevator, is repassed under the hammers till crushed fine enough. This machine, which works like anything rather than a quartz crushing mill, is very compact in structure, and we are informed cost about $1,000. Roper's caloric engine runs this machine, in addition to our printing press, a circular saw, and a large size Stannard's rotary lift and force pump; this engine is only two horse power, but it performs an immensity of labor.

A Cheap, Simple and Perfect Pump.—Among all the pumps on exhibition at the Mechanics' Fair—and there are a legion of them—for simplicity of construction, ease of motion and effectiveness, there are but few that excel M. D. Laswell's pump.

This plain, black painted, iron pump, of the old fashioned long handled form, by a very simple arrangement of an air valve below the water, enables a child to raise a very large stream with scarcely an effort. By the merest movement of the lever handle, its extreme end not moving more than three inches up or down, a stream of water the full size of the nozzle of the pump is delivered in such a continued flow that it is as clear and as solid as an icicle. There is no flutter, or break, or splashing, to mark the length of each stroke but one solid continuous stream, such as no other pump on exhibition delivers.

These pumps—so easily fitted in well-holes, so cheap, and requiring so little pressure to work them—are just the things for farmers who have to irrigate their lands. A five-feet windmill would be sufficient to work half a dozen of them, which would raise water enough to irrigate 1,000 acres. To families who use well water, this pump offers the advantages of cheapness, durability, simplicity of structure, and power. The specimen on exhibition at the Fair, might pass unnoticed by many, in consequence of its unobtrusive appearance, but a trial of its powers will satisfy any one that it is all we say of it.

A Vein of rich iron ore has recently been discovered at Walnut Grove, N. J., and which is eleven feet wide. A portion of it runs along the surface of the ground, and from appearance can be mined for at least two years without the use of machinery. The ore contains about eighty per cent. of iron.

Gold Mining in Great Britain.—A writer in the *London Mining Journal* appears to think that the gold fields of Great Britain are deserving of more attention than has hitherto been devoted to them. He thinks it strange that they should have been digging and delving after gold in Australia, New Zealand, and California, and neglected looking after their own gold fields at home; especially after a prospectus has been put forth by a well known and reliable company, in which it is stated that 788 ounces have been obtained from 1 ton of ore, that 909¼ tons of ore have produced 7,148 ounces of gold, all of which has been sold to the Bank of England. Now, if such results can be obtained from the quartz rocks of Wales, why, asks the writer, should not like results be obtained from similar rocks in England? The writer claims that the silicious rocks of several districts, and known to be impregnated with the precious metals, both gold and silver, and thinks the only reason why they are not made to pay is the lack of experience and knowledge in treating the ores.

The Whole Process.—Hopkin's novelty Quartz Mill and Amalgamator on exhibition at the Fair, performs the whole process of crushing the rock, amalgamating the metals and forming the bar of bullion, so that those curious to know how the gold and silver is obtained from the rock may have an opportunity of witnessing the interesting process without taking a trip to the mountains. On Saturday Mr. Hopkins obtained quite a large bar of bullion from a quantity of ore from Aurora, much to the satisfaction of the owners of the claim from which it was taken, and to the interest of a crowd of visitors who watched the process to completion.

The Wide West.—The Wide West commenced crushing from their old vein, recently re-opened in their upper chamber. They will make a two weeks' run before cleaning up. The Superintendent writes that the rock is improving, and hopes to realize $60 per ton. After this cleaning up he expects to be able to keep the mill running full time. It is now running only during the day.

The Blue Lenge, El Dorado, are down with shaft No. 5, 102 feet, and commenced drifting last week; they also started up the mill on rock from this shaft, which is in the regular "blue ledge," and will make a ten day's run before cleaning up. The Superintendent writes encouragingly with regard to the appearance of the rock.

The Overland Mail has resumed its regular trips. The stations have been rebuilt, and station-keepers, stock and provisions distributed along the route.

The Postmaster of this city, gives notice that all letters will hereafter be sent Overland, unless otherwise ordered by their writers.

The Sanitary Fund has realized over $1,800 from the fees derived from visitors to the Camanche. The collectors at the gates have recently been furnished with a small card, just the size for a gentleman to tuck in his vest pocket, which they present to the visitors as they pass in, on which is printed the measurement and weight of the most important parts of the Monitor.

Lusus Naturæ.—The Stockton *Independent* says there is a "Side Show" at the Fair Grounds in that city, which consists of a ten-toed ox, a three-legged bull calf, a three-legged dog and the celebrated upright game cock. Of all the curious freaks of nature these cap the climax, and their equal is rarely to be seen.

Heat and Light.—If a body, such as a piece of iron, be heated and allowed to cool in the open air, the heat gradually passes off from the surface in straight lines, in the form of rays, in the same manner as light proceeds from the candle or the sun; this is called radiant heat. Radiant heat is supposed to move with the same velocity as light; that is, at the rate of 192,000 miles per second.

Treasure Arrived.—The steamer *Sierra Nevada* arrived Monday, from Portland and Victoria, bringing $205,000 in treasure, the mails, and a large number of passengers.

[From The Daily Fair Press of September 21st.]

THE LESSON OF THE AGE.

An American citizen whose heart is warmed with the emotions that characterize the patriot, must feel proud at the progress his country has made in all the arts, sciences and manufactures, during the comparatively brief period of its existence, and pain intense at the thought of the dangers which peril the continuance of those free institutions that have caused this glorious progress, and made America the leading nation in the world's civilization. The experiment we have made before the world, that men are capable of self-government, has proved so successful that crowned monarchs, fearing the progress and spread of the doctrine that all men are created free and equal, have conspired to destroy the grand monuments of Republicanism reared on this soil, and view with satisfaction the fearful internecine strife now raging between Right and Wrong, between Freedom and Slavery. But laying this deplorable view of the subject aside, what a matter for pride and rejoicing is all else connected with our country's history and progress. When the independence of the original thirteen States was first achieved, on the records of the whole civilized world not more than one thousand inventions were entered; within the past sixty years, only, more than sixty thousand inventions have been recorded at the patent office at Washington. Inventions that have revolutionized the ideas of the world in the arts, sciences and manufactures, as much as our free institutions have revolutionized the thoughts of men in the theory of government. The steam engine has here received its greatest improvements and most various application to human industry. The electric telegraph is peculiarly an American institution, while sawing, planing, turning, and agricultural machines, have won the prize for American genius, against a world of competitors. The sewing machine, that has made millions of homes happy by rendering woman's toils lighter, is another monument to American genius, while look at the objects at the Mechanics' Fair, a peculiarly local exhibition. Here, where a dozen years ago the wisest of men discarded the idea of effecting a permanent location in a district of ever moving sand and rugged rocky hills, we find laid out one of the finest cities in the United States, crowded with more than 120,000 of the most vigorous, energetic and enterprising people in the world—whose intercourse and trade ramifies to the Orient and the Occident; to whom India, China, Japan and the Islands of the ocean on the one hand pay tribute of their products, while on the other the trade and commerce and markets of the whole of Europe are governed by the supply of her staples of gold, silver, grain, wool, and wine. Look around the huge Pavilion crowded with the products of our soil, our mines and manufactures. Is there a single branch unrepresented? If in twelve years we have accomplished so much while overcoming the prejudices and a yearning for home that distracted the love of the majority between the new State of their adoption and that of their birth, what may not be expected of a country so blessed in climate, soil, products and people as California. The lesson of the age to us teaches fidelity to ourselves, our duty, and justice, and the imagination cannot reach the limits of our progress. But if we betray the trust reposed in us, by destroying the cause of country and humanity, our prosperity will be blighted and progress delayed. The country we possess was the possession of our neighbors; who by petty wars and subdivisions of their country prevented the development of its resources. Let this be the lesson of the age to us; let their example be a beacon to guard us from foundering on the shoals of division. Let us never forget that united we stand, divided we fall; and remembering this, let us battle for the Union.

To Prevent Milk from Turning Sour.—To each quart of milk add fifteen grains of bicarbonate of soda. This addition will not affect the taste of the milk, and it promotes digestion.

"Multum in Parvo," is a most appropriate expression to apply to Mr. Fauchery's miniature turbine wheel which he exhibits at the Pavilion. Last evening a two stamp battery, weighing 250 pounds, was hitched on to this little wheel, which walked off with the load quite easily, and at the usual speed for such work. This is quite a feat for a wheel 2½ inches in diameter. It is a double turbine, of Mr. Fauchery's invention, and is driven by an inch water pipe, with 200 feet head. The driving shaft is only 12 inches long. The wheel makes 5,000 revolutions a minute. The power is taken off from the driving shaft by two pulley's of about the same diameter as the wheel, and the speed reduced by intervening pulleys and gearing.

Hudson's Pump—The great improvement on a most useful machine by Mr. Hudson and one which gained for him the silver medal at a previous Mechanics' Fair, is well illustrated by the splendid pumps he has on exhibition at the present one. The peculiarity of this pump is that while it has more valves than any other, enabling it to combine the powers of the rotary-lift and force pump principles, it is so arranged that it is almost impossible for it to get out of order. These pumps work so easy that a child can raise a respectable stream of water from a depth of 100 feet and force it up an hight of 100 feet or more. The beautiful working model on exhibition at the Fair is well deserving of notice.

An Excellent Return.—Mr. Joseph Healy has shown us the certificate of a working assay of ten pounds of rock from the Aspinwall Company's lode, Amador District, Reese River, giving us a result of $8.26 in gold and $240 in silver. The bar accompanying the certificate is a handsome guaranty of the quality of the ore. We understand the pay quartz of the lode is now developed two feet in thickness at the depth of forty-five feet. The members of the Aspinwall Company are in earnest, and are bound to prove the ledge.

Another Rise.—The California Navigation Company, raised the rates of fair between this city and Sacramento to $3, immediately after the late disaster to the Washoe. We understand that another advance was made on Monday last, to $5, which we presume is to be the regular rate in future—or until another opposition boat makes its appearance on the river.

A Meteorological Phenomenon.—A heavy mist loaded with dust, and accompanied with a fierce, hot sun overhead, occurred on the coast, below Point Concepcion, on the afternoon of Sunday, the 11th September. The thermometer rose to 90 degrees in the shade, without a breath of wind, and it is supposed it was from the tail end of a Colorado or Mojave sirocco, which had got blown out as it drifted towards the coast. It was attended, we are informed, with great heat and lassitude.

Buy a Ticket.—Visitors at the Pavilion should bear in mind the fact that the beautiful and costly French carom Phelan billiard table, there on exhibition, is to be raffled off at the close of the Fair, and that Mr. Hughes has donated the entire proceeds to the Sanitary Fund. A dollar paid for a ticket is a dollar given direct in aid of the sick and wounded soldiers of the Union.

Another Steam Fire Engine, for the Tigers, No. 14, arrived on the steamer Golden City. It is similar to the one on exhibition at the Pavilion, and by the side of which it will be placed on exhibition, in a day or two.

City Valuation.—The assessment rolls of this city, which have just been completed, show a valuation of real estate at $47,292,904; and personal property at $33,433,261, making a total of $80,738, 164, as the property valuation of San Francisco.

The Oldest Bell in America is to be found in the Catholic chapel in the village of St. Regis, on the St. Lawrence river. It was taken from Deerfield at the period of the French and Indian invasion, 1704, suspended on a pole, and carried by Indians through the wilderness to its present location.

New Books.—Among the long list of new books received at the extensive establishment of A. Roman & Co., 417 and 419 Montgomery street, is the most valuable work on metallurgy ever published on the Pacific coast—Knistel's great work on the process for extracting gold and silver—containing the recent discoveries in this important branch of science, with details of tests, descriptions of ores and apparatus, written in terms so plain that and one can understand them—price $6; every miner and mill owner, and those interested in mining, should possess one of these books of reference.

Funo Fano, a Chinese merchant of Canton, now in this city, has entered his autograph signature in the book kept at the Pavilion for that purpose, as a contributor to the "Lincoln Pen." The Chinamen are contributing quite freely to the Sanitary fund.

Hanscom's Crusher.—The engraver is now employed in executing a fine drawing of this modest, but very important machine. It is really one of the best inventions brought out at the present Fair.

Revival of an Old Art.—Nile & Kollmyer, ornamentors and gilders, in the Russ House Block, have revived the ormolu style of gilding, so much in vogue in the middle ages. They exhibit a number of elegant articles at the Fair, in this ormolu and other methods of gilding, which are beautifully done. They have a good and established reputation.

Quartz Mill Burned.—The Hinchman Mill, Placerville, was burned on Thursday night. This was one of the finest mills in the State and was insured for $10,000. The fire was the work of an incendiary.

Knowledge is Power.—If you desire to have this power, and require any description of book on Mechanics, Engineering, Mineralogy or any other ology or science, just send your orders to H. H. Bancroft, 609 Montgomery street, who has the largest stock of such books in the State.

It Pays for Itself.—Dunbar's Patent Self-Adjusting Piston Packing, on exhibition at the Pavilion, is one of the most economical of all the modern appliances to steam engines. It is equally good for new or old cylinders. No engineer or machinist should leave the Fair without seeing them.

Preserve Your Paper.—As many important articles are inserted in this paper which do not find their way into any other journal, parties receiving copies will do well to file them, as oftentimes reference to a single paragraph may prove of great value.

Mr. Jacob Shew, at his extensive photographic gallery, 315 Montgomery street, shows at the Fair, what he can do in the art of which he is such a proficient. The pictures in his gallery are executed in the very highest style of the art.

New Gunpowder.—A correspondent mentions that a new kind of gunpowder, manufactured by the use of saw-dust, is being used with success for mining purposes at Dutch Flat. Will some one give us more light on the subject.

How to Stop a Leaky Roof.—The season is fast approaching when it will be essential to have tight roofs. This may be easily obtained and all leaks stopped by attending to the following directions from a correspondent of the *California Farmer:*

Cover the roof with canvass of some kind, boil coal tar till it lays still in the kettle; make a swab of a piece of sheepskin with wool on, and swab the tar on hot; give it two coats and the job is done. I had a roof that leaked, four years ago last fall; I simply covered it with drilling, and the next fall I swabbed two-thirds of it with pine or common tar, and the other third, as an experiment, I covered with coal tar as above; the result was that the part covered with pine tar, all rotted and came off in one year, while that portion covered with coal tar, is apparently as good as ever.

Excellence and Economy.—These two important qualifications are combined in the beautiful photographs taken by Beardsley & Swasey, No. 205 Third street, near Howard; a fact which may be proven by a single trial.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Sept. 24th, 1864.

The Stock Market has shown considerable strength since Saturday last, and almost every share dealt in recently, has been well maintained. The aggregate transactions have been, however, smaller than those of last week. A better feeling is discernable and most stocks are strongly held in expectation of a further rise. The average yield of the productive claims of Nevada Territory, is now larger than for some time past, and, from all that we can learn, the probabilities favor a still greater production tho ensuing fall.

Receipts of Treasure from the interior and north coast during the past ten days exceed *two and a quarter millions*, three fourths of which sum came from California and Washoe.

The money market is easier and the available supply of capital continues to augment. Loans upon stocks are made with rather more facility, and if the margin from current market value be ample, 1½ per cent. per month is the current rate in Bank. Outside negotiations are reported at higher figures, but these are usually effected upon securities of less certain value.

Legal Tender Notes advanced from 44¼ to 46½, and closed last evening at 46 bid; $22,000 were sold.

Gould & Curry has been less actively dealt in, but did not fluctuate materially; 52 feet were sold, receding from $1,125 to $1,080, steadily advancing to $1,170, and closing yesterday, at $1,140. No new developments have been made the current week, and the condition of the mine is substantially the same. The regular dividend of $50 per foot will be declared the ensuing month.

Savage is in more favor and advanced from $1,200 to $1,325; 8 feet changing hands. At the close $1,250 is bid, $1,350 asked. The product of this claim for the month will reach some 4,000 tons of ore, and it is said that the Company have already a larger surplus in their treasury than will be required for the payment of the next dividend.

Potosi has been sold to the extent of 23 feet within the range of $705 and $670, and is now held at $710. The suit of this Company with the Bajazet is still pending before Judge Mesick, but it is presumed that a conclusion will be reached in a few days.

Yellow Jacket is in decided request and rapidly advanced from $400 to $570, selling on Thursday at $700, and last evening at $660. Reliable information touching recent developments in this claim are not yet at our disposal, but it is said that important discoveries have been made.

Challenge continues to be well held and is very steady at about $665 bid; 5½ feet were sold during the week at from $650 to $660. A recent crushing of 135 tons of ore at the Ogden Mill, (from the south mine,) yielded some $83 per ton. In addition to this mill, the Rhode Island, Rigby & Co., the Summit, and Laird & Co. mills, are now employed by the Company and will be able to reduce about 100 tons per day.

Belcher remains inactive, but is in rather more favor at $650 bid The affairs of this Company are thought to be assuming a more promising condition.

Crown Point is meeting with more enquiry, but is rarely offered. Overman was sold to the extent of 16 feet at $160.

Ophir has been very actively dealt in and 68 feet were sold, declining from $325 to $295, then rallying to $340 and now held at $325. So far as we can learn the present receipts of the Company are sufficient to meet their current indebtedness.

Hale & Norcross fell from $300 to $230, rose to $250, declined to $240 and closes at about $240 b. 30. Two drifts are now under way from the 500 feet and the 545 feet levels, and are running south.

Sheba is steadily maintained. 51 feet have changed hands, declining from $77½ to $70, advancing to $76 and closing at $70 bid. We incorrectly stated last week that "40 tons of ore crushed at the Company's mill had yielded $19,000." The product of this first crushing was $7,000 and from 30 tons of ore.

Imperial has obtained more favor and rose from $142½ to $155 buyer 30, selling yesterday at from $147 to $155. 167 shares were sold within this range. This Company's present condition and their prospects for the future are thought to be flattering. Receipts of Bullion are larger than formerly. A dividend of at least $7½ per share will be declared for the current month.

Wide West was less active, receding from $27½ to $25 and closing with sales at $24. The last crushing of 35 tons of ore yielded about $49 per ton.

North Ophir advanced from $32½ to $50 and then sold at $40 seller 60. An impression prevails that this stock has been concentrated. $65 is bid at the close.

Burning Moscow has been much more active than usual and 528 shares were sold, declining from $27½ to $25 and advancing to $32½, at which latter rate sales were made yesterday.

Nevada (J. G.) is in much better favor and 223½ shares have been sold, steadily advancing from $28 to about $40. The prospects of the company are more flattering.

Lady Bryan fluctuates but little and 605 shares changed hands within the range of $5½ to $6¾.

Utah was sold at $5@$6. The assessment of $5 levied on the 3d inst. has been rescinded and one of $12.50 levied in lieu thereof.

Antelope was sold at $20; Sierra Nevada at $20; Santa Rosa at $20; Real Del Monte at $19; Baltimore American at $25; Baltic at $23; and Buckeye at $6¼.

Spring Valley Water Company is enquired for at 30 per cent. on amount paid in. California Steam Navigation Company is in request at 60 @ cent. bid, and San Francisco Gas at $85½.

The total sales of Stocks and Legal Tender Notes since Saturday last amount to $217,248.50.

Amount of sales.....$32,620 00

A Challenge.—Mr. Varney, the inventor of the famous amalgamating pan, which bears his name, has challenged any of the exhibitors at the Pavilion, to a trial test of the working power of their pans with his for the amount of $1,000. The method of trial suggested is to take a certain amount of sand containing a known quantity of gold, and the pan collecting the most of this known quantity, to be declared the winner. Such a trial would certainly be most interesting and useful, and we trust that this sensible proposition of Mr. Varney's will be made the basis of some action of the kind. Indeed, we understand that the Committee on Mining Machinery, contemplate arranging some public trial of the kind, in which all may compete.

The Washoe.—Orders were received on Tuesday evening by Capt. Harrison, for one of his wrecking pumps, to pump out the hull of the steamer Washoe. The Andrews' Centrifugal pump, with engine attached, which has been on exhibition at the Pavilion, was accordingly taken about noon yesterday and conveyed to the wharf for shipment to the wreck. Before, however, it was placed on board the steamer, a telegram was received by Capt. Harrison saying that the party at work on the Washoe had succeeded in freeing her from water and that the pump would not be needed. We presume from the above that the hull of the Washoe cannot be seriously injured, as she must have been pumped out by a very small pump. We have further learned that the wreck has been removed from the locality where she was sunk, into Sutter's Slough, out of the way of passing boats. She will probably be towed down to this city to-day or to-morrow.

Sudden Death.—Mr. William Fitzgerald, aged 34 years, for a long time employed in the finishing shop of the Miners' Foundry, died suddenly in the shop, at about 8 A. M. yesterday. He went to work, as usual, but soon complained of being faint, called for a glass of water, and died in about fifteen minutes. A *post mortem* examination revealed the fact that he died of a valvular disease of the heart.

Bloody Tea.—Brick tea is nearly all shipped to Russia. Probably very few people out of China know what brick tea is. It is the refuse and powder of various kinds of tea worked up with blood into cakes looking like bricks.

A New Firearm.—A gun-maker of Paris has invented a new firearm, which has a revolver affixed to the stock in such a manner that the soldier can fire it with his left hand, while defending himself with the bayonet.

CALIFORNIA MADE CRUCIBLES.

In a position at the Pavilion, near the entrance to the right hand artists' gallery, may be found an assortment of crucibles and muffles of California manufacture. They have been offered for sale, to some extent, by several hardware dealers and others in this city. So far as mere inspection goes they appear to be serviceable, and we have never heard anything otherwise with regard to them. It would be interesting, however, if the exhibitor would accompany them with specimens which had been subjected to the furnace, or would furnish visitors and persons interested as to the temperature to which they have been subjected in the process of manufacture, and consequently that for which they may be considered adapted. We shall be happy to communicate any information on that point which may be furnished us.

The wide interest and importance attached to these facts may be inferred from the following paragraphs which we quote from the opening portion of a paper, read by Mr. J. H. Churchill, (now of Front street in this city,) before the American Institute, of New York, in the fall of 1861, upon the subject of "Crucibles and Fire Proof Materials:"

This subject is of the greatest importance to the owners of glassworks, the manufacturers of steel, the assayers of gold, the workers in brass, stockholders in gas works. Proprietors of veins of quartz, or of dry river bottoms, of lime kilns, of clay beds, of magnesia quarries, are all interested. Salt, even, contributes to the general result.

As one instance of it, a recent report to the Emperor of the French, estimates the difference of cost for fireproof materials in making steel, as thirty francs per ton, between that country and England. Another, the cost of working of a quarter of a ton of platinium, for the Russian government, was reduced five hundred fold, by a process growing out of the work of M. Deville, by the use of lime capels, and gaseous fuel.

This valuable paper is given in full in the transactions of the American Institute, published by the State of New York, and we propose to re-print it in the MINING AND SCIENTIFIC PRESS, as soon as we get through with our reports of the Fair.

STAPLE GROCERIES.—Among the numerous extensive business houses, in the line of groceries, which have recently been built up in this city, none is more worthy of mention than that of BOWEN BROS., located at the corner of Montgomery and California streets. These gentlemen are among the pioneers of California business men. They commenced business in Stockton, and for a long period carried on an extensive and lucrative trade in that city. Being ambitious of a wider field of enterprise, in 1860 they removed to this city, where their superior mercantile qualifications and general business correctness enabled them at once to take a front rank in the San Francisco trade. Their superior facilities for purchasing in the Eastern market gave them a decided advantage over most other dealers, and the reputation they have established in this city and throughout the interior, for probity and promptness, has made them a host of friends. Each returning year has added to the expansion of their trade until their present annual sales are probably not exceeded by any similar business house in the city. Interior merchants, who may order goods of them, by letter, can depend upon getting precisely what they send for, and at the lowest market rates. All goods sold by them for the interior are delivered on the wharves free of charge for cartage; while their city orders are always answered with promptness. The speciality of this house consists in keeping staple articles of first class goods, and selling them at remarkably low rates.

DULL AT THE BOISE.—Jonathan Baker, of Amador county, California, (says the Reese River *Reveille* of the 11th instant), passed through here yesterday, direct from Virginia City, Idaho Territory, where he has been since last February. He reports the times very dull there, and that everybody is leaving who can get away—some returning to the States, but the larger portion going to California, Oregon, and this Territory.

MINING STOCKS.

WASHOE DISTRICT.

Name of Company.	No. of feet in Mine.	Shares per foot.	Total No. of Shares.	Incorporate Value.	BID Per foot.	ASKED Per foot.	Last Month'ly Divid'd Paid.	Recent Assessments Per foot.	Total Ass'ts Paid.

CAUTION.—Some of the holders of season tickets for the Industrial Fair are a little inconsiderate in allowing them to be used by their friends; and this practice has extended so far that a large number of them are forfeited daily on being presented at the door by parties who have been thus accomodated. The holders of Season tickets cannot fail to observe the condition plainly printed on the face of the tickets subjecting them to forfeiture if transferred.

GOING TO SEA IN A TUB.—One of the rebel prisoners confined at Point Lookout, recently attempted the feat of the wise men of Gotham, as the means of escape from Uncle Sam's guardians. He procured an empty meat barrel, and managed to get it into the bay with the idea of cleaning it. This was observed by the guard, and no particular notice taken of it. He managed to get it out in the bay with his head within the barrel, but, as fate would have it, after it had drifted some distance in the bay, where the waves became larger, the barrel turned, and he was drowned.

COPPER DISCOVERY.—The San Andreas *Register* says that a new copper discovery at Brunsville, has created quite a stir. The indications of the croppings are excellent. A company has been formed, to prospect it, composed principly of men from Brushville and San Andreas.

THE erroneous notion is entertained by many persons that the population of the loyal States is not so great now as it was at the beginning of the rebellion; whereas the fact is, that it is much greater. The immigration from Europe has been and now is unusually large, added to which is another kind of immigration, namely, that from the rebellious States. Hundreds of thousands of people have fled from the perils and privations of Dixie to share the peace, plenty, and safety in the loyal States which were denied them at home. In addition to these two outside and extraordinary sources of supply, we have the natural increase of population which is always going steadily on. So that, all things considered, there can be no doubt that our population is larger now than it ever has been before, and in fact the statisticians, who "keep the run of things," show this to be the case by their figures.

A RICH LEAD.—The Esmeralda *Union* says: "A quartz lead of extraordinary richness is said to have been discovered in Montgomery District, a few miles from Esmeralda. Our informant, whose reliability is beyond question, stated that out of four hundred ounces of rock from the lead, the owners had taken one ounce and five pennyweights of silver. The discoverers have brought to Aurora six hundred lbs. of the ore, which they intend to crush in large mortars. The owners, who are well known here as men of veracity, say they can scarcely believe their own eyes. The lead is equally rich in every part prospected."

ANOTHER VALUABLE NATURAL PRODUCTION. Mr. A. J. Doolittle yesterday entered among the articles on exhibition at the Fair, a specimen skin of the silver fur seal, of which perfect shoals are to be found along some parts of this coast. These skins from their beauty, and the durability of their fur, we think at no distant day are bound to add another valuable article to the exports from this State. Few persons are aware of the value of the abelone shells exported from this coast to China, Europe and the Eastern States, yet these shells, until within the last two or three years, were considered as valueless. So it has been with these beautiful seal skins. We think it would pay to prepare a number of these skins and send them as samples to foreign markets; particularly to London and China, where such articles are in great demand for various purposes.

THE PROPER CREDIT.—The bridle on exhibition at the Pavilion, and donated to the Sanitary Fund, was contributed by Sheriff McEwen, of Contra Costa county, and not by Mr. C. B. Porter, as stated in some of the city papers. Mr. P. merely acted as agent for his friend in offering the donation to the Commission, and desires that the credit for the gift should be given to the party to whom it properly belongs.

[Thursday, September 22d.]

The crowd at the Pavilion last evening was somewhat diminished by the political demonstrations on Montgomery street. The daily receipts now average about $800. The skating pond yesterday realized $50 ; the cheese $50 ; Old Sanitary swallowed $12½, making $106.50 for the Fund yesterday. Tuesday's receipts amounted to $108. Fruit and many other articles still continue to come in for the benefit of the Fund. A number of wholesale fruit merchants, at the various markets in the city, every morning select the very choicest of their stock, and keep the tables at the pavilion supplied with every kind of fruit, which is sold during the day for the benefit of the fund. Crane & Brigham have sent a large package of Fish's Hair Restorative for the same purpose, with the promise of keeping up the supply as fast as it is sold. To-day a large assortment of superior dried fruits will be received. This department of the Fair is under the direct superintendence of Mr. Perkins, of Oakland, who is indefatigable in his efforts to make it as profitable to the fund as possible.

The Committee of arrangements of the Fair have extended a general invitation to the pupils of all the public schools to visit the Fair at any time the superintendents may fix—free of charge.

Gen. McDowell and staff visited the Pavilion last evening, and expressed themselves highly delighted with the Exhibition.

Among the new entries made yesterday was an elegant monochromatic drawing by Mrs. A. J. Doolittle, of this city. Aside from its artistic merit, this drawing is a picture from real life. The poor dead drunkard, half buried in snow, bottle in hand, and with his faithful dog by his side, was found in just that position by his wife, who lived in the miserable cabin near by, and who was one of earth's angels out of her proper sphere. The occurrence took place some few years since in the State of Michigan. The miserable man had almost reached the threshold of his dwelling to perish thus miserably, and he handed down to posterity in pencilled picture, as a warning to his fellows, who taste the wine when it is red, which always biteth like a serpent. This picture may be seen near the upper left hand side of the central picture gallery.

Mr. Doolittle also entered at the same time a California silver seal skin, taken from an animal caught in Mendocino county. Some practical remarks, suggested by this item, will be found elsewhere in our columns to-day.

In our notices of Tuesday's entries we neglected to mention that of the magnificent hose carriage of the Washington Hose Company, No. 1.

Blake's Stone Breaker.—One of the most noted pieces of successful machinery exhibited at the Fair is Blake's Stone Breaker, for crushing rocks and boulders, concentrating ores, etc. This machine has a very high reputation in England and the Eastern States, where it has been thoroughly tested, and become very popular. It is also working with perfect success on this coast. There are still thousands of places in our mines, however, where the jaws of this ponderous machine would perform a great work of economy if introduced. By calling at the office of Prof. Blake, 706 Montgomery street, our readers will receive full and correct information concerning the Breaker.

A Grave Subject.—The examination of a coffin is generally the parent of a whole progeny of sad, sad thoughts, though since the improvements introduced in the "garniture of the grave," this effect has been very much lessened. A person may examine those beautiful Patent Metallic Caskets, at the store of N. Gray, 641 Sacramento street, with feelings of admiration rather than repugnance. For the purpose they are intended they are as beautiful as art and taste can make them. When Time's relentless hand strikes those we love or respect, and the grave must hide them from our sight, one of these caskets, and the services of Mr. Gray, accomplishes the sad duty with less pain than would otherwise attend such sad rites.

Home Made Safes.—The beautifully finished, burglar, powder and fireproof safes, manufactured by Kittredge, 6 and 7 Battery street, are the very perfection of such invaluable articles. Plain and solid ; there is no useless ornamentation about them, to increase their cost, without adding to their efficiency. We honestly believe that for all the purposes for which such safes are required, those manufactured by Kittredge are superior to the not unfrequently overlauded imported article. These home made articles have successfully passed through tests which, had they occurred to foreign manufactured safes, would have been recorded in one half of the newspapers in the Union as triumphs of mechanical skill over fire and robbery. But these safes are made for such purposes, and their performing their office is not considered remarkable, owing to the manner of their construction. Kittredge also builds bank vaults on an improved method, which is highly spoken of by the firms who have employed him ; as well as bridges, balconies for buildings, and does a general blacksmithing business.

California Made Powder. — We call the attention of those interested in mining, quarrying, contractors, and the public generally to the superior quality of powder exhibited at the Fair by the California Powder Works, which in all that constitutes a good article of blasting powder far excels the best imported, while in point of cost it is much the cheapest. In our opinion, a company possessing the enterprise to expend the necessarily large amount of capital to manufacture such an indispensable article as gunpowder — a manufacture attended with so many risks and dangers — if they furnish a really good article, as do the California Powder Works, are entitled to every encouragement, at the hands of the people of the Pacific Coast.

The many mining companies and large contractors who have tried this powder for blasting, report that it exerts greater force than the best imported powder—nor is there anything extraordinary in this, when we take into consideration that a voyage around the Horn must deteriorate the quality of the powder, and deprive it of much of its force—a loss not incurred by that made in our own State and to be procured fresh from the mills. All orders sent to the office of the Company, No. 318 California street, San Francisco, will be promptly attended to.

Suggestive.—One of the most suggestive exhibitions at the Pavilion is that made by Mr. Jarvis Jewett, of Palmer's Artificial Limbs. Palmer's artificial legs, arms and hands, are not equalled by those of any other manufacturers in the world, and unhappily at the present time, there is such a demand for them that a heavy company has been formed to carry on their manufacture on the largest scale. These limbs are made of willow, over which is tightly drawn raw hide, which is subsequently enameled, thereby giving it the beautiful flesh like appearance which they all present. The limbs are so constructed as to imitate most perfectly the movements of the natural joints. Mr. Jewett, the agent of the manufacturers, may be found at 629 Washington street.

Photography applied to Machinery.—One of the most useful purposes to which the Photographic art has been applied, is to the representation of machinery. By it the most intricate piece of machinery may be so perfectly represented as to convey almost as intelligent an idea of any work of that description, as the machine itself could do were it present. Our attention has been called to this fact from the exhibition at the Pavilion of a large number of photographic representations of various machine tools manufactured by Wm. Sellers & Co., of Philadelphia, and exhibited by Mr. David Stoddart of this city, who is agent for the manufacturers. They may be seen just across the avenue which passes our press.

Sanitary.—The magnificent basket of fruit, from San Joaquin county, now on exhibition at Col. Warren's Stand in the Pavilion, will be sold in a few days for the benefit of the Sanitary Fund.

The Telegraphic reports of the glorious victory in the Shenandoah Valley, as given, in brief, last evening, are fully confirmed by additional reports this morning. The number of prisoners is now estimated at 3,000. It was a complete route of the rebels, and our forces are in hot pursuit of the flying fragments. The draft is proceeding quietly in all the States, and in many districts the most vigorous efforts are being made to fill up the quotas by volunteers before the drafted men are mustered in.

The *Bulletin* has the following telegraphic headings :

The Draft is proceeding quietly in Washington.

The Lake Erie Business—Fear lest Rebels steamers may play mischief on the Lake, and perhaps lay Buffalo under contribution.

Rebel surprise of a Schooner in Warwick River, near the James.

Gen. Grant back to Headquarters of the Army of the Potomac.

Report that a Rebel Force of from 4,000 to 6,000 Men, near Baton Rouge, La., are Prepared to Surrender to Gen. Herron, if the General Officers shall Receive an Unconditional Pardon.

Affairs in Arkansas.

Later From Europe.

The English Press on the Prospects of an Armistice in America.

Reports at Lloyd's of the Ravages of Confederate Cruisers.

Rumor that Austria is about to Recognize the Kingdom of Italy.

Napoleon's Health said to be in "in a very Unsatisfactory State."

The Game Season.—Passing through the market yesterday, we noticed the sudden reappearance of quail, plover, curlew, venison, antelope and other game offered for sale, and was at once reminded that the game season had commenced and war declared by our hunters and sporting friends against game generally. We saw an article the other day in *Wilkes' Spirit of the Times*, in which William King, Esq., (who is acknowledged to be the best shot in America,) recommends the Hazard Powder as being the best in use, and offers to shoot Hazard's "Electric," against any other powder manufactured either in Europe or America. We prefer the "Electric" for field shooting, but for geese, brandt or duck, we prefer Hazard's ducking and sea shooting powder, which we know to be good and can be had at any of our gun stores.

More Work in Prospect.—There is a pretty good prospect of hot work soon in Virginia. Gen. Grant has returned to the front, and it is said he has recently been re-inforced by about 100,000 volunteers. The draft commenced on Monday last, and it is but fair to presume that he will soon receive 50,000 men from that source to distribute among his veterans. With this enormous increase of force there can be but little doubt that Gen. Grant will soon be master of Richmond, if not of the whole army.

Important Home Manufacture.—The manufacture of cordage is one of no small concern in this city, and if we can believe our own eyes, and the testimony of those most directly interested, Messrs. Tubbs & Co. are now turning out Manilla rope and cordage far superior to anything ever imported here. There is no question about the superiority of their work, and the material obtained by them is of the very best quality. Their display at the Fair is hardly equalled by that of any other assortment of home manufactures. Fifty hands are employed at the works, located at the Potrero, which turn out 2,000,000 pounds of cordage per annum ; enough to hang all the traitors in the country, bind up the rebel army and the great wounds of the nation.

Fine Specimen of Manufacture.—We would call particular attention to the showcase of gentlemen's shirts, exhibited at the Fair, by Mrs. E. Morris, No. 13 Montgomery street. No gentleman of taste should fail to examine these fine articles of adornment. Mrs. Morris has also a model of a Folder on exhibition, of her own invention, for which she is about to take out letters patent for the United States.

[Friday, September 23d.]

The Industrial Fair still continues the chief attraction of the day. The clatter of machinery, the hissing of steam and air, and the almost constant rush of water, as it pours like miniature cataracts, from the various pumps on exhibition appear to form even a greater attraction than the really splendid music that is discoursed from the gallery. The five stamp battery, which knocked its foundation to pieces a few days since, was again put in order last night and went off beautifully under the motive power of Redding & Hansbrow's Hydrostatic Engine. Moore's Crusher, is now run a short time every evening, to show its capacity and speed. This machine has such a voracious appetite that it is impossible to find quartz sufficient to keep it running for any length of time with its full feed.

The receipts of the exhibition, thus far must be most satisfactory to its managers, and the Association under whose auspices it is being given cannot but feel highly gratified at the substantial appreciation which the public has thus evinced of its efforts to advance the mechanical arts and general productive enterprise of the State, by the grand display at the Pavilion. The exhibition will probably close a week from next Saturday. Parties from the interior who are intending to visit the Fair, should lose no time in making their way thither, and residents in the city who have not already visited the Pavilion, should do so immediately or they will lose the opportunity of witnessing an exhibition of the rarest interest, and the like of which may not again be seen for years.

Crushing Speed.—By invitation of the agent of Moore's Rotary Centrifugal Crusher, at the Pavilion, we yesterday timed the crushing of fifty pounds of ore, which occupied the machine just *thirty-five seconds*, or at the rate of about two and a half tons per hour. The speed of the crusher is so great that the ore is reduced to an impalpable powder. It is conducted out of the Pavilion through a sheet iron pipe, *a la smoke*, into a close chamber outside. The rock was introduced in a partially crushed state.

Sanitary Meeting.—Platt's Hall was crowded last evening at the mass meeting of the friends of the U. S. Sanitary Fund. Addresses were delivered by the Rev. Dr. Cheney, Rev. O. C. Wheeler, Secretary of the Sanitary Fund, and Rev. Dr. Bellows. The latter made a most eloquent address, discussing the Sanitary Fund, California, and the approaching election.

Clean Up.—The Wide West Company, cleaned up, last Saturday, after working 35 tons of rock from the large ledge in the upper chamber. The result was a yield of $48.50 per ton. They have now put in finer screws, which will increase the yield of this week's run. They are putting on additional men as fast as they can make room for them, and expect to be able to have rock to run the mill night and day after the present week.

A Superb Series of Views.—The series of views of the magnificent valley of the Yosemite, taken by Mr. C. L. Weed, on exhibition at the Fair, are acknowledged to be the most beautiful ever taken of that marvellous spot—perfect gems of the art of photography. Copies of these beautiful pictures may be had at the gallery of Bradley & Rulofson, Montgomery street.

Try It.—To those who have a good home in the city, a restaurant has no attractions, except it may be for an occasional change ; but to those who have not that home, and desire as near an approach to it as may be obtained, in the eating line, in this city, we would recommend the "Empire State Restaurant," Sansome street, between Clay and Commercial. Don't fail to try it. Neat, cheap, and as good as the best, is the motto of Messrs. Stevens & Wadhams, and that they live up to it, can be testified to by the printers—that most fastidious class of epicures.

At the grand reviews and parades of the French troops, two cries are said to be invariably heard from the ranks : "Long live the Emperor," and "Down with England!"

INTERESTING SCIENTIFIC DISCOVERY.

Professor Brewer and party, connected with the State Geological Survey, returned to this city on Monday last, from a protracted trip in the mountains, near the head waters of Kern River. The result of their trip has been, among other matters of scientific and practical interest, the discovery of a group of mountain peaks in the Sierra Nevada range, one of which is known to be higher than Mount Shasta, and *five* of which it is believed exceed that mountain in hight.

In prosecuting their explorations the party reached a very high elevation, beyond which, and separated from them by an impassible cañon, was a still higher peak. One of the party Mr. C. R. King, returned to Visalia, obtained an escort of United States soldiers, and started for the peak by a new route. He succeeded in reaching an altitude of 14,700 feet, 260 feet higher than the top of Mount Shasta, where he found another some 300 feet higher still, but he was unable to proceed further, and was reluctantly compelled to retrace his steps. This peak is located from 60 to 70 miles nearly due East from Visalia, and between the headwaters of Kern and King rivers.

There is here a large group of mountains—the highest probably on the North American Continent, the existence of which is now for the first time made known to the world by Professor Brewer and party. An interesting feature connected with this discovery is the fact that these mountains abound with an abundance of game, especially deer, and inexhaustible quantities of very superior grasses. Excellent feed for their animals was found up to the altitude of 10,000 feet. Great numbers of bears were also seen.

The general objects of the survey have also been most successfully carried out during this trip. All the elements for a topographical map of the region have been collected. The party have undergone great hardships and exposure. The Professor, who called upon us, and from whom we have gathered these particulars, shows the effects of his exposure in a marked degree. The entire party were for ten weeks without anything fresh, except game and wild onions. The consequence has been very severe upon one of their number, Mr. C. F. Hoffman, who has been brought back in a very exhausted condition, the effects of his extraordinary exposure to the elements and insufficient food. The party consisted of Professor Brewer, C. R. King, C. F. Hoffman, J. T. Gardner, R. D. Cotter, and an escort of seven United States soldiers, under charge of Seargeut Judd, of the Camp Babbitt Cavalry. We are promised further particulars of this interesting trip, which we shall lay before our readers in a few days.

Separating Sulphur from Alkali Waste.—An invention for the recovery of sulphur from the waste produced in the manufacture of soda has been provisionally specified by Mr. Benjamin Jones, of Warrington. He runs hot water, on blue waste, placed in a suitable vessel, and in a few hours he drew off the liquor. He precipitates the sulphur with hydrochloric acid, and then filters and evaporates to dryness. The precipitate is then treated in a furnace similar to that commonly used for producing sulphur from sulphur stone. He proposes to condense the sulphuric acid in a water tower, and collect the sulphur at the bottom.

A New Process for Concentrating Copper Ores.—Valentine & Co., of this city, have on exhibition at the Fair in Stockton, some fine samples of concentrated copper ores obtained by a new process, of which the Stockton *Independent* speaks in very flattering terms. "It is claimed that the process is a great improvement over any system formerly in use for third class ore. The specimens exhibited attract considerable attention, and are pronounced very superior by those acquainted with the subject."

A girl recently advertised for a situation as barmaid or waitress in a refreshment saloon. Among her qualifications for such a position, she says she can cut two hundred and twenty-five pieces of bread, of satisfactory appearance, out of one pound of bread, and butter them with two ounces of butter.

(Written for the Mining and Scientific Press.)

Letter from the Sooke Mines.

Editor Mining Press.—Since my last communication, I have been to the newly discovered Sooke mines, and can speak more understandingly of the prospects there, which, I can assure you, do not come up to that standard of importance at which they are represented abroad. They are principally located on Leech Creek—a small mountain tributary of Sooke River; their junction being twelve miles from Sooke Harbor. The bed of this stream is thirty feet wide at it its mouth, and filled with boulders from the smallest size to those weighing fifty tons; and in the gravel underneath is found the gold. Through this gravel bed, down to the bed rock, would probably average twelve inches. This stream is taken up and staked off, almost its entire length of eighteen miles, and like all mountain streams, diminishes rapidly in width and water as you ascend, until up a few miles, it has hardly the importance of a name. The quantity of water now running, would not exceed two hundred inches; but in the rainy season, it evidently sweeps down with an irresistable force.

At the junction of these two streams, the government has laid out a town, where a few substantial log buildings are being erected, besides several shanties and tents used as stores and whisky shops. This, by the overland trail, is twenty-five miles from Victoria, connected about half way, by stage, and the balance by a mule trail, through a dense forest of pine, not by any means of the first class timber. We took the stage in the morning, each man with his pair of blankets, and rode over a good road for eight or ten miles, then took to the woods a few miles further, over an ungraded road, when we were pointed to a trail and told to travel. We dismounted from the "Concord," and with one accord, and several small cords, we strapped our blankets on our shoulders and like pilgrims, with "staff and scrip," pursued our journey over a rough and rugged road, as far as Loon Lake, where we found a body of deep water, about one mile in circumference and deeply seated in the mountain foliage. Here we found a whisky tent, which, like sutlers' dogs, are always found in the van, and a hunter's camp, which supplied us with venison at ten cents per pound. We struck our fires, took our repast, told a few stories, sung a song or two, and like weary travelers laid down to rest; our bed—the bosom of mother earth; our covering—the broad canopy of Heaven seen through the dark, silent branches above us. We slept like those unused to such fare, and gladly welcomed the approaching day. Four miles beyond, we came to the river, where our journey ended, and our investigations began. We met many on their return, with looks which bespoke disappointment, and anything but encouraging reports regaled us on our journey thitherward, all of which we found, even less than the reality.

I do not propose to overdraw the picture. I wish to speak of the prospects of the Sooke mines, as I would of a man, as I find them, and if the result of my experience, not set down in malice, is of any service, my point is carried.

I visited many claims, and all in fact, as far up as I went, and but a few seemed to be paying largely. I found but one with a rocker, who claimed to have a big thing. Some few had united and been working with sluices, and I think are doing well. I saw a nugget worth forty-five dollars, and one valued at ninety-five. The gold is of the finest quality; but the quantity is limited. Four weeks labor would work out all the claims, and unless gold is found in the almost precipitous banks, all labor will be suspended this fall. Not one-tenth of the claims in the Creek are being worked. They are either worked out or don't pay.

The fall rains are approaching and the condition of the bed for work in the spring, will be worse than ever, as all the sluices and flumes will have been carried away, and the bed again filled up with the worked debris of this season, so that I see no hopes of future success in this section unless further and more extensive mines are discovered. I regret to see so many come here, only to meet disappointment.

The poor results in Cariboo, are sending down hundreds from that quarter; and now let me urge upon all who contemplate coming here, to stay "as they are." If you are in business, stay at home—if out of business—don't come here.

I have no doubt but that in time, greater discoveries will be made on Vancouver's Island, perhaps rich ones; but upon the present, there is little to rely. Steamboat men may be interested, and others, who draw largely on their imagination for facts to sustain the excitement, but whatever it may be in the future, it certainly is not a ten-strike now.

I have no means of knowing how many are engaged in mining; but I should not think fifty would exceed the number. Even the Chinese will not hold on, and where they fail it is generally conceded to be of little account.

On my return from the mines, I took another trail to Sooke Harbor, which led me down the north bank of the river twelve miles. Here I found a town laid out, called Sooke City, consisting of one farm house, three shanties, three Englishmen, three French Canadians, one Jew trader, one colored man and a squaw. The harbor has the shape of an hour-glass the outer bay, upon which Sooke is situated, is in extent five miles by one; the inner bay is three and a half by nine miles, and both deeply imbedded in the mountains, which are covered by a heavy forest. From this point I took a steamer for Victoria—a distance of twenty-five miles. B.

Boiling Water.—At a recent lecture, Prof. W. R. Grove astonished his audience by telling them that there never had been such a thing as boiling water, and never would be; and he showed, reflected upon a screen by the electric light, that what is called boiling, is, in fact, the driving out of air from the water from the application of heat. Expel all air from water and it will no longer boil, in the ordinary sense; and if it were possible to operate on water not contained in a vessel, it might be heated to an intense temperature—more than three hundred degrees—without altering its form. And we are not to forget that the burd nature of the vessel in which water is boiled may have as much to do with the boiling as the other elements in the operation. Then comes the question of the constituent gases; and that apparently indestructible bubble of gas, "that everlasting bubble," as Prof. Grove calls it, which remains at the bottom of every experiment, whatever be the liquid operated on. Perhaps among our chemists there may be one who will take up the subject of boiling water as a special research.

New Paper Making Process.—We understand that a gentleman of this city has already successfully introduced many improvements in the manufacture of fibrous materials, by which it is claimed that one-half of the chemicals now used will be saved, and good stock may be made for less than six cents per pound. Paper makers will understand the importance of the saving in chemicals, which is one of the heaviest items of expenditure in in making paper stock. As yet nothing has been done to put the new process into practical operation, or even to test its merits, the time and attention of the inventor being absorbed by his other extensive operations. But the attention of printers, paper makers, and capitalists cannot fail to be drawn to any improved process which holds out a hope of again supplying cheap paper, and it is possible that we may soon see a revolution in paper manufacture.—*Boston Transcript.*

Good Milkers.—It is an easy matter to distinguish a good milker. The farther removed from the bull the better. As the male has no milking properties, and the female is devoted to them; and none so much as the cow; so we are to judge from this principle.

No person of ordinary intelligence would select a cow with thick neck, heavy bones, and a bull-like disposition. On the other hand, the true cow, the good milker, is easily known by its thin neck, sometimes almost amounting to deformity (the case with one of ours;) small bones; thin, sensitive hide; thin tail; and (most of all) a mild, placid disposition, showing absence of animal heat which consumes, or prevents milk from forming. A quiet, motherly face, denoting intelligence and domesticity, is what is wanted. The reservoir of milk, of course, must be large or there cannot be stored a large quantity. A large, well-formed bag, therefore is a necessity. A small udder is an invariable sign of a poor milker. The form and size of a cow are not always to be depended upon. The disposition is perhaps as much, if not more, than any other one point; some say than all other points.

New Application of Chloroform.—Some seamps administered chloroform to the hogs belonging to two citizens of North Bridgewater, and were about carting them away, when the noise of wheels alarmed the owners and the animals were thrown out and the thieves drove away. One of the hogs died of the dose of chloroform.

Mining in Tuolumne County.—A gentleman well acquainted with the mining interests of Tuolumne county, says that the quartz mines at American Flat, on the Stanislaus river, are yielding an enormous quantity of bullion. Nearly 2,000 ounces were taken out of these mines last week.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

Pulverising Ores.—Mr. Charles Pengilly has provisionally specified an invention, which consists in having a system of conical, tapering, or partly conical or partly tapering, crushing rollers, the largest diameter of these rollers to be at the bottom or exit end, in order that the open spaces between the rollers may be larger at the top or entrance place, where the stuff to be crushed is first introduced (of large reduced size), and may gradually decrease in size till at the bottom or exit; the rollers may be so close together that nothing but very fine particles can pass through, although the extent to which the opening shall be contracted must depend, of course, upon the fineness of the pulverising required. The pulverised material will pass through at the bottom or exit place, and can be from time to time removed therefrom. The rollers are intended to be corrugated in slanting lines or otherwise, and the slant of the corrugations of one roller should cross those of the rollers working against it, as thus x, whereby greater reducing power will be obtained; but near the bottom the rollers should, in many cases, be perfectly plain, and free from corrugations.

Hints by one who Knows.—Plants when drooping are revived by a few grains of camphor. Sulphur is valuable in preserving grapes &c., from insects. In feeding corn, sixty pounds ground goes as far as one hundred pounds in the kernel. Corn meal should not be ground very fine, it injures the richness of it. Turnips of small size have double the nutritious matter that large ones have. Rats and other vermin are kept away from grain by sprinkling garlic when packing the sheaves. Money expended in drying lands by draining or otherwise, will be returned with ample interest.

Professor N. S. Maskelyne exhibited, at a late meeting of the Geological Society, some beautiful specimens of a new mineral recently discovered in Cornwall, and which he proposes to term *Langite*, in honor of Professor Victor Von Lang, of the University of Gratz, and formerly of the department of mineralogy in the British Museum. It consists of basic sulphate of copper, insoluble in water, and is disposed as an incrustation upon very soft "killas" in masses of a rich blue color, accompanied by minute crystals belonging to the prismatic system.

Flame-proof or Non-Inflammable Fabrics.—The frequency of accidental death by burning, more especially since crinolines have been in fashion, has given rise to experiments in this country and in France to determine the best means of rendering dresses flame-proof. The most recent researches are by Westerman and Oppenheim, which show that solutions of the salts of sulphate of ammonia, phosphate of ammonia, and tungstate of soda, are those that can be used with greatest facility. For rendering tissues uninflammable these salts combine the conditions of cheapness, and harmlessness to the gloss color, and structure of the tissue. The solution may be used in the proportion of one third the weight of starch, or from fifteen to twenty per cent. of water. The tungstate of soda appears to have the advantage of the two other preparations, for with starch it forms a better stiffening, and is less liable to be decomposed by the smoothing iron.

Mechanics' Fair Daily Press.—Such is the title of a very neat quarto paper published at the Industrial Fair Pavilion, by Dewey & Co., of the *Mining and Scentific Press*. It will be published during the continuance of the Fair. It reflects great credit, as does the weekly, upon the enterprise and ability of the publishers. We want it regularly, also the engraving of the Pavilion.—*Reese River Reveille.*

Historical Wreck.—On the beach at the town and harbor of Monterey, California, lies the ribs of an old vessel with which is connected an event of interest. The remains of the wreck alluded to were once a portion of the brigantine Natalia, which carried Napoleon from the island of Elba to France, in 1815. Shortly after this occurrence the Natbalia came around Cape Horn to California, with a party of Spanish Colonists. After performing much coasting service, the vessel finally stranded in 1834, in the harbor of Monterey.

Manufacture of Plumbago Crucibles.—Mr. Thomas Vaughn, an English gentleman, proposes to purify the plumbago used in the manufacture of crucibles, by bringing the impure plumbago to a low red heat, in a close oven or retort. The iron is thus converted into a magnetic protocarbide, which is afterwards withdrawn by magnetic or electro-magnetic action.

Paint to Endure.—It is said that boiling coal tar with slacked lime, will make a shining surface on wood work, and walls of any kind, which is as imperishable as stone, and therefore valuable for out-houses, &c.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

San Francisco:
Saturday Morning, Sept. 24, 1864.

HOME FINANCES.

There is a slight tendency to greater ease in the money market and the demand is thought to be less active than for some time past. No abatement can be noted as yet, however, in the rates of interest but the abundance of capital and its continued accumulation may produce such a result at no distant day. Bank accommodations are still ruling at 1½ ₱ cent. per month on good short paper and other collateral security. Loans upon Mining Stocks are readily made at the same figures if the margin can be made satisfactory to the lender, by view of the unsteadiness in the market value of many of these shares a wide allowance is demanded for any depreciation that may take place. The mercantile classes are for the most part in a comfortable condition and do not require a heavy discount line at the present juncture. Most of them have pursued a conservative policy of late, selling few or no goods on credit and husbanding their resources generally.

Receipts of Treasure from the interior and the north coast during the past ten days have been unusually heavy and amount in the aggregate to some $2,300,000, nearly all of which was in Bullion and dust. The Branch Mint during this period has taken $650,000 of the above sum of coinage.

A fair business was done on steamer day in Eastern Exchange. Currency Bills were drawn on the Atlantic cities at 110@115 ₱ cent. premium on gold. Telegraphic transfers were sold at 5¼ and Drafts payable in coin at 3½.

Legal Tender Notes during the week advanced from 44½ to 46⅛ closing at about 46 with a rather free supply in the hands of dealers. Latest telegraphic advices from New York quote gold at 220@221.

EASTERN FINANCES.

Our commercial advices from the other side of the Continent, per mail, are down to the 23d ult. We note but little change in the aspect of commercial and financial affairs in Eastern markets. The tardiness with which the people were responding to the appeal of the Secretary of the Treasury, in the amounts which had thus far been subscribed to the new 7-30 currency loan, occasioned no little disappointment. A mischievous report was in circulation that Mr. Fessenden intended at an early day to resign his office, but there was doubtless no truth in the rumor. The movements in the general merchandise and produce markets, were quite insignificant. Prices had attained a point which restricted the consumption of even many commodities that were of prime necessity to all classes. The dry goods trade was reviving a little under the influence of orders from the country. An active business in any department of trade was not anticipated, however, at present, unless a further inflation of the currency was resolved upon. This would enhance prices and speculative buyers might enter the market again, as was their policy a short time since. Government securities had been sold to a considerable extent, the transactions embracing the old bonds, (chiefly the 5-20's) which had been freely taken by the Continental bankers on Wall street for foreign account.

REVIEW OF THE FAIR.

I. Price's Improved Portable Baling Press, a rapid and powerful machine, operated by a wheel and chain levers.

16. Paine's Improved Compound Lever Baling Press; a California Invention; patent applied for. A serviceable and most powerful machine.

227. Walton's Wine Press; power obtained from a compound of the lever, pulley, and wheel; a California invention, manufactured in Drytown, Amador county.

676. Halsted's Wine and Cider Mill, made and invented in California, by Mr. Halsted, and in daily operation at the Pavilion.

142. A Press for Wine and Cider, invented by Mr. J. Dean, of Sacramento county and patented in 1863.

13. Gage's Roller and Grain Drill, from Michigan. It drills, drops and covers as it is moved along. Exhibited by Z. Sikes, Santa Clara.

26. A Seed Planter and Cultivator, with which a boy and team can sow and cultivate fifteen acres per day. It sows the grain broadcast. A Wisconsin invention, exhibited by D. & H. A. Winter, of San Francisco.

45. Huie's Improved Gang Plow, a California invention, by H. R. Huie, of Alameda county. Seven important improvements over similar plows in use are noted in the inventor's circular.

47. Two Improved Whiffletrees, exhibited by Wm. Saunders. This invention is quite an important one and may be seen in division No. 46, near the carriages.

76. Improved Gang Plow; a California invention, by L. Hulloway of Gilroy. Patent applied for.

149. A Model of an Excavator, a California invention, by J. B. Barker, of San Francisco, designed for ditching and embanking.

205. Hunter's Grain Separator, an important California invention, by Andrew Hunter, of San Francisco. This Separator has proven one of the most effective machines of the kind in use, as is attested by numerous references to California ranchmen. Mr. Hunter has applied this principle, with various modifications, to the separation of the precious metals and sulphurets from quartz sand, both of which inventions, he exhibits at the Pavilion.

286. Jackson & Lamb's Sheep Shearing Machine, exhibited by Mr. F. B. Lamb, just to the right of the main entrance.

303. Sheep-marking Tongs, exhibited by C. H. Haine, of San Francisco.

462. Tiller and Pulveriser, by W. Wadsworth, Sacramento, Patentee. The important feature of this machine is a set of teeth or tines which follow the toothed roller, raising up and turning over the earth, which has first been broken up and loosened by the teeth on the roller.

487. A Beehive, by Mr. James Miller, of San Francisco. The speciality of this invention appears to be the beauty and finish of its workmanship, which renders it a fit ornament for even a parlor.

658. A Harvesting Machine represented by a working model, by C. A. Doe of San Francisco. This machine performs the triple operation of heading, threshing and separating the grain, as it moves.

677. Under this number J. D. Arthur & Son of San Francisco exhibits one of Seymour & Morgan's Reapers; a model Giant Reaper and four cast steel plows. The first mentioned is a splendidly finished machine and is highly approved in the Eastern States.

695. Hawley & Co., of San Francisco exhibit a Buckeye Mowing Machine, together with seven patent plows. The Mower has already harvested 200 acres this season.

700. Messrs. Jackson & Johnson, of Sacramento exhibits a working model of a Cotton Gin, which is daily being used to gin small lots of cotton grown upon their ranch on the Sacramento river.

Frank Abell was convicted yesterday for his recent "bust" up in the art gallery at the Pavilion. Prospects are that he will get off cheap.

[From the Daily Fair Press of Thursday.]

There is but little additional news by the telegraphic dispatches of this morning, further than a complete confirmation of the reports of Sheridan's grand victory, in the Shenandoah Valley, and furnishing additional particulars of its extent and importance.

Fremont has signified his intention to withdraw from the contest, and promises to shortly publish a letter on the subject.

The *Bulletin's* dispatches of to-day contain considerable news of interest from which we condense the following:

New York Sept. 21.—Reports to the daily papers report a heavy engagement as imminent in Virginia. Heavy skirmishing is going on on the Weldon Railroad, with much firing. Lee is reported to have but 40,000 men independent of Early's force, though he is endeavoring to withdraw Early for fear of Grant's swinging around on his flank.

The 205th Pennsylvania Sharpshooters left Philadelphia to-day for the front, 1,000 strong. Farragut's flagship, Hartford, is reported to have been blown up, by accident, while on her way North. Sheridan has chased Early near thirty miles since the late battle. The rebel Generals Rhodes, Raines, Gordon, Goodwin, Leroy, Bradley Johnson and Fitzhugh Lee, are said to have been killed in the Bunker Hill fight.

The number of prisoners taken amounts to near 5,000. The rebels will not make a stand this side of Staunton. It is rumored that the enemy attempted to turn our left flank last night.

The principle agent, and several of his accomplices, of the pirates on Lake Erie, are captured. A fight has taken place on the Little Black river, in Missouri, between the 3d Missouri Militia and Shelby. Our loss 20 killed and wounded. Other engagements are expected there soon, as several squads are gathered up in different places.

A collision occurred on the Pennsylvania railroad last night; six killed and many wounded.

Sherman has replied to Hood's charge of cruelty in a most masterly manner, leaving him but little chance for any retort.

Full accounts are given of Sheridan's fight, which show it to have been a hard fought, but most decisive battle and victory:

Fremont has concluded not to run the "woolly horse."

Gold, 222 @ 222½.

BOOKS! BOOKS! BOOKS!—Books on science, books of poetry, story books, ancient and modern history of all nations, books of travel and adventure by flood and field, books of fun, and books of wisdom, books on mines, minerals and metals, books for ladies, gentlemen, and children, for the house, the sea side, or the school, books for the soldier, sailor, and civilian, "the good book" and books that are not so good, books of all kinds, in all languages and on all subjects, may be obtained at all times, at the store of A. ROMAN & Co. Montgomery street, at the very lowest prices.

HOW TO CONDENSE MILK.—Place two quarts of new milk in a vessel over a slow fire, stir it to prevent burning, until it is about the thickness of cream, add one pound of sugar, a little at a time, stirring constantly till it becomes stiff and thick, then spread on plates and dry in the oven or sun, and powder it with a knife or spoon. It can be sent in papers to your friends in the army, if you please, or any where else, and serves for both milk and sugar when dissolved in coffee or tea. Let our dairywomen try it, and they will get the thanks of the "Sanitary" and the soldiers.

THE CHALLENGE ACCEPTED.—In our reporter's remarks on the Fair yesterday, reference is made to a proposed challenge, said to have been offered by Mr. Varney to test the capabilities of his amalgamating pans against any others at the Fair, for the sum of $1,000. We are requested by Mr. Farrand, the patentee of the Oscillating Amalgamator which bears his name, to state that if Mr. Varney is desirous to make such a trial, that he, Mr. Farrand is prepared to post the cash.—[*American Flag.*

[From The Daily Fair Press of Friday.]

The Bulletin's dispatches report more fighting in the Shenandoah Valley, an engagement having taken place on the hights near Strasburg. The rebels were driven from their position on Flint Hill and their cavalry forced back six miles beyond Front Royal. The Sixth Corps had 200 killed and wounded. A renewal of the battle is anticipated.

Grant's army is very jubilant over Sheridan's success. By Grant's recommendation, Sheridan has been promoted to a Brigadiership in the regular army. Wall street reports more peace propositions from Jeff Davis. Georgia is reproached, for thinking of peace, by the Richmond Enquirer.

Sherman has exchanged 2,000 prisoners with Hood. 17 of the rebel prisoners refused to return, and took the oath of the Union. A great fire has occurred at Providence, R. I. Gold 221—very quiet.

STOCK SALES TO-DAY.—Gould & Curry $1,180; Ophir, $355.

BOOK BINDING.—One of the most entertaining exhibitions at the Fair, is the display of the materials used in book binding, and specimens of that work in the various stages of its progress, from the loose sheets to the magnificently gilt bible or heavy ledger. This interesting and important branch of our local manufactures is carried on most extensively by E. Bosqui & Co., 514 Clay street. Those beautiful specimens at the Fair are from this establishment—where every description of book work is done to perfection, a number of curious machines being employed, to fold, cut, press, number or rule the paper, and other substances used, by means of which, and other facilities, Bosqui & Co. are able to defy competition, in price or excellence of workmanship. Merchants, shipowners and incorporated companies, will obtain to advantage superior books for their offices from Bosqui & Co., 514 Clay street.

ENTOMBMENT.—The ceremony of the formal entombment of the remains of Rev. T. Starr King, were conducted on Thursday evening in the chapel "garth," or yard adjoining the First Unitarian Church, on Geary street. The remains, enclosed in a suitable burial case were placed in a marble Sarcophagus of massive and appropriate construction, upon which running entirely around its upper edge, is the following inscription: "Rev. Thos. Starr King, Pastor of the First Unitarian Church, San Francisco, born Dec. 16, 1824, died March 4, 1864." The ceremonies were conducted by Rev. Mr. Stebbins and Dr. Bellows. The sarcophagus formed a very conspicuous object to the passers by on the street.

Catalogue of the Exhibition.

This work, which has been attended with all the annoyances and hindrances usual to the publication of such articles, is now ready for the use of the public, who, we doubt not, will more highly appreciate its contents for the correctness gained by its delay. It is published by the authority and under the supervision of the Managers of the Fair, who have labored diligently with ourselves to present an excellent catalogue. Exhibitors have, in many instances, been careless in the description of articles, and heedless in having them entered in proper season, and from this fact alone has arisen the delay in its publication, and all slight errors and omissions which may have occurred.

Communication.

EDITORS OF DAILY PRESS:—The "Challonge" reported in your issue of yesterday, was never made or authorized to be made by me. I never bet. I freely admit that I have claimed and I still claim that my amalgamator is superior to any other in use, and am ready and anxious to have it submitted to a fair trial with any one or more now on exhibition at the Fair.

I am willing that the trial shall be made under the direction of the Committee on Mining Machinery already appointed; or by such other person or persons as myself and the other contestants may agree upon.

THOMAS VARNEY.

Zenith, Calaveras co., 50c	Sep 17—Oct 3

Those marked with an asterisk (*) are advertised in this journal.

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—Eds. Press.]

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

CLOSE OF THE FAIR.—As already noticed the Fair will close on Saturday, the 1st of October, after which the Pavilion will be emptied of its contents and preparations made for a grand Promenade Concert and Ball, which will be given at the Pavilion, on or about the 10th of October. On that occasion the Art Galleries will be turned into supper rooms, the restaurant into a ladies' dressing chamber, and there will be a large string band and a brass band of fifty piecee. The Pavilion will be handsomely decorated for the occasion, and it is expected that five or six thousand people will be present.

COMMITTEES OF AWARD.

The following is a list of Committees of Award, and the date of their election by the Exhibitors of the various classes, or as appointed by the Executive Committee on account of the failure of Exhibitors to elect.

September 13, 1864.

On Cabinet Work: W. P. Taylor, J. Ross, C. Rechter.

On Upholstery: Ackerman, Neppart, E. Blezman.

On Billiard Tables: Moulin, Haight, Aug. Russ, S. Hermann, W. Thompson, Jr.

On Carriages and Buggies: Woodside, Shute, R. S. Eells.

September 14th.

Music and Musical Instruments: On Pianos—E. Hartman, G. A. Scott, R. Herrold. On other Instruments—G. Koppitz, D. Finn, F. Medina, Geo. Cocs, M. Simonsen, M. Y. Ferrer.

On Waxwork: M. F. Butler, G. W. Bell, P. Mezzara.

September 15th.

On Leather and its Manufactures: Boots and Shoes—J. R. Hughee, J. Fogarty, W. F. Burke. Saddlery—W. H. Buxter, J. C. Johnson, H. Judge. Trunke—E. Uber, R. Dowling.

Belting and Hose: A. C. Austin, E. Wilson, F. E. R. Whitney.

September 19th.

Paper and its Manufacturee: D. H. Ball, Emerson, Thompson, Jamce Linen.

September 20th.

Wool and its Manufactnres: S. Hermann, C. H. Harrison, A. Austin, G. F. Walter.

Wool and Wool Samplee: Dr. Tuthill, C. J. Dempster, John McAllister.

Wool Packages: C. P. Lolor, A. B. Forbes.

Mens' and Boys' Clothing: F. Elwell, E. Boucher, Charles Boyes, L. Schweinle.

September 21st.

Stoves and Hardware: J. De La Montagna, J. Gordon, G. Snook.

Miuing Machinery: O. Belden, Kellogg, (of K. Hewston & Co.,) W. Garratt, H. P. Wakelee, O. Gori, G. H. Johnson, J. Brodie.

Manufacturing Machinery and Steam Enginc: W. McKibbin, W. Schmolz, Jas. Moore, C. C. Bemis.

Hydraulic, Hydrostatic, Pneumatic Engines, Turbines, Fire Engines, Pumps, Windmills, etc.: Jas. Moore, F. J. Hughes, W. Garratt, A. C. Austin, G. V. Huerne.

Marble Mantels: Crane, P. J. O'Connor, W. Patton.

Sculpture: C. Gori, T. Hill, J. B. Wandesford, F. Arriola, P. Tofft.

Cooperage: John Breen, Geo. Enkel, Wm. Gun.

September 16th.

Dentistry: Dr. C. E. Blake, Dr. R. E. Cole, Dr. Austin.

Dental Apparatns: Mr. Schenk, Rev. Mr. Strong.

Trusses, Etc: Dr. A. J. Bowie, Dr. Regenberger, Dr. A. F. Sawyer, Dr. W. Hammond.

Cutlery: Dr. A. F. Sawyer, Col. J. W. McKeuzie, I. Ward Eaton.

Agriculture: Mr Garrett, Mr. Hungerford, D. L. Perkins, Geo. Humphrey, James Lick.

Military Goods: Charles Main, A. Jackson, A. G. Abell.

Furs, Etc: C. T. Blake, Mr. Burkard, W. Burling.

September 17th.

Arms and Amunition: Firearms—W. H. Brown, Nutting, Wessinger, P. B. Comins. Powder—A. J. Plate, R. Liddle.

Signs, and Ornamental Sign Painting: F. L. Jones, F. Nutz, G. D. Wyman.

Thursday, September 22d.

On California Wines: J. Cody, S. W. Inge, C. R. Bond, N. Luning and L. J. Czapkay.

On California Liquors: J. Cody, I. Rowell, W. H. Keith, L. J. Czapkay.

On California made Safes: W. Hartman, A. Auberlin, and F. Marks.

On Domestic Preparations: Pickles, Preserves, Jellies, etc.—G. D. White, S. B. Goddard, and Chas. Bowen.

On Ships, Boats, Models, and Naval Storee: Capt. W. Irelan, Capt. J. B. Thomas, and Capt. T. W. Batchelder.

Committee on Architectural and Mechanical Drawing and Penmanship: T. Grob, W. Marsh, V. Squarza.

FINE CLOTHING.—At the establishment of E. C. Dake, 540 and 541 Washington street, is to be found the finest eastern made clothing, and one of the largest assortmente of gentlemen's furnishing goods in the city, at prices to suit the times.

DONORS TO THE PAVILION.

It will be interesting to our readers, and all who feel a pride in our present Industrial Exhibition, to learn the namee of those who promptly responded to the solicitation of the projectore of the enterprise in its early developments, while the assurances of success were very dim; we therefore deem it just to the public to bring forward the following list of those who, as it were, placed their shoulders to the wheel and inaugurated the grand movement, by subscribing the several amounts opposite their names for the purpose of erecting the magnificent structure in which we are to-day assembled.

Joseph Britton	$250 00
A. S. Hallidie	250 00
Ed. Nunan	250 00
Jas. A. Pritchard	250 00
H. F. Williams	250 00
W. H. Knight	250 00

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press
COMMENCED
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal xperience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,
An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

W. W. HANSCOM,

Steam and Mechanical Engineer, Designs furnished and Drawings made for Engines, Mills, Water Wheels, Mining Machinery, etc., etc. Agent for McKenzie's Patent Cupola and Blower.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ JACOB SHEW.

A person in every way qualified desires a situation as Superintendent for some Company working in Mexico. Is a first class Assayer and Metallurgist and can give the best of references. Address, Mexico, Lock Box 2113 P. O. San Francisco. *qy3t

MINERS' MEASUREMENT OF WATER.

The unsettled state of the question of what should constitute a "miners' inch" of water, has caused much controversy and no little inconvenience and loss among manufacturers of mining machinery, and among buyers and sellers of water, throughout the State and adjoining territory. Efforts have been made to effect legislative action upon the subject, in order to produce a uniform rule of measurement, but hitherto without effect. The miscellaneous and uncertain mode of measurement is still in vogue. Some companies measure six inches from the top, others six inches from the center and others still six inches from the bottom of the aperture. Whatever rule may be decided on, it must, like the horse power, which it required so long a time to establish, be one of an arbitrary character. We would call the especial attention of miners and others interested, to the following action had at the Mechanics' Pavilion, on Wednesday, the 21st inst. and would suggest that it be accepted, by general consent, as a finality, and that our next Legislature put upon it the stamp of a legal enactment. It will be observed that a six inch pressure measured from the centre of a two inch aperture, with a constant supply, to the guage box, is deemed the fairest standard, and is in harmony with the rule suggested below :—

At a meeting of persons interested in mining and mining machinery, held at the Mechanics' Fair Pavilion, on Wednesday, Sept 21st, 1864, a discussion arose as to the necessity of having some standard as to what should constitute a miners' inch of water. It was finally agreed (without regard to what ditch companies may sell as an inch of water) that in calculations for the construction of machinery, a miners' inch of water shall equal the amount of water that will pass through an opening one inch square, under a pressure of six inches, measured from the center of the orifice ; or a body of water 336 feet long and one inch square, the amount which will pass through said orifice in a minute ; or 145 86-100 lbs of water passing a given point in a minute ; or 17 4054-10000 U. S. standard gallons of water passing a given point in a minute ; or 2 333-1000 cubic feet of water passing a given point in a minute.

The Immigration of 1864.—A gentleman writing from Ruby Valley, under date of August 31st, says: I never in my life saw so many poor immigrants; their poor apologies for teams, no provisions, no money ; many are sick, and many have buried one or more members of their families. An unusual number of accidents have happened from too careless handling of firearms Mr. Nichols, of Marengo, Illinois, had a son fifteen years old killed ; a little girl, fourteen years old, had her arm entirely shot off ; and several other persons have been maimed in various other ways. I cannot see where all these people are going to locate ; California will get the largest share ; some will go to Oregon, and some will go to any place where they can earn a livelihood for themselves and their families.

Gun Cotton Redivivous.—The friends of gun-cotton are pressing its advantages over gunpowder very actively. Its weight is only one-sixth that of gunpowder. It produces no smoke ; it does not foul ; it does not heat. With but one-fourth the weight of a gunpowder charge it gives equal initial velocity, and in shells one-third of the weight produces double the explosive force. Time, damp and exposure do not alter its qualities.

How to Protect Dried Fruit from Worms.—It is said that dried fruit put away with a little sassafras bark (say a large handful to a bushel) will keep for years, unmolested by those troublesome insects, which so often destroy hundreds of bushels in a season. The remedy is cheap and simple.

Do not make mouths at the public because it does not accept you at your own fancied valuation. Do the best you can, bide your time with patience, and if there is anything in you it will work its way to the surface.

Wool.—The wool crop of Tehama county says the *Independent*, will be the largest this fall of any fall clip since the county was organized. There are several thousand more sheep in the county than has been at any former season, and the fleeces are more than an average.

The Maori War which has been so long waged by the English against the aboriginees is at an end, and the Maoris, of New Zealand, have been effectually subdued.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

By FRONTIER & DEVIERCY.
437 Pine Street, San Francisco.
au31tf.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

no30-tf San Francisco.

AN ORIGINAL MODE OF ADVERTISING.—It will be seen from the advertisement of the Florence Sewing Machine Co., in another column, that they give the names and places of business of their principal competitors in the sewing machine line, and urge those seeking a perfect machine to avail themselves of this list in making their selection. Nothing can be fairer or more liberal than this, and it shows conclusively that the Florence company *do not fear the result of a comparison of their machines with others*. If a little more of this spirit was evinced by our merchants the public would be the gainer. *We hope they have not patented the style.* *

Programme of the Fair.

Until further notice the Pavilion will be open for the admission of visitors

At 9 o'clock A. M., every day except Sundays.

San Francisco, May 10th, 1864. 20

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

(Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete Index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

GREAT TRIUMPH
—OF THE—
FLORENCE!

We, the undersigned, have each purchased a FLORENCE SEWING MACHINE and have them now in use.

We have thoroughly tested them on work of all grades—heavy, medium and light—and our opinion is that the Florence is durable, will not easily get out of order, is strong and simple in construction, and its use is easily learned by the most inexperienced.

It will do a greater range of work, with less trouble and change, and we consider it altogether better than any other Family Sewing Machine we have ever seen:

Mrs. Dr. Chase, 31 Turk street, S. F.
